If construction activities must occur during the breeding season, pre-construction surveys to determine if least Bell's vireo occurs within 300 feet of project construction will occur once a week for three consecutive weeks within the breeding season, with the last visit no more than 3 days prior to commencement of construction activities. The preconstruction survey visits will be conducted by a qualified biologist familiar with songs, whisper songs, calls, scolds, and plumage characteristics of adult and juvenile vireos. Surveys will be conducted between dawn and 11:00 am. Surveys will not be conducted during periods of excessive or abnormal cold, heat, wind, rain, or other inclement weather that individually or collectively may reduce the likelihood of detection. Surveys will not cover more than 3 linear kilometers (2 miles) or more than 50 hectares (123 acres) of habitat on any given day. Prior to performing the preconstruction surveys, a map will be created illustrating the least Bell's vireo habitat and all detections of least Bell's vireo will be mapped and tracked.

Directly following the preconstruction surveys, weekly clearance surveys will be performed following the same methodology stated above for the preconstruction surveys. Again, all detections of least Bell's vireo are to be mapped with behavior tracked across detections/sightings. The qualified biologist must have experience with nesting ecology and behavior of least Bell's vireo to determine pre-nesting/nesting behavior. The MSHCP does not provide "take" of least Bell's vireo, which includes negatively modifying foraging and nesting behavior. If at any time it is determined by the

qualified biologist that construction activities are negatively affecting least Bell's vireo, including modification of behavior, work will be halted and CDFW and USFWS will be contacted on next steps.

Daily noise monitoring will be required during the breeding season. A qualified biological monitor must be present to measure noise levels at the edge of all suitable habitat and work shall cease if, at any time, noise levels exceed 60 dB due to construction activities, or the existing ambient level if that is over 60 dB. Noise monitoring will continue throughout the breeding season or until construction activities have halted within 300 feet of least Bell's vireo habitat. CDFW and USFWS can be contacted on next steps if the project is not able to reduce the noise. For areas where preconstruction ambient noise levels exceed 60 dB, pre-construction, ambient noise measurements can be taken by a qualified entity during the full daylight period (sunrise to sunset), and subsequently determine the median average ambient noise level that can be used as the baseline in lieu of 60 dB. For projects that need to perform nighttime construction activities, the same would be done as above but with measurements taken during the full nighttime period (sunset to sunrise).

Although not required, for some projects it may be useful to construct a temporary noise wall between the construction area and the habitat to maximize avoidance of indirect effects to least Bell's vireo and reduce potential for project halts. The preconstruction and clearance surveys will still be required to ensure full avoidance has been met by the project during the least Bell's vireo breeding season unless USFWS and CDFW have confirmed in writing that such surveys are not necessary.

Southwestern Willow Flycatcher

Because SWFL is not present within the riparian bird study area, no avoidance, minimization, or mitigation measures are required under the MSHCP.

Burrowing Owl

No burrowing owls were found during focused surveys; however, because burrowing owls are highly mobile, prior to Project construction, **AS-2 (NES BIO-25)** will be required to avoid direct impacts on burrowing owls. Because burrowing owl is a covered species under the MSHCP and direct impacts would be avoided, no compensatory mitigation is required.

AS-2 (NES BIO-25). Burrowing Owl Management Plan. A Burrowing Owl Management Plan will be prepared by a qualified biologist and will include:

a) Focused Survey for Burrowing Owl: Include within the plan the results of the MSHCP protocol survey conducted. The survey results shall be no more than 3 years old. The survey shall be performed according to the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area (Survey Instructions).

b) Preconstruction Survey for Burrowing Owl: Surveys by a qualified biologist shall be conducted in areas containing burrows and/or suitable habitat for burrowing owl

within 14 days prior to ground disturbance, following the survey instructions in the "Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area." The Biological Study Area (BSA) shall be the LOD and a 500-foot BSA.

c) Protocol for Presence: Take steps necessary for addressing the presence of burrowing owl (if found during either of the two surveys), which shall include proper take authorization and include full avoidance, if feasible, or passive relocation by a qualified biologist.

d) Agency Approval: The plan will need approval by USFWS and CDFW. Additional approval of the plan will be required by RCA if RCA-owned lands are involved.

Tricolored Blackbird

Vegetation clearing would be performed outside of the active breeding season for this species (see Avoidance and Minimization Measure **NC-1 [NES BIO-1]** in Section 2.4.1, *Natural Communities*); as such, no direct impacts on eggs, nestlings, or nesting adults are anticipated. Avoidance and Minimization Measures **NC-2 (NES BIO-2)** through **NC-14 (NES BIO-14)** in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*, will reduce degradation of suitable tricolored blackbird habitat occurring adjacent to the disturbance footprint during construction. Avoidance and Minimization Measure **NC-18 (NES BIO-20)** will maintain functional movement through Temescal Wash and Avoidance and Minimization Measure **NC-19 (NES BIO-24)** will avoid attracting predators to or near the Project site during construction (in Section 2.4.1, *Natural Communities*), thereby minimizing Project-related predation of tricolored blackbird. Avoidance and Minimization Measure **AS-5 (NES BIO-28)** in Section 2.4.4, *Animal Species*, ensures that no breeding individuals would be directly harmed during Project construction. Nesting bird surveys will be completed, and no active nests will be disturbed. These measures are sufficient to ensure that impacts on tricolored blackbird will be minimized and avoided per the requirements of the MSHCP.

Full mitigation of potential direct and indirect impacts on tricolored blackbird would be provided through consistency with the MSHCP. The inclusion of Avoidance and Minimization Measures, along with all other measures provided in this document, provides full consistency with the MSHCP for tricolored blackbird. No additional measures or mitigation beyond those required by the MSHCP would be necessary.

Coastal California Gnatcatcher

Avoidance and Minimization Measure **NC-1 (NES BIO-1)** (in Section 2.4.1, *Natural Communities*) will ensure that potentially occupied coastal California gnatcatcher habitat will not be removed during the species' core breeding season (it can be removed if preconstruction surveys confirm the species is absent). Measures **NC-2 (NES BIO-2)** through **NC-11 (NES BIO-11)** in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*, will reduce the potential degradation of coastal California gnatcatcher habitat adjacent to

the disturbance footprint during construction. Avoidance and Minimization Measure **NC-19 (NES BIO-24)** in Section 2.4.1, *Natural Communities*, will avoid attracting predators to or near the Project site during construction, thereby minimizing Project-related predation of coastal California gnatcatcher. Avoidance and Minimization Measure **AS-5 (NES BIO-28)** in Section 2.4.4, *Animal Species*, is a nesting bird management plan.

Full mitigation of potential direct and indirect impacts on coastal California gnatcatcher would be provided through consistency with the MSHCP. The Avoidance and Minimization Measures, along with all other measures provided in this document, provides full consistency with the MSHCP for coastal California gnatcatcher. During formal Section 7 consultation, USFWS performed a review of the Project's consistency with the MSHCP that resulted in the issuance of a streamlined biological opinion, which was received on September 9, 2025. A copy of the biological opinion is included in Chapter 4. No additional measures or mitigation beyond those required by the MSHCP would be necessary.

Stephens' Kangaroo Rat

There are no specific avoidance measures required for SKR under the MSHCP; however, Avoidance and Minimization Measures **NC-2 (NES BIO-2)** through **NC-12 (NES BIO-12)**, **NC-18 (NES BIO-20)**, and **NC-19 (NES BIO-24)** in Section 2.4.1, *Natural Communities*, Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*, and Avoidance and Minimization Measure **TE-4** below will minimize potential direct and indirect effects on SKR and its suitable habitat during construction. These measures are consistent with general MSHCP avoidance and minimization requirements for covered projects.

Full mitigation of potential direct and indirect impacts on SKR would be provided through consistency with the MSHCP and compliance with the SKR HCP. Implementation of the avoidance and minimization measures, along with all other measures provided in this document, provides full consistency with the MSHCP for SKR. During formal Section 7 consultation, USFWS performed a review of the Project's consistency with the MSHCP and issued a streamlined biological opinion, which was received on September 5, 2025. A copy of the biological opinion is included in Chapter 4.

TE-4. Stephens' Kangaroo Rat. To avoid and minimize effects on SKR and associated habitat, RCTC will implement the following:

- Payment of the SKR HCP fee.
- Monitor and report on compliance with the established take threshold for all SKR habitat associated with the Project. A biological monitor will track and identify SKR habitat that is subject to disturbance. Once the biological monitor has determined that permanent and temporary impacts on SKR habitat has reached 80 percent of the anticipated disturbance (192.1 acres), the biological monitor will map all potential SKR habitat disturbed with a sub-meter global positioning system weekly.

- Reports, including geographic information system files, will be submitted to USFWS at the end of every week until ground disturbance has occurred in all planned areas.

San Bernardino Kangaroo Rat

There are no specific avoidance measures required for SBKR under the MSHCP; however, Avoidance and Minimization Measures **NC-2 (NES BIO-2)** through **NC-12 (NES BIO-12)**, **NC-18 (NES BIO-20)**, and **NC-19 (NES BIO-24)** in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*, will minimize potential direct and indirect effects on SBKR and its suitable habitat during construction. These measures are consistent with general MSHCP avoidance and minimization requirements for covered projects.

Full mitigation of potential direct and indirect impacts on SBKR would be provided through consistency with the MSHCP. Implementation of the avoidance and minimization measures, along with all other measures provided in this document, provides full consistency with the MSHCP for SBKR. During formal Section 7 consultation, USFWS performed a review of the Project's consistency with the MSHCP, resulting in a streamlined biological opinion, which was received on September 9, 2025. A copy of the biological opinion is included in Chapter 4. No additional measures or mitigation beyond those required by the MSHCP would be necessary.

Mountain Lion

There are no specific avoidance measures required for mountain lion under the MSHCP; however, Avoidance and Minimization Measures **NC-2 (NES BIO-2)** through **NC-12 (NES BIO-12),** and **NC-19 (NES BIO-24)** (in Section 2.4.1, *Natural Communities*) would minimize potential effects on suitable mountain lion habitat during construction. Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*, would reduce potential indirect impacts on mountain lion movement during construction and Avoidance and Minimization Measure **NC-18 (NES BIO-20)** would maintain undercrossing functionality at the Temescal Wash during construction. These measures are consistent with general MSHCP avoidance and minimization requirements for covered projects.

Full mitigation of potential direct and indirect impacts on mountain lions would be provided through consistency with the MSHCP. Implementation of the avoidance and minimization measures, along with all other measures provided in this document, provides full consistency with the MSHCP for mountain lions. No additional measures or mitigation beyond those required by the MSHCP would be necessary.

2.4.6 Invasive Species

2.4.6.1 Regulatory Setting

On February 3, 1999, President William J. Clinton signed Executive Order (EO) 13112 requiring federal agencies to combat the introduction or spread of invasive species in the U.S. The order defines invasive species as "any species, including its seeds, eggs, spores, or other biological material capable of propagating that species, that is not native to that ecosystem whose introduction does or is likely to cause economic or environmental harm or harm to human health." FHWA guidance issued August 10, 1999 directs the use of the State's invasive species list, maintained by the California Invasive Species Council to define the invasive species that must be considered as part of the NEPA analysis for a proposed project.

2.4.6.2 Affected Environment

Unless otherwise noted, the information from this section is based upon the September 2023 Natural Environment Study (NES) prepared for the Project (Caltrans 2023).

Nonnative invasive plants invade natural communities in California and can outcompete and displace native plants that many native wildlife species depend on for food and cover. Invasive plants are a leading cause of declines in native plant and animal numbers, and are a factor in federal Endangered Species Act listings. They also increase wildfire and flood danger and diminish productive rangeland and timberland. Nonnative invasive animal species compete with native wildlife for limited resources and have the potential to displace, remove resources for, or consume native wildlife and can lead to population declines and potentially extinction of native plants and animals, lower biodiversity, and altered habitats for considerable time periods.

During the field surveys conducted for the Project, all plant species observed were recorded, and a list was compiled. Included in the floral list are species classified as invasive by the California Invasive Plant Council (Cal-IPC) as High, Moderate, or Limited on the Cal-IPC plant inventory.

Exotic plant species exist within the nonnative plant communities, as well as within patches of native plant communities, landscaped areas, and in areas that have been disturbed by human uses throughout the Biological Study Area (BSA). Exotic species are typically more numerous in disturbed and ruderal areas. Based on the Cal-IPC classification, 40 species of plants observed within the BSA are classified as invasive exotic plant species (Table 2.4.6-1). Six of these are ranked as high, 18 as moderate, and 16 as limited. Invasive species that have severe ecological effects are given a rating of High by Cal-IPC.

Table 2.4.6-1. Cal-IPC Classified Invasive Species Observed within the BSA

Scientific Name	Common Name	Cal-IPC Rating
Arundo donax	Giant reed	High
Bromus madritensis ssp. *rubens*	Red brome	High
Centaurea solstitialis	Yellow starthistle	High
Oncosiphon piluliferum	Stinknet	High
Tamarix parviflora	Smallflower tamarisk	High
Tamarix ramosissima	Saltcedar	High
Ailanthus altissima	Tree of heaven	Moderate
Avena barbata	Slender wild oat	Moderate
Avena fatua	Wild oat	Moderate
Brassica nigra	Black mustard	Moderate
Bromus diandrus	Ripgut grass	Moderate
Centaurea melitensis	Tocalote	Moderate
Cynodon dactylon	Bermuda grass	Moderate
Festuca myuros	Rattail fescue	Moderate
Festuca perennis	Rye grass	Moderate
Ficus carica	Edible fig	Moderate
Hirschfeldia incana	Shortpod mustard	Moderate
Hordeum murinum	Wall barley	Moderate
Lythrum hyssopifolia	Grass poly	Moderate
Myoporum laetum	Ngaio tree	Moderate
Nicotiana glauca	Tree tobacco	Moderate
Oxalis pes-caprae	Bermuda buttercup	Moderate
Schinus terebinthifolius	Brazilian pepper tree	Moderate
Washingtonia robusta	Mexican fan palm	Moderate
Bromus hordeaceus	Soft chess	Limited
Cotula coronopifolia	Brass-buttons	Limited
Erodium cicutarium	Redstem filaree	Limited
Eucalyptus camaldulensis	Red gum	Limited
Eucalyptus globulus	Blue gum	Limited
Medicago polymorpha	California burclover	Limited
Mesembryanthemum nodiflorum	Slender-leaved ice plant	Limited
Olea europaea	Olive	Limited
Raphanus sativus	Radish	Limited
Ricinus communis	Castorbean	Limited
Robinia pseudoacacia	Black locust	Limited
Rumex crispus	Curly dock	Limited
Salsola tragus	Prickly Russian thistle	Limited

Scientific Name	Common Name	Cal-IPC Rating
Schinus molle	Pepper tree	Limited
Schismus barbatus	Mediterranean schismus	Limited
Sisymbrium irio	London rocket	Limited

Source: Cal-IPC 2021

Seven nonnative and/or invasive wildlife species were observed (not including domestic animals) and documented within the BSA during field studies. Table 2.4.6-2 summarizes the invasive wildlife detected within the BSA.

Table 2.4.6-2. Invasive Wildlife Species Observed within the BSA

Scientific Name	Common Name
Procambarus clarkii	Red swamp crayfish
Lithobates catesbeianus	American bullfrog
Xenopus laevis	African clawed frog
Columba livia	Rock pigeon
Passer domesticus	House sparrow
Streptopelia decaocto	Eurasian collared-dove
Sturnus vulgaris	European starling

2.4.6.3 Environmental Consequences

Invasive plant and animal species are known for their propensity to invade and negatively affect natural ecosystems. Seeds of invasive plant species can be transported to natural open space areas through a variety of mechanisms such as wind, wildlife, vehicles, imported soils, and landscaping. Recurring fires can encourage the establishment of colonial invasive species, as can some forms of routine land disturbance (e.g., disking, fire breaks). Invasive plant species can have profound impacts on native vegetation communities, removing or diminishing the value of required habitat for native plants and animals. Invasive animal species may dominate habitat otherwise available to native species and may prey on native species, which can have substantial effects on native wildlife populations. Therefore, a need exists to identify and recommend measures that avoid and/or reduce further transport of invasive species into natural open space areas. Because this Project has a federal nexus, EO 13112 is applicable and the Project must comply with its requirements, which state that federal agencies are required to prevent the introduction and spread of invasive species and to support efforts to eradicate and control invasive species that are established.

Build Alternative (Preferred Alternative)

Temporary Impacts

Any impacts resulting from the introduction of invasive species, should they occur, are considered permanent impacts and are discussed under the *Permanent Impacts* heading below.

Permanent Impacts

The Project is expected to disturb the ground and remove both nonnative and native vegetation. During construction activities, construction vehicles may transport invasive plant species from past work sites to the BSA, or between work areas within the Project limits of disturbance. Post-construction bare ground can serve as a breeding ground for invasive plant species. There is potential for adverse effects on natural open spaces from the introduction of invasive species, and potential impacts could be severe. However, Avoidance and Minimization Measures **NC-2 (NES BIO-2)**, **NC-3 (NES BIO-3)**, **NC-5 (NES BIO-5)**, **NC-10 (NES-BIO-10)**, **NC-12 (NES-BIO-12)**, **NC-14 (NES BIO-14),** and **JPR-1** and Mitigation Measure **NC-17 (NES BIO-17)** in Section 2.4.1, *Natural Communities*, would reduce any potential indirect impacts from the introduction of invasive species during construction of the Project, which would be expected to have minimal effects on biological resources.

In compliance with the EO 13112 and guidance from the Federal Highway Administration (FHWA), the landscaping and erosion control included in the Project would not use species listed as invasive. None of the species on the California list of invasive species is used by the California Department of Transportation for erosion control or landscaping. All equipment and materials would be inspected for the presence of invasive species and cleaned if necessary. In areas of particular sensitivity, extra precautions would be taken if invasive species are found in the construction areas or in the right of way. These include the inspection and cleaning of construction equipment and eradication strategies to be implemented should an invasion occur.

No-Build Alternative

Under the No-Build Alternative, the Project would not be implemented. Therefore, there would be no new or additional impacts related to the introduction of invasive species to open space beyond those that would be expected to occur from the existing facility.

2.4.6.4 Avoidance, Minimization, and/or Mitigation Measures

To ensure that the Project does not promote the introduction of invasive species to open space within the BSA, Avoidance and Minimization Measures **NC-2 (NES BIO-2)**, **NC-3 (NES BIO-3)**, **NC-5 (NES BIO-5)**, **NC-10 (NES-BIO-10)**, **NC-12 (NES-BIO-12)**, **NC-14 (NES BIO-14)** and Mitigation Measure **NC-17 (NES BIO-17)** described in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **JPR-1** below would be implemented for the Project.

JPR – 1. Invasive Species/Upland Temporary Impacts Measure. For the duration of construction, any lands disturbed and left bare (i.e., not under active ground disturbance) for a period of 30 days or greater will be inspected by a qualified biologist for growth of non-native plant species listed as Moderate or High by the California Invasive Plant Council (Cal-IPC) (e.g., stinknet [*Oncosiphon pilulifer*], tocalote [*Centaurea melitensis*]). If detected, these species, with the exception of non-native grasses, shall be removed by a qualified landscape contractor with experience in native ecosystems by mechanical means (e.g., mowing, string trimming) or application of herbicide by a California licensed applicator within 5 days of detection. These removal

efforts will focus on removal prior to seed setting/development. All material from species with a Cal-IPC rating of Moderate or High will be bagged, removed, and disposed of off site.

Areas containing vegetation proposed as temporary impacts will be returned to pre-project or better condition upon completion of construction. A native seed mix appropriate to the vegetation community being impacted will be developed by a qualified biologist and reviewed and approved in writing by the RCA. Hydroseeding will occur during the first fall (September through October) following the completion of construction and would be subject to non-native plant control methods outlined above if left bare for a period of 30 days or greater prior to hydroseeding. The hydroseed mix must avoid use of invasive, non-native plant species listed in Table 6-2 of the MSHCP. These areas will be inspected by a qualified biologist for growth of non-native plant species listed as Moderate or High by Cal-IPC on a quarterly basis (June through January) and monthly during the growing season (approximately February through May) following hydroseeding. All species listed as Moderate or High by Cal-IPC will be removed following the methods outlined above. Maintenance/monitoring will cease once the absolute cover of native species reflect pre-project condition and absolute cover of vegetation within the temporary impact areas are equal to or better than pre-project condition. A memo will be provided to the RCA demonstrating completion (including photographs). These activities will be included in and implemented as part of the project construction schedule.

This page intentionally left blank.

2.5 CUMULATIVE IMPACTS

Please note: Council on Environmental Quality (CEQ) NEPA Implementing Regulations that were contained in 40 Code of Federal Regulations 1500 et seq have been removed. Included in the removal was Section 1508, which defined cumulative impacts. However, consideration of cumulative impacts was included in the analyses for the Draft Environmental Document, prior to the removal of the CEQ regulations, and therefore has been retained in the Final Environmental Document for informational purposes only.

2.5.1 Regulatory Setting

Cumulative impacts are those that result from past, present, and reasonably foreseeable future actions, combined with the potential impacts of the Project. A cumulative effect assessment looks at the collective impacts posed by individual land use plans and projects. Cumulative impacts can result from individually minor but collectively substantial impacts taking place over a period of time.

Cumulative impacts on resources in the Project area may result from residential, commercial, industrial, and highway development, as well as from agricultural development and the conversion to more intensive agricultural cultivation. These land use activities can degrade habitat and species diversity through consequences such as displacement and fragmentation of habitats and populations, alteration of hydrology, contamination, erosion, sedimentation, disruption of migration corridors, changes in water quality, and introduction or promotion of predators. They can also contribute to potential community impacts identified for the Project, such as changes in community character, traffic patterns, housing availability, and employment.

The California Environmental Quality Act (CEQA) Guidelines Section 15130 describes when a cumulative impact analysis is necessary and what elements are necessary for an adequate discussion of cumulative impacts. The definition of cumulative impacts under CEQA can be found in Section 15355 of the CEQA Guidelines. A definition of cumulative impacts under the National Environmental Policy Act (NEPA) can be found in 40 Code of Federal Regulations (CFR) Section 1508.7.

2.5.2 Methodology

The cumulative impact analysis methodology utilized was based on the eight-step process set forth in the California Department of Transportation (Caltrans) Standard Environmental Reference Guidance for Preparers of Cumulative Impact Analysis (Caltrans 2005). The eight-step process is as follows:

- Identify resources to be analyzed.
- Define the study area for each resource (i.e., Resource Study Area [RSA]).
- Describe the current health and historical context for each resource.

- Identify direct and indirect impacts of the proposed project.
- Identify other reasonably foreseeable actions that affect each resource.
- Assess potential cumulative impacts.
- Report results.
- Assess the need for mitigation, if needed.

2.5.3 Resources Excluded from Cumulative Impacts Analysis

If a project would not result in a direct or indirect impact on a resource, it would not contribute to a cumulative impact on that resource and need not be evaluated with respect to potential cumulative impacts. Similarly, CEQA requires analysis of potential environmental impacts that are individually limited but cumulatively considerable. CEQA does not require an analysis of incremental effects that are not cumulatively considerable, nor is there a requirement to discuss impacts that do not result in part from the project evaluated. The following resources are excluded from the cumulative impacts analysis for the reasons provided above.

- Coastal zone
- Wild and scenic rivers
- Farmlands and timberlands
- Relocations and property acquisitions
- Parks and recreation
- Growth
- Community character and cohesion
- Environmental justice
- Equity
- Utilities and emergency services

2.5.4 Resources Evaluated for Cumulative Impacts

The following discussion of potential cumulative impacts is presented by environmental resource topic. The following resources are evaluated in this section for cumulative impacts: traffic and transportation/pedestrian and bicycle facilities, visual/aesthetics, cultural resources, hydrology and floodplains, water quality, geology, paleontology, hazardous waste/materials, air quality, climate change, noise, energy, natural communities, wetlands and other waters, plant species, animal species, threatened and endangered species, and invasive species.

The planned, completed, and proposed projects considered in this analysis are presented in Table 2.5-1 and shown on Figure 2.5-1. In general, most of the projects listed are infill projects, and the listed transportation projects would improve existing facilities rather than construct new facilities.

Table 2.5-1. Planned, Completed, and Proposed Projects in the Project Vicinity

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
1	I-15/Railroad Canyon Road and Franklin Interchange Project (Phase 2)	City of Lake Elsinore	Interstate (I-)15 and Franklin Street	• Construct new full interchange at I-15/ Franklin Street. • Add auxiliary lanes from Franklin Street Interchange to Main Street Interchange and from Franklin Street Interchange to Railroad Canyon Road Interchange. • Widen Main Street and realign/widen southbound on-ramps from 1 to 2 lanes. • Construct new frontage road on the east side of 1-15.	**Proposed:** Final design of Franklin Interchange was initiated in April and is planned to be in construction by 2028. **Constructed:** Phase 1 (Railroad Canyon) was completed and open to the public in summer 2022.
2	Ashland Springs - 90 Condominium Units	City of Lake Elsinore	Southwest corner of Franklin Street and Avenue 6, APNs: 373-071-020, 021, 022, 023, 024, 025, 026, 027, 028	90 condominium units	**Constructed**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
3	Eight-Unit Apartment Complex	City of Lake Elsinore	125 Heald Avenue (APN: 373-025-008)	6,839-square-foot, 8-unit apartment complex, laundry facility, trash enclosure, and related improvements	**Proposed:** This project was approved in 2019: Residential Design Review No. 2015-03.
4	Camino Del Norte Extension	City of Lake Elsinore	Camino Del Norte and Canyon Estates Drive, south of Main Street	Extension of Camino Del Norte from Main Street to Franklin Street, realignment of Canyon Estates Drive, and extension of Canyon View Drive and Sagecrest Drive	**Constructed:** March 2020
5	Boos Commercial Development Main Street	City of Lake Elsinore	East side of Main Street between Flint Street and I-15 southbound on-ramp; APNs: 377-243-002, 003, 004, 005, 006, and 007	Commercial center	**Constructed:** 2021
6	I-15/Main Street Interchange	City of Lake Elsinore	I-15 Main Street interchange	Interchange improvements	**Under Construction:** May 2024
7	Commercial construction on Minthorn Street	City of Lake Elsinore	APN: 377220024	Not available	**Under Construction**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
8	Pennington Industrial Project	City of Lake Elsinore	Southeast corner of Chaney Street and Minthorn Street, APN: 377-160-014	Construct 3 industrial buildings that are 91,140 square feet in total, with 167 parking spaces.	**Constructed:** 2021
9	Fairway Business Park II	City of Lake Elsinore	445–495 Birch Street	Development of 6 industrial buildings ranging in size from 8,154 to 18,411 square feet (70,705 square feet total)	**Constructed:** 2022
10	Lake Elsinore Honda	City of Lake Elsinore	18450 Collier Avenue, APNs: 377-080-053, 377-080-057, and 377-080-079	53,425-square-foot single-story building	**Constructed:** 2020
11	Commercial Development, Southeast corner of Collier Avenue and Central Avenue	City of Lake Elsinore	Miguel's Jr. (18320 Collier Avenue) and commercial building (18330 Collier Avenue, Suite 102); APN: 377-081-004	Commercial building and a restaurant	**Constructed**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
12	La Quinta Inn & Suites	City of Lake Elsinore	Northeast corner of Dexter Avenue and Third Street; APN 377-090-036	36,664-square-foot, 4-story, 64-room hotel on an approximately 1.05-acre site	**Currently vacant site in entitlement stage**
13	Wasson Canyon	City of Lake Elsinore	North, south, and east of 3rd Street; west of Diana Lane	TTM No. 37381 is a subdivision of 19.54 acres into 73 single-family residential lots. TTM No. 37382 is a subdivision of 55.06 acres into 199 single-family residential lots.	**Proposed:** 1-year extension of time to May 14, 2024 for TTM Nos. 37381 and 37382
14	I-15/Central Avenue Interchange	City of Lake Elsinore	I-15/State Route (SR-)74 (Central Avenue), between 1,000 feet west of Collier Avenue to Riverside Street	Add northbound loop off-ramp with a deceleration lane, realign northbound entry and exit ramps, add southbound acceleration/ deceleration lanes, add northbound deceleration lane, widen SR-74 from Riverside Drive to Central Avenue from 2 to 4 through lanes and from Collier Avenue to Cambern Avenue from 6 to 8 through lanes, and construct new Riverside Avenue Overcrossing and SR-74 PM 15.5.	**Proposed:** Construction is anticipated in 2025–2026.

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
15	Kassab Travel Center	City of Lake Elsinore	Northwest corner of Collier Avenue and Riverside Drive	8,360-square-foot convenience store with 3 quick-serve restaurants, 2 covered gas dispensing areas totaling 6,092 square feet, and a freestanding 2,543-square-foot fast food restaurant with a drive-through on 2.39 acres	**Proposed:** This project was approved by City Council on July 14, 2020.
16	Nichols Ranch Specific Plan	City of Lake Elsinore	APNs 389-200-(038, 039); 389-210-(008, 032, 034, 036) and portions of current APNs 289-200-035 and 289-200-036	Master-planned, low-medium–density residential community with commercial uses on an approximately 72.5-acre site	**Adopted:** This project was adopted by City Council June 11, 2019.
17	Lake Street Storage	City of Lake Elsinore	APN: 390-130-018	3,528-square-foot service station with convenience store, fuel canopy with 6 fuel pumps; new 90,000-square-foot, single-story indoor RV and boat storage facility, with 24,000 square feet of mezzanine and 192 surface RV parking spaces partially covered with 3 canopies with	**Under Construction**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
				solar panels on 10.63 net acres	
18	PP26403 Self Storage facility	County of Riverside	Construction off Temescal Canyon, south of Hostettler Road	Storage facility	**Under construction**
19	Modular Building Fabricator	County of Riverside	North side of Concordia Ranch Road, east of Temescal Canyon Road	Construction/assembly of modular buildings	**Operational**
20	Horsethief Canyon Road (Interchange)	County of Riverside	Riverside County	Reconstruct/widen interchange from 2 to 4 lanes and reconstruct ramps.	**Proposed:** RTP# 3M0729; projected completion year 2035
21	Residential Development - TTM 37155	County of Riverside	South of Kingbird Drive, east of Towhee Lane, and west of Indian Truck Trail; APN: 290-150-004	53.7 acres into 85 single-family residential lots and 6 open space lots for 2 detention basins, 3.55-acre park area, and a 1,347-square-foot passive park	**Proposed:** TTM 37155, Change of Zone No. 1800010

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
22	Toscana Village Center	County of Riverside	Northwest of Indian Truck Trail, southwest of Temescal Canyon Road, northeast of I-15; APNs: 290-130-003, -004, -005, -006, -052, -053, -085, -086	Six buildings consisting of fast-food restaurants, a sit-down restaurant, office/retail, a daycare center, and a tire store	**Approved:** Approved by County Board of Supervisors on January 29, 2019; unknown when construction will begin
23	Temescal Village (Condo Development)	County of Riverside	North of Temescal Canyon Road, west of I-15, east of Wrangler Way, and south of Modjeska Summit Road; APNs: 290-060-024, -025.	Condominiums	**Proposed:** Approved June 5, 2018, by the Board of Supervisors Hearing on GPA01203, CZ07913, TR37153, PP26209
24	Tom's Farms Expansion Project	County of Riverside	Southwest of I-15, north of Squaw Mountain Road, east of Temescal Canyon Road	A phased expansion of the existing Tom's Farms facility to include an 8,559-square-foot banquet building, 1,800-square-foot multipurpose facility, 81,573-square-foot retail/	**Proposed**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
				commercial buildings, 6,790-square-foot bakery with drive-through, 12,844-square-foot greenhouse, 6,850-square-foot barn, 4,400-square-foot amusement park building, and 8,198-square-foot water park	
25	Temescal Canyon Road (Interchange)	County of Riverside	Riverside County	Reconstruct/widen Temescal Canyon interchange from 2 to 4 lanes and reconstruct ramps.	**Proposed:** RTP# 3M0728; projected completion year 2040
26	The Hydro-Conduit Site	County of Riverside	North, south, and east of Dawson Canyon Road and west of Temescal Canyon Road and I-15	Warehouse buildings ranging from 36,500 to 227,400 square feet, and retail buildings range from 2,900 to 4,300 square feet, including a gas station with convenience store and car wash, a fueling position canopy, and 2 drive-through restaurants	**Proposed**
27	Knabe Road Commercial Center	County of Riverside	Northeast of Knabe Road, south of Weirick Road, and west of I-15	2,695-square-foot convenience store, 2,462-square-foot fast-food restaurant, and a gas station	**Proposed**

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
28	Seven Oaks	County of Riverside	Southwest corner of Temescal Canyon Road and Dos Lagos Drive	Gas station, car wash, convenience store, and 2 drive-through restaurants on 20.24 acres	**Constructed**
29	Interstate 15 Interim Corridor Operations Project	County of Riverside	I-15 from Cajalco Road in Corona to Weirick Road in Temescal Valley	Add a non-tolled lane on southbound I-15 from the Cajalco Road On-Ramp to the Weirick Road Off-Ramp, next to the outer shoulder.	**Constructed:** 2022
30	Arantine Hills	City of Corona	Southwest of I-15, south of Cajalco Road	A specific plan that proposes 1,621 residential units on 129 acres, 38 acres of general commercial development, 40 acres of mixed-use development, 37 acres of open space, and 15 acres of park land	**Proposed:** Precise Plan (PP16-012) and a merchant builder map (TTM 37030) approved for the first phase of development; under construction. Second phase is under plan check. City approved 12/19/2018. General Plan Amendment (GPA2018-0001)

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
					with Specific Plan Amendment (SPA2018-0001), Parcel Map (PM 37036), and amendment to the Development Agreement (AEC724, DA15-001).
31	Cajalco Road Widening	County of Riverside	Cajalco Road between Temescal Canyon Road to the west and I-215 to the east	Widen Cajalco Road between Temescal Canyon Road and I-215.	**Proposed:** Final design anticipated to begin in fall 2025.
32	Woodspring Suites Hotel	City of Corona	South side of Tom Barnes Street, east of I-15	48,413-square-foot, 4-story hotel containing 122 rooms on 5.02 acres	**Constructed** 2023
33	Latitude Business Park	City of Corona	East of I-15, at the northwest corner of Tom Barns Street and Temescal Canyon Road	15 parcels totaling 74.49 acres for the development of 13 industrial buildings	**Constructed** 2022

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
34	I-15 Express Lanes Project	County of Riverside	I-15 from Cajalco Road to SR-60	Addition of two tolled Express Lanes to I-15 in each direction, a distance of approximately 15 miles	**Constructed** 2021
35	Foothill Center	City of Corona	Corner of Foothill Parkway and I-15	82,870-square-foot commercial center consisting of a service station, 2 drive-through restaurant pads, 2 dine-in pads, 24,000-square-foot in-line tenant building, and a 4-story, 119-room hotel	**Constructed** 2023
36	Temescal Canyon Corridor—Ontario Avenue Segment	County of Riverside	Ontario Avenue from El Cerrito Road north 0.6 mile to State Street	Road widening from 2 to 4 lanes	**Under construction:** Completion is expected in 2026.
37	Ontario Avenue Widening	City of Corona	Ontario Avenue from California Avenue to State Street	Widen the north side of Ontario Avenue to increase the vehicle capacity	**Under construction:** Completion is expected in 2025.
38	Car Wash	City of Corona	South of Magnolia Avenue, west of Downs Way	10,000-square-foot car wash	**Proposed:** DPR2018-0019, under environmental review and design

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
39	Temescal Canyon Corridor–Dawson Canyon Widening Segment	City of Corona	Dos Lagos Drive to Dawson Canyon Road	Widen the roadway to 4 lanes between Dos Lagos Drive and Dawson Canyon Road.	**Under construction**
40	Cajalco Road Widening and Safety Enhancement Project	City of Corona	Harvill Avenue to Temescal Canyon Road	Widen and realign Cajalco Road between Temescal Canyon Road and I-215.	**Proposed:** Under environmental review
41	Ontario Avenue Widening/Complete Streets Project	City of Corona	Ontario Avenue from Lincoln Avenue to Buena Vista Avenue	Widen Ontario Avenue; install ADA-compliant sidewalks and ramps, curbs and gutters, and a Class II bike lane along the eastbound direction of travel.	**Proposed:** Under environmental review and design; expected to be constructed in 2025
42	Temescal Valley Commerce Center	Temescal Valley portion of Unincorporated Riverside County	Southeast of the intersection of Temescal Canyon Road and Dawson Canyon Road North	Seven light industrial warehouse buildings on approximately 33.73 acres. Total building area would be 637,718 square feet.	**Proposed:** Under environmental review

Figure 2.5-1 Reference No.	Name	Jurisdiction	Location	Proposed Uses	Status
43	Serrano Commerce Center	Temescal Canyon portion of Unincorporated Riverside County	Southeast of Temescal Canyon Road at I-15 interchange	Develop up to 6.47 million square feet of light industrial buildings across 375 acres, while also designating nearly 88 acres for open space and realigning major roadways in the area.	**Proposed:** Under environmental review
44	Baker Street Warehouse Project	City of Lake Elsinore	Baker Street and Pierce Street	Develop two warehouse buildings totaling over one million square feet on a 124-acre site.	**Proposed:** Under environmental review
45	State Highway Operation and Protection Program	City of Corona	Southbound I-15 from 0.2 mile north of Ontario Avenue undercrossing to Old Temescal Road undercrossing	Proposes to construct a deceleration lane prior to southbound Ontario Avenue offramp.	**Proposed:** Under plans, specifications, and estimate phase; construction is anticipated to begin in October 2026.

Table 2.5-2 identifies the RSA that corresponds to the cumulative analysis for each included resource. A cumulative impact analysis reviews the resources in the Project vicinity as a whole; as a result, the RSAs in the context of the cumulative analysis are often different than the study areas defined in the preceding sections of the EIR/EA.

Table 2.5-2. Resource Study Areas Included in Cumulative Impact Analysis

Resource Area	Reason Included in Cumulative Analysis	Resource Study Area
Land use	Temporary impacts on access of land use during construction	Communities within 0.5 mile of the Project limits, including adjacent Census Tracts in the Cities of Corona and Lake Elsinore, and unincorporated areas of Temescal Valley and Alberhill. (Project limits are defined as the Project footprint and the area of direct impacts where construction and operation activities under the Project have the potential to directly affect surrounding communities.)
Traffic and transportation/ pedestrian and bicycle facilities	Temporary impacts on traffic and circulation	22 miles on I-15 generally between the Franklin Street Overcrossing (to the south) and the I-15/Hidden Valley Parkway Interchange (to the north). The traffic study area also includes on- and off-ramps at the following 13 local interchanges: Main Street, SR-74 (Central Avenue), Nichols Road, Lake Street, Indian Truck Trail, Temescal Canyon Road, Weirick Road, Cajalco Road, El Cerrito Road, Ontario Avenue, Magnolia Avenue, SR-91, and Hidden Valley Parkway.
Visual/ aesthetics	Temporary and permanent impacts on visual and aesthetic resources	The area within 0.5 mile of the Project limits
Cultural resources	Temporary and permanent impacts on cultural resources	Area of Potential Effects
Hydrology and floodplains	Temporary and permanent impacts on hydrology and floodplains	Santa Ana River Hydrologic Unit (HU 801.0) and the Terra Colta (801.35), Lee Lake (801.34), Bedford (801.32), Coldwater (801.31), and Temescal (801.25) hydrologic sub-areas

Resource Area	Reason Included in Cumulative Analysis	Resource Study Area
Water quality	Temporary and permanent impacts on the watershed	Santa Ana River Hydrologic Unit (HU 801.0) and the Terra Colta (801.35), Lee Lake (801.34), Bedford (801.32), Coldwater (801.31), and Temescal (801.25) hydrologic sub-areas
Geology/soils/ seismic/ topography	Temporary and permanent impacts on soils and geologic conditions	Regional and local geology
Paleontology	Potential for destruction or damage on paleontological resources	Properties within and immediately adjacent to the Project limits
Hazardous waste/materials	Potential to encounter unexpected or unknown contaminants during construction-related soil disturbance activities	Project limits and a 300-foot buffer to account for adjoining properties
Air quality	Temporary impacts on air quality during construction and permanent criteria pollutant emission impacts during operations	South Coast Air Basin (SCAB)
Climate change	Permanent increase in operational GHG emissions	South Coast Air Basin (SCAB)
Noise	Temporary and permanent impacts from noise during construction and operation	500-foot buffer around Project limits
Energy	Temporary and permanent impacts from energy during construction and operation	Project construction limits, including several miles upstream and downstream of the Project limits
Natural communities	Temporary and permanent impacts on natural communities	Biological Study Area (BSA) and Western Riverside County Multiple Species Habitat Conservation Plan

Resource Area	Reason Included in Cumulative Analysis	Resource Study Area
		(MSHCP) areas in the Cities of Corona and Lake Elsinore, and in unincorporated areas of Temescal Valley and Alberhill. (MSHCP conserved lands occur within the BSA, just north of the City of Lake Elsinore along the western and eastern sides of I-15; smaller parcels are west of I-15 at the Temescal Wash crossing and between Corona Lake and I-15. Conservation easements under the MSHCP occur at the BSA near the Shops at Sycamore Creek complex, west of I-15.)
Wetlands and other waters	Temporary and permanent impacts on wetlands and other waters	Bedford Wash-Temescal Wash (Hydrologic Unit Code [HUC] 180702030604), Dawson Canyon-Temescal Wash (HUC 180702030602), Arroyo del Toro-Temescal Wash (HUC 180702030601), and Lake Elsinore (HUC 180702020308) subwatersheds of the Santa Ana River Watershed (HUC 18070105)
Plant species	Temporary and permanent impacts on rare plant species	BSA and Western Riverside County MSHCP areas in the Cities of Corona and Lake Elsinore, and in the unincorporated areas of Temescal Valley and Alberhill. (MSHCP conserved lands occur within BSA, just north of the City of Lake Elsinore along the western and eastern sides of I-15; smaller parcels are west of I-15 at the Temescal Wash crossing and between Corona Lake and I-15. Conservation easements under the MSHCP occur at the BSA near the Shops at Sycamore Creek complex, west of I-15.)
Animal species	Temporary and permanent impacts on special-status animal species	BSA and Western Riverside County MSHCP areas in the Cities of Corona and Lake Elsinore, and in unincorporated areas of Temescal Valley and Alberhill. (MSHCP conserved lands occur within BSA, just north of the City of Lake Elsinore along the western and eastern sides of I-15; smaller parcels are west of

Resource Area	Reason Included in Cumulative Analysis	Resource Study Area
		I-15 at the Temescal Wash crossing and between Corona Lake and I-15. Conservation easements under the MSHCP occur at the BSA near the Shops at Sycamore Creek complex, west of I-15.)
Threatened and endangered species	Temporary and permanent impacts on threatened and endangered species	BSA and MSHCP areas in the Cities of Corona and Lake Elsinore, and in unincorporated areas of Temescal Valley and Alberhill. (MSHCP conserved lands occur within BSA, just north of the City of Lake Elsinore along the western and eastern sides of I-15; smaller parcels are west of I-15 at the Temescal Wash crossing and between Corona Lake and I-15. Conservation easements under the MSHCP occur at the BSA near the Shops at Sycamore Creek complex, west of I-15.)
Invasive species	Potential for adverse effects during construction and post construction	BSA

2.5.4.1 Traffic and Transportation/Pedestrian and Bicycle Facilities

Within the Project limits, I-15 traverses developed and undeveloped areas of the City of Lake Elsinore, unincorporated areas of Riverside County (including Temescal Valley area), and the City of Corona. It is a major regional connection between the southwest and northwest Riverside County communities. I-15 provides continuity for regular commuters traveling for work and school to Temecula and San Diego to the south, Riverside and San Bernardino County to the north, and Los Angeles County and Orange County to the west.

Existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Because of forecasted population growth and the continued development to support the projected growth in the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline, as discussed in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*.

Construction activities associated with the Project would temporarily affect traffic and circulation. Temporary ramp closures not exceeding 10 consecutive days in duration

may be needed to complete ramp widening improvements on I-15. In addition, the Project may periodically affect pedestrian and bicycle facilities during construction of the bridge widenings over local roadways. There is a potential for construction activities to occur at the same time between the Project and the listed projects in Table 2.5-1, which may lead to cumulative impacts on traffic operations during construction.

As discussed in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilitie*s, it is anticipated that access to pedestrian and bicycle facilities would be maintained during construction activities. If temporary closures to pedestrian and bicycle facilities are unexpectedly needed, then detour routes would be provided. Potential construction-related traffic and circulation impacts, and impacts on pedestrian and bicycle facilities, would be minimized through implementation of a comprehensive TMP, included as Standard Project Measure **TR-1**, in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*. The TMP would be prepared to minimize motorist delays and impacts on pedestrians and bicyclists when performing work activities. In addition, Project construction is not anticipated to affect existing emergency or transit services within the Project limits; however, the TMP would ensure that such impacts are minimized. The Project's temporary impact on traffic would not be substantial.

Similar to the Project, other projects, including those listed in Table 2.5-1, are required to minimize and reduce impacts on traffic and transportation facilities during construction activities. Therefore, the Project, when combined with other projects, would not result in cumulative impacts related to traffic and transportation facilities.

In Opening Year (2030), the Build Alternative (Preferred Alternative) is projected to improve traffic operation level of service (LOS) where the number of freeway mainline and ramp locations during the AM and PM peak hour operating at LOS E or worse would be reduced by approximately 8 percent when compared to the No-Build Alternative (Table 2.2.8-18). The Build Alternative (Preferred Alternative) is expected to serve approximately 2,089 more vehicles during the peak period, particularly those making longer trips, and reduce overall vehicle delay within the traffic study limits by approximately 4.4 percent (Table 2.2.8-18). When comparing the projected volume served and total distance traveled, it is expected that the Build Alternative (Preferred Alternative) would serve trips with longer lengths than the No-Build Alternative.

In Design Year (2050), the Build Alternative (Preferred Alternative) is projected to degrade traffic operation LOS at approximately 14 percent of the freeway mainline and ramp locations during the AM and PM peak hours when compared to the No-Build Alternative (Table 2.2.824), primarily because the Project is projected to shift the bottlenecks downstream by providing additional throughput (traffic flow) capacity (projected to serve 3,646 more vehicles during the peak hour). With the increased capacity that would be provided on the freeway system associated with the express lanes under the Build Alternative (Preferred Alternative), more demand is expected to occur and to be served. Similar to Opening Year (2030), the Build Alternative (Preferred Alternative) is projected to serve longer trip lengths on the freeway in Design Year (2050) because vehicles are expected to prefer to stay on I-15 rather than exit and

divert to cut through or parallel local facilities. On average, trip lengths are projected to increase by 1.6 miles between the No-Build Alternative and Build Alternative (Preferred Alternative). The delay within the traffic study area is expected to be reduced by 5.7 percent when accounting for local roadways.

The transportation system in the Southern California region consists of a modal network of roads and highways, public transit, and rail facilities. The transportation system is planned to support the region's economic needs as well as the demand for personal travel. The 2024–2050 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) lists several thousand transportation projects for meeting the increase in transportation demand and improving the region's mobility while, at the same time, meeting the goals for air quality and revitalizing the economy. The development of an extensive regional express lanes network is a key strategy in the 2024–2050 RTP/SCS that aims to improve travel time reliability, provide travel choice, and optimize existing freeway capacity within the Southern California Association of Governments (SCAG) region. Several tolled express lanes projects have already been completed in the Inland Empire, including the SR-91 Express Lanes in 2017 and the I-15 Express Lanes Project in 2021. In addition, the I-10 Corridor Project, which is now fully operational, has added express lanes in each direction on I-10 from the western terminus at the Los Angeles/San Bernardino county line to just east of the I-15/I-10 interchange. The addition of the Project would extend the I-15 Express Lanes an additional 14.5 miles in the Inland Empire.

As discussed in Section 2.2.8, the Build Alternative (Preferred Alternative) is not expected to result in substantial impacts relating to conflicts with the circulation system, roadway design hazards, and emergency access.

2.5.4.2 Visual/Aesthetics

The Project may result in travelers experiencing minor short-term visual impacts during construction from the presence of construction equipment. Viewsheds containing identified visual resources are not expected to be affected by the implementation of the Project because the overall visual character of the Project is considered low. Additionally, the design of the Build Alternative (Preferred Alternative) and other proposed or planned highway improvement projects along I-15 would be consistent with Caltrans highway landscape and design policies/best management practices (BMPs), reducing the potential for cumulative visual impacts to occur. The viewshed has already been substantially affected by I-15 and other area development. The Build Alternative (Preferred Alternative) would not substantially change the existing views of or from I-15, and impacts on visual quality would be low or neutral. In addition, Avoidance and Minimization Measures **AES-1** through **AES-4** would reduce or avoid any potential visual impacts during construction. Therefore, the Project would not have significant cumulative impacts under CEQA, related to visual resources.

2.5.4.3 Cultural Resources

The Advisory Council on Historic Preservation regulations, which govern implementation of Section 106 of the National Historic Preservation Act (Section 106),

state that adverse effects on historic properties may include reasonably foreseeable effects that may occur later in time, be farther removed in distance, or be cumulative (36 CFR 800.5(a)(1)). Analysis of cumulative effects under Section 106 requires the consideration of past, present, and future projects that may result in a cumulative effect on historic properties.

There are four archaeological resources (P-33-000108, -000630, -001099, and -002992; with Cultural Studies Office [CSO] approval on January 27, 2023) and three Traditional Cultural Properties (TCPs) (Túu'uv [TCP-1], Qaxáalku Payómik [TCP 2], and Qaxáalku Kwíimik [TCP-3]; with CSO approval on March 10, 2022) within or adjacent to the Project Area of Direct Impact (ADI)/Area of Potential Effects (APE) that are assumed eligible for listing on the National Register of Historic Places (NRHP) for the purposes of the Project only. The cumulative contribution of the proposed direct and indirect Project impacts and effects on the four archaeological resources and the three TCPs is considered in the context of the APE and vicinity, which stretches from the City of Lake Elsinore through the unincorporated Riverside County community of Temescal Valley to El Cerrito Road in the City of Corona. The impacts of past and foreseeable projects in this area are combined with the potential Project effects on the archaeological sites and the TCPs to assess the Project's contribution to cumulative effects on the character-defining features of the properties.

P-33-000108 (CA-RIV-108)

Site P-33-000108 is outside of the Project ADI/APE; however, its proximity warrants analysis and an assumption of eligibility for the purposes of the Project in an abundance of caution to protect any intact portions of the site. The site has been assumed eligible for the purposes of the Project only with CSO approval on January 27, 2023. P-33-000108 is in an area that is relatively undisturbed physically except for a natural wash and a dirt road. As mentioned, the site is not within the Project ADI or APE, and the setting of the site has been substantially altered from earlier construction related to I-15 and the Temescal Canyon Road Off-Ramp. Direct impacts related to the Project would occur approximately 160 to 220 feet west of the site boundaries. The substantial portion of Project construction is to be conducted in previously disturbed areas, such as the median, or along the edges of the roadway. While previous projects may have affected features that would contribute to the site's potential eligibility for the NRHP, the Project is not expected to result in impacts on this site and, therefore, would not contribute to a cumulative adverse effect on the site.

P-33-000630 (CA-RIV-630)

Site P-33-000630 is outside of the Project ADI and APE. Because of the site's proximity to the Project, the site was assumed eligible for the purposes of the Project only with CSO approval on January 27, 2023, and it is considered here for potential cumulative effects of the Project. P-33-000630 has been severely affected by both natural and human-induced activities. While previous projects have had a significant adverse effect on the site, the Project would not have any direct impact on the features of the site that might otherwise contribute to the site's potential eligibility for the NRHP. As such, the

Project would not have an incremental impact and would not contribute to a cumulative adverse effect on the site.

P-33-001099 (CA-RIV-1099)

The heavily disturbed archaeological site P-33-001099 is within the Project APE but outside of the ADI. P-33-001099 has been affected by past construction of I-15, which has bisected the site. Additionally, the past construction of Temescal Canyon Road and associated landscape modifications have altered the site. Presently, there are only small remnants of the site that are possibly intact outside of the Project ADI but within the APE. As noted, proposed direct Project impacts are expected to avoid the site and are anticipated to occur anywhere from 75 to 150 feet from the existing intact site boundaries. Furthermore, the intact portions of the site are along the remnants of a ridge, portions of which were previously excavated as part of the construction of I-15. All Project work near the intact site boundaries would be within the areas previously disturbed when the highway was originally constructed. While previous projects such as construction of the highway and housing developments on the highway's west side have had an adverse effect on the site, the Project would not result in a direct impact on the features of the site that might otherwise contribute to its eligibility for the NRHP. As such, the Project would not have an incremental impact and would not contribute to a cumulative adverse effect on the site.

P-33-002992 (CA-RIV-2992)

Site P-33-002992 is outside of the Project ADI and APE and partially within the Caltrans right of way. Due to the site's proximity to the Project, the site was assumed eligible for the purposes of the Project only with CSO approval on January 27, 2023, and it is considered here for potential cumulative effects of the Project. A small northern portion of the site has been destroyed during highway construction in the past. This portion of the site is adjacent to the ADI and APE; however, direct impacts related to the Project would occur approximately 250 to 500 feet east of the site boundaries. As such, the Project would not have any impact on the site. A large housing development was constructed in the late 1990s to early 2000s to the south of the site and likely had an adverse effect on the site through an increase in foot traffic, some minor grading, and loss of setting. While previous projects such as construction of the highway and housing developments on the highway's west side have had an adverse effect on the site, the Project would not result in a direct impact on the features of the site that might otherwise contribute to its eligibility for the NRHP. As such, the Project would not have an incremental impact and would not contribute to a cumulative adverse effect on the site.

Traditional Cultural Properties

The TCPs, portions of which are within the Project APE, are significant for their religious and cultural significance to the Luiseño; are associated with cultural practices, traditions, and beliefs; and are embodied in the landscape. Overall, the proposed Project APE is 981 acres, while the approximate acreage of the TCPs (determined previously) is greater than 28,000 acres. Because the full boundaries have yet to be determined for the TCPs, this number is an underestimate. This would indicate that the

entire APE is approximately 0.03 percent of the currently identified area of the TCPs; however, not all of the APE is within the currently identified boundaries of the TCPs. The total amount of acreage from the APE that is within the TCPs is approximately 96.34 acres or 0.003 percent of the estimated total TCP acreage.

Although the outer boundaries and all of the individual components or contributing elements of the TCPs are not fully defined, changes to the location, setting, and visual character of the TCPs resulting from the Project and other past and planned future projects are not expected to be significant because they have affected or would affect only a minute portion of the overall geographic extent of the TCPs. Ground-disturbing activities associated with the Project would not affect potential individual components of the TCPs (which may include archaeological sites adjacent to the ADI). Therefore, their loss would not be cumulatively adverse because the impact on the landscape and intangible cultural values held by the Luiseño caused by the Project would not change the integrity of setting, feeling, character, and location of *Túu'uv* (TCP-1)*, Qaxáalku Payómik* (TCP-2)*,* and *Qaxáalku Kwíimik* (TCP-3). Therefore, with respect to the TCPs, there would be no contribution by the Project to a cumulative adverse effect.

Summary

Considered with past impacts, the projects in the region potentially represent various forms of direct and indirect impacts on historic properties identified as part of the Project and in the region. Four archaeological sites and three TCPs are considered historic properties for the purposes of the Project only. The four archaeological sites (P-33-000108, -000630, -001099, and -002992) are all outside of the Project ADI and are not anticipated to be affected by Project activities. If any unforeseen impacts should occur, Standard Project Measures **CR-1** through **CR-4** would avoid or minimize potential impacts. (See Section 2.2.10, *Cultural Resources*, for full text of the measures.)

Direct impacts could include complete removal of features and cultural constituents on portions of sites and removal of undocumented potential subsurface components relating to construction activities. Indirect impacts could include loss of setting, loss of traditional viewsheds, and increases in noise and vehicular and pedestrian traffic. However, as explained above, the Project would not represent an incremental increase of adverse effects from past and future projects. Therefore, there would be no adverse cumulative effects on the seven historic properties (four archaeological sites and three TCPs) considered eligible for the NRHP for the purposes of the Project only and identified within or adjacent to the Project's APE. As such, the Project would not result in a cumulative adverse effect on historic properties. Consequently, the Project would not have a significant cumulative impact under CEQA related to historic properties.

2.5.4.4 Hydrology and Floodplains

As discussed in Section 2.3.1, *Hydrology and Floodplain*, the Project is within or adjacent to Federal Emergency Management Agency–designated 100-year floodplains Zones A, AE, and AO, which are associated with the following six channels: Arroyo del Toro, Stovepipe Canyon Wash, Temescal Creek, Mayhew Wash, Coldwater Wash, and

Bedford Wash. The Project includes bridge widening work at Temescal Creek, Mayhew Wash, Coldwater Wash, and Bedford Wash. The Project does not alter the existing drainage facilities at Arroyo del Toro or Stovepipe Canyon Wash.

Temescal Creek is designated as Zone AE and is classified as a Regulatory Floodway within the Project limits. The *I-15 Express Lanes Project Southern Extension Location Hydraulic Study* (Caltrans 2023) determined that Temescal Creek would experience approximately a 0.51-foot water surface elevation (WSE) increase as a result of the Project, which exceeds the 0.0-foot rise allowance for a Regulatory Floodway. Changed conditions in Temescal Creek would require preparation of a conditional letter of map revision during final design, a hydraulic analysis, and remapping the floodplain. Mayhew Wash is anticipated to experience a 0.02-foot increase in WSE as a result of the Project. Coldwater Wash is anticipated to experience a 0.13-foot decrease in WSE as a result of the Project. Bedford Wash is anticipated to experience a 0.54-foot increase in WSE as a result of the Project.

Project improvements would meet Caltrans requirements listed in the *Caltrans Highway Design Manual*, Section 821.3 (1) Bridges, which states the hydraulic design of bridges should pass a 2 percent probability flood (50-year). The Project's hydraulic models for Temescal Creek, Mayhew Wash, Coldwater Wash, and Bedford Wash show that under proposed conditions the WSE would still match the existing conditions within a foot of the channels, and there would be sufficient waterway area to pass the 1 percent (100-year) probability base flood without freeboard under proposed conditions. Therefore, the new bridge widening within these channels would not interfere with the flows within the channels, and the minimal increase in WSE would be contained within the boundaries of the mapped floodplains. The Arroyo del Toro and Stovepipe Canyon Wash hydraulics and floodplains would not be affected because the existing drainage facilities at these channels would remain the same.

The Project would not support incompatible floodplain development. In addition, the minimal increase in WSE would not introduce additional risk for traffic disruptions or loss of life and property. Based on the assessment of level of risk in the *I-15 Express Lanes Project Southern Extension Location Hydraulic Study* (Caltrans 2023), the Project is considered low risk. Work within any floodplains, including the proposed bridge widening work at Temescal Wash, Mayhew Wash, Coldwater Wash, and Bedford Wash, would require an encroachment permit from the Riverside County Flood Control and Water Conservation District.

Similar to the Project, the listed projects in Table 2.5-1 are subject to comply with applicable local, State, and federal floodplain management regulations and policies. Therefore, the Project would not contribute to significant cumulative impacts under CEQA related to hydrology and floodplains.

2.5.4.5 Water Quality

The cumulative RSA for water quality includes the Santa Ana River Hydrologic Unit (HU 801.0) and the Terra Colta (801.35), Lee Lake (801.34), Bedford (801.32), Coldwater (801.31), and Temescal (801.25) hydrologic sub-areas. The Project would result in

approximately 125 acres of new impervious surface, which would include a permanent increase in impervious surface of approximately 82 acres, and approximately 43 acres in replaced impervious surface. The increase in impervious areas is expected to result in increased pollutant build up and wash off. A greater volume and rate of stormwater runoff could cause or contribute to erosion and off-site pollutant transport. Runoff would be minimized by the implementation of post-construction water quality BMPs required by the Caltrans Municipal Separate Storm Sewer System Permit, as discussed in Section 2.3.2, *Water Quality and Stormwater Runoff*. These BMPs, which are designed to handle Project runoff, in addition to Standard Project Measures **WQ-1** through **WQ-4**, **WQ-6** through **WQ-8**, and Avoidance and Minimization Measure **WQ-5** in Section 2.3.2, *Water Quality and Stormwater Runoff*, would sufficiently address any off-site runoff that may occur and are expected to avoid and/or minimize impacts related to surface runoff and water quality. Therefore, the Project has a low potential to cause adverse water quality impacts on surface waters or groundwater in the area.

The Project, in conjunction with other projects listed in Table 2.5-1, would contribute to an increase in impervious surfaces within the cumulative resource study area for water quality, which would result in an increase in stormwater runoff. However, the listed projects are subject to water quality rules and regulations and would be required to be developed in compliance with water quality regulations to avoid any impacts on water resources. Therefore, the Project is not anticipated to result in significant cumulative impacts under CEQA related to water quality.

2.5.4.6 Geology/Soils/Seismic/Topography

The Project is within a seismically active region subject to future moderate to strong seismic ground shaking from earthquakes occurring along regional and local faults. However, the potential impacts of the Project related to geologic conditions and soils, as discussed in Section 2.3.3, *Geology, Soils, Seismic, and Topography*, would be addressed with adherence to Caltrans' standard design and construction practices, which are required on all State Highway System projects; as such, impacts related to geology, soils, seismicity, and topography would be avoided or minimized. Additionally, construction or operation of the Project would not exacerbate existing geological conditions. As a result, the Project would not contribute to significant cumulative impacts under CEQA related to geology, soils, seismicity, and topography.

2.5.4.7 Paleontology

Geologic mapping and geotechnical studies indicate the Project footprint is underlain, in part, by the following geologic units with high paleontological sensitivity: late to middle Pleistocene-age old alluvial fan deposits, middle to early Pleistocene-age very old alluvial fan deposits, late to middle Pleistocene-age old axial channel deposits, and middle to early Pleistocene-age very old axial channel deposits. Project construction is expected to affect these units and therefore could result in impacts if paleontological resources are present.

During the pedestrian field survey that was conducted, no fossils were observed or collected. High-sensitivity early Miocene- to Oligocene-age Vaqueros and Sespe

Formations, undivided (Tvs), were observed in nearby hill exposures immediately adjacent to the survey area, but they were not observed directly along the survey corridor.

In the event that unanticipated paleontological resources are identified during construction, Mitigation Measure **PAL-1** in Section 2.3.4, *Paleontology*, would require the development of a Paleontological Mitigation Plan for the Project to ensure impacts on paleontological resources are reduced in the unlikely event that they are discovered.

The Build Alternative (Preferred Alternative) and other projects in the vicinity of the RSA could disturb sensitive sediments that may contain paleontological resources, thereby contributing to cumulative impacts on paleontological resources. Projects that include excavation in previously undisturbed areas could, in conjunction with nearby construction requiring ground disturbance, contribute cumulatively to impacts on paleontological resources. However, impacts on paleontological resources as a result of other projects would depend on the depth of excavation, if excavation is required, and the presence of sensitive sediments. Because the potential to encounter paleontological resources would be highly dependent on factors mentioned previously, the potential to encounter paleontological resources during construction activities would be minimal. Therefore, the Project, in combination with other planned projects, is not expected to result in significant cumulative impacts under CEQA.

2.5.4.8 Hazardous Waste/Materials

Although the Project would not require any right of way acquisition at any known hazardous material sites within or adjoining the Project limits, as described in Section 2.3.5, *Hazardous Waste/Materials*, there is a potential for the Project to encounter unexpected or unknown contaminates during construction-related soil disturbance activities, such as soil and groundwater contamination or abandoned underground storage tanks. In addition, the Project also has the potential to encounter non-hazardous aerially deposited lead soils within the median, shoulders, and ramps along I-15; asbestos-containing materials and lead-based paint associated with I-15 bridge structures that are proposed for widening; treated wood waste from wooden guardrail posts; lead chromate from paint and thermoplastic striping; and construction-generated hazardous waste such as lubricants (both grease and oils), petroleum fuels, cleaning solvents, and paint. Hazardous wastes and materials that may be encountered during Project construction activities would be properly handled, contained, transported, and disposed of in compliance with applicable regulations and requirements, which may include those of the Resource Conservation and Recovery Act, Clean Air Act, Clean Water Act (CWA), Department of Toxic Substances Control Environmental Health Standards for the Management of Hazardous Waste, and provisions of the Riverside County Department of Environmental Health Hazardous Materials Branch and U.S. Department of Transportation. In addition, Standard Project Measures **HW-1** through **HW-4**, **HW-6**, and **HW-8,** and Avoidance and Minimization Measures **HW-5** and **HW-7** as described in Section 2.3.5, *Hazardous Waste/Materials*, would be implemented to help protect worker health and safety, the public, and the environment from encountering hazardous waste and materials during construction activities. During

operation of the Project, routine maintenance activities, such as repaving or striping, would be required to follow applicable federal and State regulations with respect to the use, storage, handling, transport, and disposal of potentially hazardous materials.

Similar to the Project, the listed projects in Table 2.5-1 are subject to comply with applicable local, State, and federal regulations and policies with respect to the use, storage, handling, transport, and disposal of potentially hazardous waste/materials during construction and operation. Therefore, the Project, when combined with other projects, would not result in significant cumulative impacts under CEQA related to hazardous waste/materials.

2.5.4.9 Air Quality

The Southern California Association of Governments' 2024–2050 RTP/SCS Final Program Environmental Impact Report (2024–2050 RTP/SCS PEIR; SCAG 2024) analyzed and determined the following, which is relevant to the cumulative condition and conclusions for the ELPSE:

> *The main health concerns associated with PM_{10} and $PM_{2.5}$ exposure (such as from vehicle exhaust or windblown dust events) include worsening of symptoms in sensitive patients with respiratory disease and excess seasonal declines in pulmonary function, especially in children. This can include an increase in the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances, such as lead, sulfates, and nitrates can cause lung damage directly. These substances can be absorbed into the blood stream and cause damage elsewhere in the body. These substances can transport absorbed gases, such as chlorides or ammonium, into the lungs and cause injury. Whereas PM_{10} tends to collect in the upper portion of the respiratory system, $PM_{2.5}$ is much smaller and it can penetrate deeper into the lungs and damage lung tissues. Suspended particulates also damage and discolor surfaces on which they settle, as well as produce haze and reduce regional visibility.*
>
> *The Plan's [RTP 2024-2050 PIER] increase in PM_{10} and $PM_{2.5}$ emissions could worsen the health concerns listed above or result in Air Quality Index values that are unhealthy for sensitive groups and other populations.*

Permanent Impacts

The operational emissions analysis discussed in the 2021 Vehicle Miles Traveled (VMT) Analysis Memorandum (Caltrans 2021) compares forecast emissions for existing/baseline conditions, the Build Alternative (Preferred Alternative), and the No-Build Alternative using the vehicle miles traveled (VMT) estimates. The regional VMT data for existing conditions, the No-Build Alternative, and the Build Alternative (Preferred Alternative), along with the CT-EMFAC2017 emission rates, were used to calculate the carbon monoxide (CO), nitrogen oxides (NO_X), particulate matter 10 microns or less in diameter (PM_{10}), particulate matter 2.5 microns or less in diameter

($PM_{2.5}$), and reactive organic gas (ROG) emissions for the Existing (2019) and Opening Year and Design Year conditions.

The results of the modeling are summarized in Table 2.5-3.

Table 2.5-3. Operational Criteria Pollutant Emissions (pounds per day)

Scenario/Analysis Year	PM_{10}	$PM_{2.5}$	CO	NO_X	ROG
Existing Year (2019)	1,594.2	8,015.4	9,049.5	22,446.9	1,848.1
Opening Year (2030) No-Build Alternative	2,326.0	12,381.4	5,765.7	17,172.7	1,417.2
Opening Year (2030) Build Alternative (Preferred Alternative)	2,396.3	12,752.0	5,830.8	17,467.2	1,429.4
Design Year (2050) No-Build Alternative	2,449.6	13,179.0	5,464.7	14,394.8	950.0
Design Year (2050) Build Alternative (Preferred Alternative)	2,507.2	13,485.3	5,441.7	14,536.9	947.7
Net Emissions Comparison to Existing Conditions 2019					
Opening Year (2030) Build Alternative (Preferred Alternative)	802.1	4,736.7	-3,218.8	-4,979.6	-418.8
Design Year (2050) Build Alternative (Preferred Alternative)	913.1	5,469.9	-3,607.8	-7,910.0	-900.5
Net Emissions Comparison to No-Build Conditions					
Opening Year (2030) Build Alternative (Preferred Alternative)	70.3	370.7	65.1	294.5	12.2
Design Year (2050) Build Alternative (Preferred Alternative)	57.6	306.2	-23.0	142.1	-2.3

Source: Modeled using CT-EMFAC2017.

The emissions analysis presented in Table 2.5-3 indicates that operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase PM_{10} and $PM_{2.5}$ emissions compared with existing conditions and decrease ROG, NO_X, and CO emissions. This impact would be significant and unavoidable under CEQA for the Project-level analysis because of cumulative impacts related to PM_{10} and $PM_{2.5}$ emissions.

The Project's incremental increase in PM_{10} and $PM_{2.5}$ emissions would be a significantly cumulative impact under CEQA. However, Mitigation Measures **AQ-6** through **AQ-8** would be implemented to reduce air quality impacts.

Temporary Impacts

During construction, short-term degradation of air quality may occur due to the release of particulate emissions (airborne dust), particulate matter, construction equipment emissions, and other construction-related activities. Because the Project is in the South Coast Air Basin (SCAB), the SCAB is the appropriate study area for the evaluation of cumulative impacts on air quality. According to the 2022 Air Quality Report completed for the Project, the South Coast Air Quality Management District (SCAQMD) is responsible for managing the SCAB's air resources and is therefore responsible for bringing the basin into attainment with respect to the National Ambient Air Quality Standards and California Ambient Air Quality Standards. This requires SCAQMD to prepare updates to the air quality management plans for the SCAB concerning the various pollutants with emissions inventories based on data from SCAG. The Project is included in the SCAG 2024–2050 RTP/SCS under project number 3160001-RIV170901 and has been identified in the SCAG 2025 Federal Transportation Improvement Program, which was approved by the Federal Transit Administration on December 16, 2024. Section 2.3.6, *Air Quality*, discusses how the Project would incorporate Standard Project Measures **AQ-1** through **AQ-4** and Mitigation Measure **AQ-5** to avoid and minimize impacts related to air quality.

Per State CEQA Guidelines Section 15130(d), where a project is included in an approved regional transportation plan (among other land use plans) that adequately address the affected resource area, no additional analysis is required. Because the Project is listed, as currently proposed, in the region's currently conforming SCAG 2024–2050 RTP/SCS and 2025 Federal Transportation Improvement Program regional transportation planning documents, Project emissions would not be cumulatively considerable. However, short-term air quality impacts, taken into consideration with other relevant projects in the air quality RSA, would not result in cumulatively significant impacts under CEQA.

2.5.4.10 Climate Change

The analysis of greenhouse gas (GHG) emissions provided in Section 3.3, *Climate Change*, is a cumulative analysis in that it considers the emissions of traffic generated by existing and future planned land uses and the effects of other future planned transportation improvements. As discussed in Section 3.3, the Build Alternative (Preferred Alternative) would increase travel speeds and throughput (traffic flow), but operational GHG emissions would increase over time compared to existing conditions. Because operational emissions would increase, the Project would conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, the Build Alternative (Preferred Alternative) would contribute to cumulative impacts related to climate change under CEQA. Standard Project Measure **EN-1** would be implemented to help conserve energy. Mitigation Measures **GHG-1** through **GHG-4** and Mitigation Measure **AQ-5** are expected to reduce the Project's construction GHG emissions. Mitigation Measures **GHG-5** through **GHG-11** and **AQ-6** through **AQ-8** would reduce the GHG emissions and potential climate change impacts under CEQA from the operation and maintenance of the Project. However, the impacts

would remain significant and unavoidable under CEQA; refer to Section 3.3, *Climate Change*.

2.5.4.11 Noise

Although other nearby projects may be constructed during the same timeframe as the Project, it is not anticipated that temporary noise impacts would contribute to a cumulative effect within the cumulative RSA for noise. Construction-related worker commutes and equipment transport from the projected construction traffic would be minimal when compared with existing traffic volumes on I-15 and other affected streets, and the associated noise level changes would not be perceptible. Therefore, construction-related worker commutes and equipment transport noise impacts would be short term, intermittent, and overshadowed by local traffic noise.

Noise associated with the construction of the Project may overlap with noise from the construction of reasonably foreseeable projects. In general, doubling a noise source (introducing a new noise source of equal power) would result in a 3-decibel (dB) increase in the overall noise level. Therefore, construction noise from the Project and any reasonably foreseeable project would have to be near each other to be considered cumulatively considerable. Furthermore, a noise control plan (NCP) may be prepared for the Project (based on public comment), which will address construction noise monitoring, corrective actions, etc. (as discussed in the *I-15 Express Lanes Project Southern Extension Noise Study Report* [NSR]) as regulated by Caltrans' provisions in Section 14-8.02, "Noise Control," of the 2023 Standard Specifications and Special Provisions (SSP 14-8.02). The NCP would be edited specifically to include any other city and/or county provisions (as applicable) that regulate construction noise for this Project during the plans, specifications, and estimates phase; therefore, no adverse noise impacts from construction are anticipated.

The NSR analyzed the existing and design-year (No-Build and Build) conditions (Caltrans 2024). The design-year conditions take into account cumulative traffic growth from reasonably foreseeable projects and general growth throughout the region, with the No-Build condition representing the future baseline (without Project) and the Build condition representing the baseline plus Project (or Project contribution). As a result, the NSR effectively analyzes the cumulative traffic noise impacts associated with the Project. A list of projects included in the noise analysis is included in the NSR.

The NSR predicted that the inclusion of the Project (design-year Build condition) would result in a change of -2 dB to 2 dB over the design-year No-Build condition. A change of 3 dB is generally the accepted change at which the human ear begins to recognize differences in noise levels. Similarly, the NSR predicted a change of -26 dB to 9 dB (design-year No-Build versus existing) and -24 dB to 9 dB (design-year Build versus existing). As such, the design-year Build condition would not result in any appreciable change over the existing noise level relative to the design-year No-Build condition. Therefore, impacts from the Project would not have significant cumulative impacts under CEQA related to noise.

2.5.4.12 Energy

Because nearly all Project-related energy consumption would result from fuel use by vehicles and equipment during the construction period as well as vehicles during everyday operation of the Build Alternative (Preferred Alternative), for the purposes of this cumulative impacts discussion the only form of energy use considered is gasoline and diesel fuel use. Due to the specialized requirements for fuel formulation in California, the RSA for cumulative energy use is the State of California. For the purposes of fuel consumption, this cumulative impact discussion uses the list of past, present, and reasonably foreseeable projects list approach identified in State CEQA Guidelines Section 15130 (b)(1).

The Project, in combination with the projects identified in Table 2.5-1 as well as numerous other projects and ongoing operations of transportation facilities throughout the state, requires the use of gasoline and diesel fuel for construction and long-term operations. Direct diesel and gasoline consumption would result from the use of construction vehicles and equipment as well as from employee and maintenance trips during operation.

Short-term construction impacts include energy consumed by on and off-road vehicles and construction equipment. However, as discussed in Section 2.3.8, *Energy*, Standard Project Measure **EN-1** would be implemented to help conserve energy. This would include using recycled materials—including removed asphalt concrete pavement and cement concrete pavement—where feasible during construction. Standard Project Measure **EN-1** would be consistent with State and local policies to reduce energy consumption.

Operation of traffic lights, streetlights, sensors, and changeable message signs such as toll pricing signs consumes electricity. These features are required to manage traffic and provide safe driving conditions. Light-emitting diode (LED) fixtures would be used wherever traffic lights or streetlights are installed or replaced (Avoidance and Minimization Measure **EN-2**).

Indirect fuel consumption would result from redistribution of trips that would occur from capacity changes along the proposed alignment. The Build Alternative (Preferred Alternative) would result in increased fuel use compared to the No-Build Alternative, as shown in Table 2.3.8-3 (see Section 2.3.8, *Energy*). When compared to the Existing Conditions (2019), the Build Alternative (Preferred Alternative) would increase the annual energy consumption by 3,055 billion British thermal units (BTUs) (17.8 percent) in 2030 and by 973 billion BTUs (5.7 percent) in 2050. When compared to the Existing Conditions (2019), annual vehicle miles traveled are projected to increase by 62.0 percent in 2030 and by 67.4 percent by 2050 (Caltrans 2021). This disparity is attributed to fleet turnover, as older, less fuel-efficient vehicles are replaced by later-model, more fuel-efficient vehicles over time. These later-model replacement vehicles would also include hybrid and all-electric vehicles. Compared to the No-Build Alternative, the Build Alternative (Preferred Alternative) is projected to result in a 541-billion BTU increase (2.8 percent) in 2030 and a 332-billion BTU increase (1.9 percent) in 2050. This increase is not significant in the context of statewide consumption, as it would represent

approximately 0.001 percent of statewide energy consumption. As such, Project operation would not result in a wasteful, inefficient, or unnecessary consumption of energy. Therefore, the Project would not contribute to significant cumulative impacts under CEQA related to the consumption of energy.

2.5.4.13 Biological Resources

Natural Communities

Twenty-five vegetation communities and three land use types were identified in the BSA and 11 of the vegetation communities are classified as sensitive natural communities by the California Department of Fish and Wildlife (CDFW 2024). Of these 11 communities, seven would be affected by the Build Alternative (Preferred Alternative):

- Clustered tarweed fields: 0.09 acre of permanent impacts and 2.29 acres of temporary impacts
- Bush penstemon scrub: 0.96 acre of temporary impacts
- Holly leaf cherry—toyon—greenbark chaparral: 0.53 acre of temporary impacts
- Fremont cottonwood forest and woodland: 0.32 acre of temporary impacts
- Goodding's willow–red willow riparian woodland: 1.21 acres of temporary impacts
- Scale broom scrub: 0.18 acre of temporary impacts
- California sycamore woodland: 0.27 acre of shading impacts and 0.06 acre of temporary impacts

Indirect construction impacts on riparian and sensitive natural communities—including fire risks, litter, introduction of invasive species, habitat fragmentation, erosion and sedimentation, and introduction of hazardous materials—would be avoided and/or minimized through Avoidance and Minimization Measures **NC-2 (Natural Environment Study [NES] BIO-2)** through **NC-12 (NES BIO-12)** and **JPR-1**.

The anticipated impacts on sensitive natural communities by the Project would require compensatory mitigation. Under the MSHCP, compensation for these losses would be addressed through consistency with the MSHCP policies and regulations.

Generally, the Project BSA is in an already urbanized area; therefore, cumulative impacts on natural communities would be unlikely. Operation of the Build Alternative (Preferred Alternative) would not be expected to permanently affect wildlife movement or decrease the functionality of any wildlife crossings within the Project Area. The Project is identified in the MSHCP as a Planned Road and a Covered Activity (MSHCP Volume I, Section 7.3.5). Portions of the Project lie both inside and outside of Criteria Areas. Coverage under the MSHCP provides an expedited process for biological resource permitting and approvals, as well as compensatory mitigation under CEQA. For those MSHCP covered resources, no additional mitigation or requirements beyond

those necessitated by the MSHCP would be applied to the Project. Also, the Project is required to compensate for potential losses, and losses would be mitigated. As a result, the Build Alternative (Preferred Alternative) would not contribute to significant cumulative impacts under CEQA related to natural communities.

Wetlands and Other Waters

The resource area is located within southwestern Riverside County and consists of a developed freeway corridor connecting the Cities of Riverside and Corona to Lake Elsinore and San Diego County. The Temescal Wash riparian stream corridor conveys flows from Lake Elsinore to the Santa Ana River and runs parallel to the resource area. Prior to the development of the area, drainages from the adjacent Santa Ana Mountains and Gavilan Hills drained into the Temescal Wash. With the increased agricultural, residential, and commercial development, these drainages were channelized for flood control purposes. Furthermore, as a result of the construction of I-15 and urban development within the resource area, most of the natural vegetation has been removed and the historically present drainage features have been modified.

As indicated in Figure 2.5-1, the majority of other planned projects occur within the Arroyo del Toro-Temescal Wash and Bedford Wash-Temescal Wash portion of the cumulative RSA for wetlands. Other planned projects occur with the Dawson Canyon-Temescal Wash and Lake Elsinore subwatersheds of the Santa Ana River Watershed portions of the RSA, but to a lesser extent. The projects listed Table 2.5-1 are primarily located within previously disturbed areas, and, as such, would not be anticipated to substantially contribute to the loss of wetlands and other waters. Similar to the Project, the listed projects are subject to comply with applicable local, State, and federal regulations and policies protecting wetlands and other waters, as applicable.

U.S. Army Corps of Engineers/Regional Water Quality Control Board Jurisdiction Summary

As shown in Table 2.5-4, the Project would result in impacts on federal jurisdictional non-wetlands, including the permanent removal of 0.02 acre, temporary impacts on 2.02 acres, and shading impacts on 0.47 acre. A total of 0.03 acre of temporary impacts would occur on federal jurisdictional existing wetlands. There is anticipated to be 0.01 acre of permanent impacts and 0.19 acre of temporary impacts on potentially non-jurisdictional, non-wetland (constructed in uplands) Regional Water Quality Control Board jurisdictional waters of the State.

Table 2.5-4. U.S. Army Corps of Engineers/Regional Water Quality Control Board Jurisdictional Impacts

Agency/Jurisdiction	Hydrology	Permanent Impact (acres)	Temporary Impacts (acres)	Shading Impacts (acres)
CWA Section 404/401 Non-Wetland	Ephemeral, intermittent, and perennial	0.02	2.02	0.47
CWA Section 404/401 Wetland	Wetland	--	0.03	--
Grand Total CWA Section 404/401 Non-Wetland and Wetlands	**--**	**0.02**	**2.05**	**0.47**
Porter-Cologne Wetland	Wetland (isolated)	--	--	--
Potential Non-Jurisdictional Non-Wetland	Constructed in uplands	0.01	0.19	--
Grand Total Porter-Cologne Non-Wetland and Wetlands[1]	**--**	**0.01**	**0.19**	**--**

Notes: -- not applicable; grand totals are shaded gray in the table.
[1] Totals include features identified as "constructed in uplands" that may not be considered Regional Water Quality Control Board jurisdictional.

California Department of Fish and Wildlife Jurisdiction Summary

The Project would result in the permanent removal of 0.10 acre, temporary impacts on 3.79 acres, and shading impacts on 1.00 acre of state streambeds. A total of 2.26 acres of California Department of Fish and Wildlife (CDFW) riparian would be affected by the Project (<0.01 acre permanent, 1.80 acre temporary, and 0.46-acre shading effects). The proposed impacts on CDFW streambeds and associated riparian vegetation are summarized in Table 2.5-5, with a discussion of temporary, permanent, and shading impacts following below.

Table 2.5-5. Summary of Proposed Impacts on California Department of Fish and Wildlife Streambeds and Associated Riparian Vegetation

CDFW Jurisdictional Resource	Permanent Impact (acres)	Temporary Impact (acres)	Shading Impacts (acres)[1]
CDFW Unvegetated Streambed	0.10	3.79	1.00
Potential Non-Jurisdictional Unvegetated Streambed – Constructed in Uplands	0.02	0.91	--
Total Streambed	0.12	4.70	1.00
CDFW Riparian	<0.01	1.80	0.46
Total Riparian	<0.01	1.80	0.46
Grand Total	**0.12**	**6.50**	**1.47**

Direct and indirect impacts on U.S. Army Corps of Engineers/Regional Water Quality Control Board wetland and non-wetland waters of the U.S. and CDFW streambed and associated riparian habitat are to be avoided and minimized with Avoidance and Minimization Measures **NC-2 (NES BIO-2)** through **NC-13 (NES BIO-13)**, and **NC-19 (NES BIO-24)** in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **WET-1 (NES BIO-22)** in Section 2.4.2, *Wetlands and Other Waters*.

Implementation of Mitigation Measures **NC-16 (NES BIO-16)** and **JPR-2** in Section 2.4.1, *Natural Communities*, coordinates the mitigation required for permitting for the CDFW 1602 Streambed Alteration Agreement and the CWA 401 and 404 permitting. Details of the compensation for riparian/riverine (streambed) resources are included in the Determination of Biologically Equivalent or Superior Preservation report (Mitigation Measure **NC-15** [NES BIO-15, DBESP] in Section 2.4.1, *Natural Communities*). Mitigation Measure **NC-17 (NES BIO-17)** (in Section 2.4.1, *Natural Communities*) describes the option for compensatory mitigation for CDFW 1602 and CWA 401 and 404 permitting, and it references Mitigation Measure **TE-3 (NES BIO-23)** (in Section 2.4.5, *Threatened and Endangered Species*) regarding least Bell's vireo compensatory mitigation (to avoid duplicative mitigation). With the limited impacts of the Project along with the application of mitigation measures and compliance with Fish and Game Code 1602, and CWA 401 and 404 permitting, the Project's incremental contribution to cumulative impacts within the RSA would not be cumulatively considerable.

Plant Species

For federally and/or State-listed endangered or threatened plants, suitable habitat is present for Munz's onion (*Allium munzii;* federally listed as endangered [FE], State-listed as threatened [ST], California Rare Plant Rank [CRPR] 1B.1), San Diego ambrosia (*Ambrosia pumila;* FE, CRPR 1B.1), thread-leaved brodiaea (*Brodiaea filifolia;* federally listed as threatened [FT], State-listed as endangered [SE], CRPR 1B.1),

[1] Total acreage values may be off by 0.01 acre due to rounding.

slender-horned spineflower (*Dodecahema leptoceras;* FE, SE, CRPR 1B.1), and is within the rare plant RSA. All five of the species are Covered Species under the MSHCP with additional survey requirements within specified survey areas. The Project occurs within the MSHCP Narrow Endemic Plant Species (NEPS) Survey Area 1. Of the above species, where suitable habitat was noted to be present, NEPS Survey Area 1 includes requirements for surveys for the listed plant species Munz's onion, San Diego ambrosia, and slender-horned spineflower. The Project also occurs in NEPS Survey Area 7, where, of the above species, surveys for San Diego ambrosia are required. The Project is within MSHCP Criteria Area Survey Area 1, where, of the above species, surveys for thread-leaved brodiaea are required. Surveys are required per the MSHCP for San Jacinto Valley crownscale within the required survey area (Section 6.3.2 of the MSHCP). However, the Project is not within the required survey area for this species; therefore, this is an MSHCP Covered Species within the Project area. Suitable habitat for other listed rare plants was not observed within the rare plant RSA.

During focused rare plant surveys, no listed rare plant species were observed within the rare plant RSA. All MSHCP-required rare plant surveys were conducted.

Non-listed Special-status MSHCP Plant Species

During rare plant focused surveys in 2020 and 2021, none of the Criteria Area Plant Species Survey Area 1 and NEPS Survey Area 1 species and seven non-listed special-status plant species were observed. Therefore, no impacts would occur. Long-spined spineflower was found; however, this species is fully covered under the MSHCP. No other Covered Species were detected; however, these could occur in the Project vicinity. No avoidance or minimization measures and no compensatory mitigation would be required for non-listed special-status plant species.

Non-Listed Special-Status Non-MSHCP Plant Species

During rare plant focused surveys in 2020 and 2021, no non-MSHCP non-listed special-status plant species were observed. These species are therefore considered absent from the BSA.

Although long-spined spineflower was found to be present within the rare plant RSA, the species is fully covered under the MSHCP. Implementation of Avoidance and Minimization Measures **NC-1 (NES BIO-1)** through **NC-12 (NES BIO-12)**, described in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **JPR-1** described in Section 2.4.6, *Invasive Species*, would reduce the potential for temporary indirect impacts on long-spined spineflower adjacent to the limits of disturbance (LOD). These measures would also protect adjacent native flora and fauna associated with long-spined spineflower in the BSA during construction.

Summary

With implementation of mitigation and compliance with the MSHCP, the Project would have a less-than-significant impact on candidate, sensitive, or special-status plant species. Therefore, the Project, in combination with other planned projects, would not result in substantial cumulative impacts on special-status plant species.

Animal Species

Thirty-three non-listed special-status animal species have suitable habitat within the BSA, as detailed in Section 2.4.4, *Animal Species*. Focused studies were performed for bats due to presence of suitable habitat within the BSA. No special-status bats were observed. No other focused studies were performed for non-listed special-status animals or candidate species.

Three non-listed, MSHCP covered, special-status animal species were detected during biological surveys: Belding's orange-throated whiptail, yellow warbler, and yellow-breasted chat. Belding's orange-throated whiptail is a year-round resident for this region, and yellow warbler and yellow-breasted chat are summer residents. Although there is suitable habitat in the BSA for additional MSHCP covered species, they were not detected during surveys.

The BSA contains 1,295.63 acres of suitable habitat for these non-listed MSHCP covered animal species in the form of grasslands, shrublands, forests and woodlands, riparian habitats, and agricultural areas. Potential suitability of the habitats ranges from low quality to high quality, with areas within and directly adjacent to the LOD providing low quality and areas farther from the LOD providing higher quality.

There are 12 non-listed special-status species that are not covered under the MSHCP. Suitable habitat is present throughout the BSA within native vegetation communities and open areas. Although there is suitable habitat in the BSA for these species, none were detected during surveys; however, focused surveys were not performed.

Avoidance and minimization measures would reduce or avoid indirect impacts on non-listed special-status wildlife species for both those covered and not covered by the MSHCP. Those measures include **NC-2 (NES BIO-2)** through **NC-13 (NES BIO-13)** and **NC-18 (NES BIO-20)**, **NC-19 (NES BIO-24)** in Section 2.4.1, *Natural Communities*, and Avoidance and Minimization Measure **AS-1 (NES BIO-18)** in Section 2.4.4, *Animal Species*.

For non-MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measures would apply to reduce and avoid potential impacts: Avoidance and Minimization Measures **NC-1 (NES BIO-1)**, **NC-10 (NES BIO-10)**, **NC-12 (NES BIO-12)**, **NC-13 (NES BIO-13)** and **NC-18 (NES BIO-20**) in Section 2.4.1, *Natural Communities*, Avoidance and Minimization Measure **TE-2 (NES BIO-21)** in Section 2.4.5, *Threatened and Endangered Species*, and Avoidance and Minimization Measure **AS-5 (NES BIO-28**) in Section 2.4.4, *Animal Species***.**

In addition to the above measures for non-MSHCP covered special-status wildlife species, the following avoidance and minimization measures would reduce and avoid potential impacts on bats: **AS-3 (NES BIO-26)** and **AS-4 (NES BIO-27)**.

For MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measures would reduce or avoid impacts: Avoidance and Minimization Measures **NC-1 (NES BIO-1)**, **NC-10 (NES BIO-10)**, **NC-12 (NES BIO-12)**, **NC-13 (NES**

BIO-13), **NC-14 (NES BIO-14)**, **NC-18 (NES BIO-20)**, **TE-2 (NES BIO-21)**, and **AS-5 (NES BIO-28)**.

Development of the median into active traffic lanes may reduce the chance of an animal successfully reaching the other side when crossing the highway, although the number of animals this may directly affect is not known. However, the capacity for wildlife movement across I-15 is already poor, with roadkill frequently observed. Such capacity has also been degraded over past decades by the increasing width of the interstate, traffic flows, and noise. Although the Project would not improve this situation, it is not expected to substantially worsen current operational impacts on wildlife movement or connectivity or roadkill incidents.

Overall, the Project is not expected to substantially affect wildlife movement or linkage functions and values within the BSA because major wash crossings under I-15 bridges would be retained, including the priority linkages at Bedford Wash and Indian Wash.

With Project measures and implementation of mitigation and compliance with the MSHCP, the Project would have a less-than-significant impact on candidate, sensitive, or special-status wildlife and plant species. The Project has been designed to be consistent with the MSHCP and, as such, would receive "take" coverage for MSHCP Covered Species. In addition, the projects listed in Table 2.5-1 would also need to comply with local laws and regulations regarding special-status animal species. Therefore, the Project in combination with other planned projects would not result in significant cumulative impacts under CEQA related to special-status animal species.

Threatened and Endangered Species

There are 19 listed species that have potential to occur within the BSA and could be affected by the Project, with the exception of the San Diego fairy shrimp, monarch butterfly, and Crotch bumble bee, which are Covered Species under the MSHCP. As discussed in Section 2.4.5, *Threatened and Endangered Species*, no impacts are anticipated on monarch butterfly or Crotch bumble bee within the LOD. Permanent, temporary, and shading impacts on suitable habitat for nine listed species are summarized below in Table 2.5-6.

Table 2.5-6. Potential Impacts of the Build Alternative (Preferred Alternative) on Listed Species

Listed Species	Impact (acres)			
	Permanent	Temporary	Shading	Total
Listed plants	Not present			
Fairy shrimp	Not present			
Crotch bumble bee	No direct effects expected			
Monarch butterfly	No direct effects expected			
Quino checkerspot butterfly[1]	13.84	226.46	0.29	240.59
Arroyo toad[1]	0.00	2.65	0.22	2.87

Listed Species	Impact (acres)			
	Permanent	**Temporary**	**Shading**	**Total**
Least Bell's vireo	0.00	2.76	0.19	2.95
Southwestern willow flycatcher	Not present			
Burrowing owl	20.65	93.83	0.41	114.89
Tricolored blackbird[1]	0.00	3.38	0.19	3.57
Coastal California gnatcatcher[1]	3.33	129.15	0.07	132.55
Stephens' kangaroo rat[1]	13.84	225.80	0.47	240.11
San Bernardino kangaroo rat	13.67	190.46	0.47	204.60
Mountain lion[1]	13.85	234.19	0.66	248.70

[1] MSHCP fully covered species

Temporary indirect effects during construction for these listed species, should the species be present, include impacts on habitat, construction-related disturbances (e.g., noise, night lighting, increased human and equipment presence, opportunistic predators, increase in dust and wildfire risk, and vibration), and individual breeding occurring adjacent to the LOD. However, with Avoidance and Minimization Measures **TE-1 (NES BIO-29)**, **TE-2 (NES BIO-21)**, **TE-4**, **TE-5,** and **JPR-3** and Mitigation Measure **TE-3 (NES BIO-23)** described in Section 2.4.5, *Threatened and Endangered Species*, temporary indirect effects would be avoided or greatly minimized and temporary impacts would be compensated at no less than a 1:1 ratio.

In addition to the above measures to reduce or avoid impacts on MSHCP covered special-status wildlife species, a burrowing owl avoidance and minimization measure would reduce or avoid potential impacts: Avoidance and Minimization Measure **AS-2 (NES BIO-25)** in Section 2.4.5, *Threatened and Endangered Species*.

Operation and maintenance associated with the Build Alternative (Preferred Alternative) is not expected to differ measurably from existing operating conditions along I-15. The potential direct and indirect effects associated with operation and maintenance of the Build Alternative (Preferred Alternative) include the introduction of invasive weeds, air pollution, noise, and risk of fire. These potential indirect effects would not be greater than effects from existing conditions. Permanent impacts for the potential removal of acres of potentially suitable habitat for the listed species in Table 2.5-6 could be biologically substantial and would trigger Federal Endangered Species Act and California Endangered Species Act considerations. However, as discussed in Section 2.4.5, because many of the species are fully covered under the MSHCP, and the Project has been designed to be consistent with the MSHCP, potential impacts from the Project would be minimized and avoided for listed species present in the BSA. Additionally, permanent impact compensation would occur at no less than a 2:1 ratio, resulting in a larger amount of habitat than what currently exists. Overall, the Project in combination with other planned projects would not result in significant cumulative impacts under CEQA related to threatened and endangered species.

Invasive Species

The Build Alternative (Preferred Alternative) would not substantially increase the potential for spread of invasive species. Compliance with invasive species control procedures (refer to Avoidance and Minimization Measures **NC-3 [NES BIO-3]**), to minimize the chance of human-caused wildfires, which can increase the prevalence of invasive plant species; **NC-6 (NES BIO-6)**, to avoid incidental disturbance of habitat outside of the LOD (supported by **NC-5 [NES BIO-5]**); **NC-9 (NES BIO-9)**, to avoid removing native vegetation and return temporarily affected areas to pre-existing contours and revegetating; **NC-7 (NES BIO-7)**, to properly dispose of exotic species removed during construction and avoid the use of invasive plant species adjacent to Riverside County MSHCP Conservation Areas; **NC-8 (NES BIO-8)**, where equipment will be cleaned of mud and debris that may contain invasive plants and/or seeds before mobilizing to the site; and **NC-10 (NES BIO-10)** and **JPR-1**, to revegetate any temporarily disturbed areas post-construction, which will prevent colonization by invasive plant species. These measures, as described in Section 2.4.1, Natural Communities, would address this impact. In addition, the other projects listed in Table 2.5-1, above, would also be subject to local laws and regulations regarding invasive species. Therefore, the Build Alternative (Preferred Alternative) would not contribute to significant cumulative impacts under CEQA related to invasive species.

Chapter 3 California Environmental Quality Act (CEQA) Evaluation

The proposed Project is a joint project by Caltrans and FHWA and is subject to state and federal environmental review requirements. Project documentation, therefore, has been prepared in compliance with both CEQA and NEPA. FHWA's responsibility for environmental review, consultation, and any other actions required by applicable Federal environmental laws for this Project are being, or have been, carried out by Caltrans pursuant to 23 USC 327 and the Memorandum of Understanding dated May 27, 2022, and executed by FHWA and Caltrans. Caltrans is the lead agency under CEQA and NEPA.

One of the primary differences between NEPA and CEQA is the way significance is determined. Under NEPA, significance is used to determine whether an Environmental Impact Statement, or a lower level of documentation, will be required. NEPA requires that an Environmental Impact Statement be prepared when the proposed federal action (project) *as a whole* has the potential to "significantly affect the quality of the human environment." The determination of significance is based on context and intensity. Some impacts determined to be significant under CEQA may not be of sufficient magnitude to be determined significant under NEPA. Under NEPA, once a decision is made regarding the need for an Environmental Impact Statement, it is the magnitude of the impact that is evaluated and no judgment of its individual significance is deemed important for the text. NEPA does not require that a determination of significant impacts be stated in the environmental documents.

CEQA, on the other hand, does require Caltrans to identify each "significant effect on the environment" resulting from the project and ways to mitigate each significant effect. If the project may have a significant effect on any environmental resource, then an Environmental Impact Report must be prepared. Each and every significant effect on the environment must be disclosed in the Environmental Impact Report and mitigated if feasible. In addition, the CEQA Guidelines list a number of "mandatory findings of significance," which also require the preparation of an Environmental Impact Report. See the SER, Volume 1, Chapter 36, "Environmental Impact Reports" for more information. There are no types of actions under NEPA that parallel the findings of mandatory significance of CEQA. This chapter discusses the effects of this Project and CEQA significance.

3.1 CEQA ENVIRONMENTAL CHECKLIST

This checklist identifies physical, biological, social, and economic factors that might be affected by the proposed Project. In many cases, background studies performed in connection with the projects will indicate that there are no impacts to a particular resource. A NO IMPACT answer in the last column reflects this determination. The words "significant" and "significance" used throughout the following checklist are related

to CEQA, not NEPA, impacts. The questions in this form are intended to encourage the thoughtful assessment of impacts and do not represent thresholds of significance.

Project features, which can include both design elements of the Project, and standardized measures that are applied to all or most Caltrans projects such as Best Management Practices and measures included in the Standard Plans and Specifications or as Standard Special Provisions, are considered to be an integral part of the Project and have been considered prior to any significance determinations documented below; see Chapters 1 and 2 for a detailed discussion of these features. The annotations to this checklist are summaries of information contained in Chapter 2 in order to provide the reader with the rationale for significance determinations; for a more detailed discussion of the nature and extent of impacts, please see Chapter 2. This checklist incorporates by reference the information contained in Chapters 1 and 2.

3.1.1 Aesthetics

Except as provided in Public Resources Code Section 21099, would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

3.1.1.1 CEQA Significance Determinations for Aesthetics

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts on aesthetics was assessed in the *Interstate 15 (I-15) Express Lanes Project Southern Extension Visual Impact Assessment* (Caltrans 2024a) and Section 2.2.9, *Visual/Aesthetics*, in this Environmental Impact Report (EIR)/Environmental Assessment (EA). The following discussions are based on those analyses.

a) Have a substantial adverse effect on a scenic vista?

No Impact

The Project is on the mainline segment of Interstate (I-) 15 between post mile (PM) 21.2 in the City of Lake Elsinore and PM 38.1 in the City of Corona in Riverside County. The Project corridor also includes a portion of unincorporated Riverside County, including the Temescal Valley community. The Project area consists of both urban and rural areas along the I-15 transportation corridor. The landscape is characterized by local hillsides and distant mountains, with predominantly urban landcover and pockets of rural communities. The Project area consists of predominantly residential, commercial, and industrial development. Mountain ranges visible in the area include the Santa Ana Mountains to the west and the San Gabriel Mountains to the north, and the Gavilan Hills are east of the Project corridor. Riparian areas include Gavilan Wash, Temescal Wash, Horsethief Canyon Wash, Indian Wash, Mayhew Wash, Coldwater Wash, Brown Canyon Wash, and Bedford Wash, adjacent to I-15.

The Project would not result in adverse visual changes. Project components under the Build Alternative (Preferred Alternative) would be designed and implemented in a manner consistent with the existing visual character and quality of the area and would not diminish visual resources. Construction of Project components would occur within the existing California Department of Transportation (Caltrans) right of way, resulting in similar conditions to the existing I-15 corridor. The Project would connect to the existing regional network of express lane systems, which feature a similar design and scale. Viewsheds containing identified visual resources would not be affected by implementation of the Project. There would be no impact under the Build Alternative (Preferred Alternative).

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact

The Project is not within a designated State Scenic Highway; as such, a scenic resource evaluation was not prepared for the Project. As the Project is in the median of an existing highway that is not a designated State Scenic Highway, there would be no impact on scenic resources associated with a State scenic highway.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Less-than-Significant Impact

During construction, travelers may experience minor short-term visual impacts from the presence of construction equipment. Viewsheds containing identified visual resources

are not expected to be affected by implementation of the Project because the overall visual character of the Project is considered low. The Build Alternative (Preferred Alternative) would not substantially change the existing views of or from I-15. Although potential visual impacts do not exceed the moderately low level, Avoidance and Minimization Measures **AES-1** through **AES-4** would further minimize or avoid visual impacts associated with the Build Alternative (Preferred Alternative).

The visual analysis determined that, once operational, the Project would result in low or moderately low visual impacts within each Key View. Additionally, the design of the Build Alternative (Preferred Alternative) would be consistent with Caltrans highway landscape and design policies/Best Management Practices (BMPs). Impacts would be less than significant.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less-than-Significant Impact

The Build Alternative (Preferred Alternative) is expected to require nighttime construction, in addition to night security lighting of staging areas, which would result in visual impacts for highway travelers from increased glare. In addition, multiple residential areas adjacent to the Project corridor may be affected by new sources of light or glare during construction. The impacts from construction of the Build Alternative (Preferred Alternative) would be temporary and would not affect visual resources long term. Lighting during construction would result in minimal impacts on the surrounding environment, as the Project would use downcast, cut-off type fixtures that would be shielded and direct the light only toward areas requiring illumination (Avoidance and Minimization Measure **AES-4**). Electronic toll collection gantries would result in the creation of new sources of light or glare. However, Avoidance and Minimization Measure **AES-4** ensures that highway lighting must conform to Caltrans design guidelines and be placed to illuminate only intended areas. Impacts would be less than significant.

3.1.2 Agriculture and Forest Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and the forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

3.1.2.1 CEQA Significance Determinations for Agriculture and Forest Resources

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact

No agricultural uses exist within the Project footprint or immediately adjacent to the Project. The Project footprint is defined as the limits of all disturbance and activity associated with the Project. Because the land within or adjacent to the Project footprint is not designated as farmland pursuant to the Farmland Mapping Monitoring Program of the California Resources Agency, the Build Alternative (Preferred Alternative) would not have the potential to result in the conversion of farmland to a non-agricultural use. Therefore, no impacts related to farmland conversion would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact

There are no parcels under a Williamson Act contract within the Project limits. No impact would occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact

There are no forest or timberlands within the Project limits. Therefore, the Project does not currently use land being managed or used for forest land or timberland. No impact would occur.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact

There are no farmlands or forest land within the Project limits. There are no changes anticipated to farmland or forest land. No impact would occur.

3.1.3 Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations.				
Would the project:	**Significant and Unavoidable Impact**	**Less Than Significant with Mitigation Incorporated**	**Less Than Significant Impact**	**No Impact**
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

3.1.3.1 CEQA Significance Determinations for Air Quality

This section was prepared using information from the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Air Quality Report* (Caltrans 2022a) and Section 2.3.6, *Air Quality*, of this EIR/EA. The following discussions are based on those analyses.

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less-than-Significant Impact

The Project is in the South Coast Air Basin and is within the jurisdiction of the South Coast Air Quality Management District (SCAQMD) and the California Air Resources Board (ARB). SCAQMD is the primary agency responsible for writing the Air Quality Management Plan (AQMP) in cooperation with the Southern California Association of Governments (SCAG), local governments, and the private sector. The AQMP provides the blueprint for meeting State and federal ambient air quality standards. The Project is listed in the 2024–2050 financially constrained Connect SoCal 2024–2050 Regional

Transportation Plan (RTP)/Sustainable Communities Strategy (SCS), which was adopted by the SCAG Regional Council in April 2024; the Federal Highway Administration (FHWA) and the Federal Transit Administration made a regional conformity determination finding on May 10, 2024. The Project is also included in 1) SCAG's financially constrained 2025 Federal Transportation Improvement Program (FTIP) (Amendment 25-12, Riverside County State Highway – Project Listing), adopted by SCAG on August 5, 2025, and approved by FHWA and the Federal Transit Administration on August 19, 2025; and 2) Administrative Modification #25-14, which was approved by SCAG on September 23, 2025. The design concept and scope of the Project are consistent with the Project description in the 2024–2050 RTP/SCS, the 2025 FTIP, and the open-to-traffic assumptions of the most recent SCAG regional emissions analysis.

The Project is in a nonattainment area for the federal and State 8-hour ozone (O_3) standards, the State 1-hour O_3 standard, the federal and State particulate matter smaller than 2.5 micrometers in diameter ($PM_{2.5}$) standards, and the State particulate matter smaller than 10 micrometers in diameter (PM_{10}) standards. In addition, the Project is in a maintenance area for the federal PM_{10}, carbon monoxide (CO), and nitrogen dioxide (NO_2) standards. Conformity analyses demonstrate that the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations, or delay timely attainment of any National Ambient Air Quality Standards or any required interim emission reductions or other milestones during the timeframe of the transportation plan (or regional emissions analysis); refer to Section 2.3.6, *Air Quality*. Impacts would be less than significant. Therefore, the Project would not conflict with the AQMP, violate any air quality standards, result in a net increase of any criteria pollutant, or expose sensitive receptors to substantial pollutant concentrations. Impacts would be less than significant.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Significant and Unavoidable Impact

As discussed in Section 2.3.6, *Air Quality*, the Project has satisfactorily demonstrated the Project-level conformity requirements and is not anticipated to worsen existing PM_{10} and $PM_{2.5}$ violations and delay timely attainment of the standards. FHWA approval of the Air Quality Conformity Report was received on July 10, 2025. Therefore, the Project is not anticipated to cause or contribute to any new violation of the federal standards of the criteria pollutants.

The regional emission analysis presented in Table 2.3.6-10 indicates that operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase PM_{10} and $PM_{2.5}$ emissions when compared to both the existing and no-build conditions. As it is located within a nonattainment area for the state PM_{10} and $PM_{2.5}$ ambient air quality standards, the Project-related increase would be a cumulative impact under CEQA. However, the

Riverside County Transportation Commission (RCTC) has committed to air quality mitigation measures to reduce AQ impacts: Mitigation Measures **AQ-5** through **AQ-8**. For these four air quality mitigation measures, RCTC has committed to numerous programs to encourage Riverside County residents to use public transportation more often on a permanent basis, which is intended to reduce vehicle travel and emissions. This directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. These programs prioritize equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options. See sub-section 2.3.6.4, *Avoidance, Minimization, and/or Mitigation Measures for Air Quality*, for the full measure text for Mitigation Measures **AQ-5** through **AQ-8**. Even with implementation of Mitigation Measures **AQ-5** through **AQ-8**, impacts are considered to be significant and unavoidable.

c) Expose sensitive receptors to substantial pollutant concentrations?

Less-than-Significant Impact

The sensitive receptors within or adjacent to the Project limits are residential, educational, park, and church uses. The Project may result in temporary, short-term, construction-related increases in pollutant concentrations specifically associated with construction equipment emissions and fugitive dust. Implementation of the SCAQMD Rules and Caltrans Standard Construction Specifications—which are provided in Standard Project Measures **AQ-1** through **AQ-4** in Section 2.3.6, *Air Quality*, and are standard for all Caltrans projects—would avoid or minimize potential short-term air quality impacts on sensitive receptors.

Operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase PM_{10} and $PM_{2.5}$ emissions compared with existing conditions and decrease reactive organic gas, nitrogen oxide, and CO emissions. As discussed in threshold (a), the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. Impacts are considered less than significant.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less-than-Significant Impact

The Project may result in temporary, short-term, construction-related increases in objectionable odors. However, SCAQMD Rules and Standard Project Measure **AQ-4** described in Section 2.3.6, *Air Quality*, and are standard for all Caltrans projects—would minimize this potential short-term impact. Impacts are considered less than significant.

3.1.4 Biological Resources

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☒	☐	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☒	☐	☐
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☒	☐	☐

3.1.4.1 CEQA Significance Determinations for Biological Resources

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts on biological resources was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Natural Environment Study Including Focused Studies for Special-Status Species and a Delineation of Federal and State Jurisdictional Waters* (Caltrans 2023b) and in Sections 2.4.1 through 2.4.6 of this EIR/EA. The following discussions are based on those analyses.

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?

Less than Significant with Mitigation Incorporated

As discussed in the following text, the Project has been designed to be consistent with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP); as such, it would receive "take"[1] coverage for MSHCP covered species. The database used to create the MSHCP did not have enough detail to map the extent of the presence or distribution of some species within the MSHCP Area. For these species, "Additional Survey Needs and Procedures" were developed within specifically mapped areas. Within these mapped areas, there is no "take" covered for these species. For instance, there is "take" for San Bernardino kangaroo rat (SBKR; *Dipodomys merriami*

[1] "Take" defined under the U.S. Fish and Wildlife Service Federal Endangered Species Act, Section 3 (19) as to harass, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in such conduct.

parvus) outside of the Additional Survey Needs and Procedures mapped areas; however, within the mapped areas additional studies—including a habitat assessment and, if habitat is present, a focused survey—are required. Within the Project area, SBKR is not within the Additional Survey Needs and Procedures mapped area, so the Project has "take" coverage for this species.

Federally and/or State-listed Endangered or Threatened Wildlife

Suitable habitat was determined to occur within the biological study area (BSA) for:

- Tricolored blackbird (*Agelaius tricolor*; State-listed as threatened [ST], MSHCP covered)
- Coastal California gnatcatcher (*Polioptila californica californica*; federally listed as threatened [FT], California species of special concern [CSC], MSHCP covered)
- Stephens' kangaroo rat (SKR; *Dipodomys stephensi*; FT, ST, MSHCP covered; SKR Habitat Conservation Plan [HCP])
- SBKR (federally listed as endangered [FE], State-listed as candidate endangered [CE], MSHCP Additional Survey Needs and Procedures [Section 6.3.2]; but outside of required survey area, MSHCP covered species)
- Quino checkerspot butterfly (*Euphydryas editha quino*; FE, MSHCP covered)
- Mountain lion *(Puma concolor;* candidate federally endangered [CFE], MSHCP covered)
- Arroyo toad (*Anaxyrus californicus*; FE, MSHCP Additional Survey Needs and Procedures [Section 6.3.2]; but outside of required survey area, MSHCP covered)
- Bald eagle (federally delisted, State-listed as endangered [SE], MSHCP covered)
- Burrowing owl (*Athene cunicularia*; State-listed candidate [SC], MSHCP Additional Survey Needs and Procedures [Section 6.3.2]; within required survey area, no burrowing owls observed)
- Western spadefoot (*Scaphiopus hammondii;* Federally proposed threatened [PT], CSC, MSHCP covered)

Because all these species are covered under the MSHCP, compliance with the MSHCP would afford "take" coverage for all these species and no additional discussion related to these species is included.

Table 3-1. Federally and/or State-Listed Endangered or Threatened Wildlife Species Summary

Common Name	Species Name	Federal Status	State Status	MSHCP Status	Suitable Habitat Present	Avoidance Measures Required	Mitigation Required*
Tricolored blackbird	*Agelaius tricolor*	n/a	Threatened	Covered	Yes	Yes	No
Coastal California gnatcatcher	*Polioptila californica californica*	Threatened	Species of special concern	Covered	Yes	Yes	No
Stephens' kangaroo rat (SKR)	*Dipodomys stephensi*	Threatened	Threatened	Covered; SKR HCP	Yes	Yes	No
San Bernardino kangaroo rat (SBKR)	*Dipodomys merriami parvus*	Endangered	Candidate endangered	Section 6.3.2 of the MSHCP; additional surveys required (RCIP 2003)	Yes, but not within MSHCP required survey area; covered	Yes	No
Quino checkerspot butterfly	*Euphydryas editha quino*	Endangered	n/a	Covered	Yes	Yes	No
Mountain lion	*Puma concolor*	Candidate endangered	n/a	Covered	Yes	Yes	No
Arroyo toad	*Anaxyrus californicus*	Endangered	n/a	Section 6.3.2 of the MSHCP; additional surveys required	Yes, but not within MSHCP required survey area; covered	Yes	No

Common Name	Species Name	Federal Status	State Status	MSHCP Status	Suitable Habitat Present	Avoidance Measures Required	Mitigation Required*
Western spadefoot	*Scaphiopus hammondii*	Proposed threatened	CSC	Covered	Yes	Yes	No
Bald eagle	*Haliaeetus leucocephalus*	Delisted	Endangered	Covered	Yes, but no nesting habitat is present; foraging only	No	No
Riverside fairy shrimp	*Streptocephalus woottoni*	Endangered	n/a	Section 6.1.2 of the MSHCP, Protection of Species Associated with Riparian/ Riverine Areas, and Vernal Pools (RCIP 2003); additional surveys required	Yes, surveys conducted; not observed	No	No
San Diego fairy shrimp	*Branchinecta sandiegonensis*	Endangered	n/a	Not MSHCP covered	Yes, surveys conducted; not observed	No	No

Common Name	Species Name	Federal Status	State Status	MSHCP Status	Suitable Habitat Present	Avoidance Measures Required	Mitigation Required*
Vernal Pool Fairy Shrimp	*Branchinecta lynchi*	Threatened	n/a	Section 6.1.2 of the MSHCP; additional surveys required	Yes, surveys conducted; not observed	No	No
Least Bell's Vireo (LBV)	*Vireo bellii pusillus*	Endangered	Endangered	Section 6.1.2 of the MSHCP; additional surveys required	Yes, surveys conducted; 11 use areas observed; not within limits of disturbance	Yes	No, unless LBV territories enter Project area
Southwestern Willow Flycatcher (SWFL)	*Empidonax traillii extimus*	Endangered	Endangered	Section 6.1.2 of the MSHCP; additional surveys required	Yes, surveys conducted; not observed	No	No
Burrowing owl	*Athene cunicularia*	None	Candidate	Section 6.3.2 of the MSHCP; additional surveys required	Yes, surveys conducted, not observed	Yes	No

Common Name	Species Name	Federal Status	State Status	MSHCP Status	Suitable Habitat Present	Avoidance Measures Required	Mitigation Required*
Crotch Bumble Bee	*Bombus crotchii*	n/a	Candidate	Not MSHCP covered	Low potential to occur in limits of disturbance (LOD); surveys not conducted	Yes	No
Monarch Butterfly**	*Danaus plexippus* pop. 1	Candidate	n/a	Not MSHCP covered	Low potential to occur in LOD, with no potential for roosting in LOD	Yes	No

* Impacts on MSHCP covered species are considered fully addressed through consistency with the MSHCP. This column refers to any additional mitigation requirements beyond MSHCP consistency.
** Discussed under Non-listed Special-status Wildlife Species
n/a = not applicable

Suitable habitat was present for Riverside fairy shrimp (*Streptocephalus woottoni;* FE), San Diego fairy shrimp (*Branchinecta sandiegonensis;* FE), and vernal pool fairy shrimp (*Branchinecta lynchi;* FT). Additional surveys where potential habitat is present are required for both Riverside fairy shrimp and vernal pool fairy shrimp to achieve consistency with the MSHCP. Surveys were conducted for these species and were negative; therefore, no Avoidance and Minimization Measures would be required for listed fairy shrimp species.

Suitable habitat is present for least Bell's vireo (LBV; *Vireo bellii pusillus*; FE, SE) and southwestern willow flycatcher (SWFL; *Empidonax traillii extimus*; FE, SE), both of which are covered under the MSHCP but are not yet adequately conserved, with focused surveys required when suitable habitat is present that may be directly or indirectly affected (Section 6.1.2 of the MSHCP). Riparian bird surveys were conducted for LBV and SWFL. There are 88.43 acres of potentially suitable habitat for LBV within the riparian bird study area. Eleven LBV use areas were detected within the riparian bird survey area, with most use areas associated with Temescal Wash. However, none of the use areas occur within the limits of disturbance (LOD), so no direct effects on LBV are anticipated. There are 61.32 acres of potentially suitable habitat for SWFL in the riparian bird study area. SWFL was not observed during the focused surveys and is presumed absent; therefore, no direct effects are anticipated on this species.

The following Avoidance and Minimization Measures, which are required for all covered activities under the MSHCP, shall be implemented to ensure that indirect construction impacts on listed, MSHCP covered threatened and/or endangered wildlife species are avoided and/or minimized.

NC-13 (NES BIO-13)
NC-14 (NES BIO-14)
NC-18 (NES BIO-20)
TE-2 (NES BIO-21)
AS-5 (NES BIO-28)

The Project was redesigned to avoid LBV use areas, and, while not anticipated, LBV territories could fluctuate from season to season. Given the number of LBV use areas and the proximity of these use areas to the Project, it is possible that LBV use areas may conflict with the construction footprint due to changes in nesting territories prior to the initiation of construction. While no direct impacts on LBV are anticipated, as a precaution, if LBV use areas were to occur within the construction area, measures have been included to address direct construction impacts on LBV if they were to occur as a part of the Project, with potentially significant impacts. If this were to happen, with the implementation of the Mitigation Measure below, significant direct construction impacts on LBV would be reduced to less-than-significant levels:

TE-3 (NES BIO-23)

In addition to the above measure, the following Avoidance and Minimization Measure would be required to avoid direct and indirect construction impacts on LBV:

JPR-3

In addition to the above measures for direct impacts on MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measure would be required for burrowing owls:

AS-2 (NES BIO-25)

Crotch bumble bee (*Bombus crotchii*; CE), which is not a covered species under the MSHCP, has a moderate potential to occur in the BSA but a low potential to occur in the LOD due to the high level of disturbance in the LOD and the lack of resources necessary for the natural life history of this species (food plant genera include *Antirrhinum* spp*., Phacelia* spp*., Clarkia* spp*., Dendromecon* spp*., Eschscholzia* spp., and *Eriogonum* spp., which are found in scrub habitat and open grassland areas with low disturbance levels). The LOD is too disturbed to support the food plants for this species, and ongoing disturbance prevents the success of nests (nests in the ground in rodent burrows or above ground in logs etc.). Surveys were not conducted for this species because of the low potential for this species to occur within the LOD due to the high level of disturbance.

The following Avoidance and Minimization Measures shall be implemented to ensure that indirect and direct construction impacts on Crotch bumble bee are avoided and/or minimized.

Federally and/or State-listed Endangered or Threatened Plants

Suitable habitat is present within the rare plant study area for the following federally and/or State-listed plants:

- Munz's onion (*Allium munzii;* FE, ST)
- San Diego ambrosia (*Ambrosia pumila*; FE)
- thread-leaved brodiaea (*Brodiaea filifolia;* FT, ST)
- slender-horned spineflower (*Dodecahema leptoceras;* FE, SE)
- San Jacinto Valley crown scale (*Atriplex coronata* var*. notatior;* FE)

All five of the species are covered species under the MSHCP, with additional survey requirements within specified survey areas. The Project occurs within the MSHCP Narrow Endemic Plant Species (NEPS) Survey Area 1. Of the above species, where suitable habitat was noted to be present, NEPS Survey Area 1 includes requirements for surveys for the following listed plant species: Munz's onion, San Diego ambrosia, and slender-horned spineflower. The Project also occurs in NEPS Survey Area 7, where, of the above species, surveys for San Diego ambrosia are required. The Project is within MSHCP Criteria Area Survey Area 1, where, of the above species, surveys for thread-leaved brodiaea are required.

In accordance with Section 6.3.2 of the MSHCP, surveys are required for San Jacinto Valley crownscale within the required survey area. However, the Project is not within the required survey area for this species; therefore, this is an MSHCP covered species within the Project area. Suitable habitat for other listed rare plants was not observed within the rare plant study area.

During focused rare plant surveys, no listed rare plant species were observed within the rare plant study area; therefore, impacts are not expected, and no Avoidance and Minimization Measures would apply for listed plants. All MSHCP–required rare plant surveys were conducted.

Non-listed Special-status Wildlife Species

Thirty-two non-listed special-status species have suitable habitat within the BSA: one fish, one insect, one amphibian, eight reptiles, ten birds, and eleven mammals. Focused studies were performed for six bat species due to presence of suitable habitat within the BSA. While focused studies are not required for the nine non-listed special-status animals not covered under the MSHCP, during other biological surveys—including special-status plant surveys, LBV surveys, SWFL surveys, bat surveys and tree surveys—these species were noted to occur if observed. Surveys were not conducted for monarch butterfly (*Danaus plexippus* pop. 1, CFE); it has a moderate potential to occur in the BSA but a low potential to occur in the LOD due to the high level of disturbance.

Fourteen of these non-listed special-status species are fully covered under the MSHCP. These species, which do not require additional study at the species level, include arroyo chub (*Gila orcuttii*; CSC), coast range newt (*Taricha torosa torosa*; CSC), Belding's orange-throated whiptail (*Aspidoscelis hyperythrus beldingi;* CSC), red-diamond rattlesnake (*Crotalus ruber*; CSC), San Diego coast horned lizard (*Phrynosoma coronatum blainvillii*; CSC), white-tailed kite (*Elanus leucurus*; California Fully Protected [CFP]), northern harrier (*Circus hudsonius*; CSC), golden eagle (*Aquila chrysaetos*; Bald and Golden Eagle Protection Act [BGEPA], CFP), loggerhead shrike (*Lanius ludovicianus*; CSC), coastal cactus wren (*Campylorhynchus brunneicapillus sandiegensis*; CSC), yellow warbler (*Setophaga petechia;* CSC), yellow-breasted chat (*Icteria virens;* CSC), Los Angeles pocket mouse (*Perognathus longimembris brevinasus*; CSC), and San Diego desert woodrat (*Neotoma lepida intermedia*; CSC) (CDFW 2024). San Diego black-tailed jackrabbit (*Lepus californicus bennettii*), American peregrine falcon (*Falco peregrinus anatum*), and northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*) are covered under the MSHCP but are no longer CSC or CFP (CDFW 2024). Although these species are covered under the MSHCP, the birds and their active nests are protected under the Migratory Bird Treaty Act, BGEPA, and California Fish and Game Code.

Three non-listed special-status animal species were detected in the BSA during field studies: Belding's orange-throated whiptail, yellow-breasted chat, and yellow warbler. All three of these non-listed special-status animals are MSHCP fully covered species, with no additional survey requirements. Although there is suitable habitat in the BSA for the remaining 15 species, they were not detected during all field surveys.

The BSA contains 1,295.63 acres of suitable habitat for these non-listed MSHCP covered animal species in the form of grasslands, shrublands, forests and woodlands, riparian habitats, and agricultural areas. Potential suitability of the habitats ranges from low quality to high quality, with areas within and directly adjacent to the LOD providing low quality and areas farther from the LOD providing higher quality.

The grasshopper sparrow is a CSC. Under the MSHCP, there are species-specific conservation objectives that need to be met before this is a fully covered species. These conservation objectives have not yet been met for the MSHCP. Therefore, this species is essentially treated in this report as not covered by the MSHCP. The BSA contains 387.67 acres of suitable habitat for grasshopper sparrow. It was not detected during any of the field studies for the Project, but there is a moderate likelihood that it is present.

There is a remainder of 15 non-listed special-status species that are not covered under the MSHCP, including six bat species: pallid bat (*Antrozous pallidus*; CSC), western mastiff bat (*Eumops perotis*; CSC), pocketed free-tailed bat (*Nyctinomops femorosaccus*; CSC), big free-tailed bat (*N. macrotis*; CSC), western red bat (*Lasiurus blossevillii*; CSC), and western yellow bat (*L. xanthinus*; CSC). The other nine species are Southern California legless lizard (*Anniella stebbinsi*; CSC), California glossy snake (*Arizona elegans occidentalis*; CSC), coastal whiptail (*Aspidoscelis tigris stejnegeri*; CSC), Coronado skink (*Eumeces skiltonianus interparietalis*; CSC), coast patch-nosed snake (*Salvadora hexalepis virgultea*; CSC), long-eared owl (*Asio otus*; CSC), Dulzura pocket mouse (*Chaetodipus californicus femoralis*; CSC), monarch butterfly (*Danaus plexippus* pop. 1, CFE), and American badger (*Taxidea taxus*; CSC). Suitable habitat is present throughout the BSA within native vegetation communities and open areas for most of the above-mentioned species. The BSA does not overlap with any known mapped overwintering groves for monarch butterfly, and no milkweed (*Asclepias* spp.), a required host plant for monarch caterpillars, was noted in the BSA. Focused surveys were performed for special-status bat species, and none were observed. Although there is suitable habitat in the BSA for the other species, none were detected during surveys; however, species-specific focused surveys were not performed, as these species were surveyed for incidentally during all other biological surveys.

The following Avoidance and Minimization Measures shall be implemented to ensure indirect impacts on non-listed special-status wildlife species, both those covered and not covered by the MSHCP, are avoided and/or minimized.

NC-2 (NES BIO-2)
NC-3 (NES BIO-3)
NC-4 (NES BIO-4)
NC-5 (NES BIO-5)
NC-6 (NES BIO-6)

NC-18 (NES BIO-20)
NC-19 (NES BIO-24)
AS-1 (NES BIO-18)

The following Avoidance and Minimization Measures shall be implemented to ensure direct impacts on non-MSHCP covered special-status wildlife species are avoided and/or minimized:

NC-1 (NES BIO-1)
NC-10 (NES BIO-10)
NC-12 (NES BIO-12)
NC-13 (NES BIO-13)
NC-18 (NES BIO-20)
TE-2 (NES BIO-21)
AS-5 (NES BIO-28)

In addition to the above measures for non-MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measures would reduce or minimize potential impacts on bats:

AS-3 (NES BIO-26)
AS-4 (NES BIO-27)

In addition to the above measures for non-MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measures would reduce or minimize potential impacts on monarch butterfly:

NC-2 (NES BIO-2)
NC-3 (NES BIO-3)
NC-4 (NES BIO-4)
NC-5 (NES BIO-5)
NC-6 (NES BIO-6)
NC-7 (NES BIO-7)
NC-8 (NES BIO-8)
NC-9 (NES BIO-9)
NC-11 (NES BIO-11)
TE-1 (NES BIO-29)

For MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measures shall be implemented:

NC-1 (NES BIO-1)
NC-10 (NES BIO-10)
NC-12 (NES BIO-12)
NC-13 (NES BIO-13)
NC-14 (NES BIO-14)
NC-18 (NES BIO-20)
TE-2 (NES BIO-21)
AS-5 (NES BIO-28)

In addition to the above measures for direct impacts on MSHCP covered special-status wildlife species, the following Avoidance and Minimization Measure would be required for burrowing owls:

AS-2 (BIO-25)

Non-listed Special-status MSHCP Covered Plant Species

During the rare plant focused surveys performed in 2020 and 2021, none of the Criteria Area Plant Species Survey Area 1 Species and NEPS Area 1 and 7 non-listed special-status plant species were observed. Therefore, no impacts would occur. Long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*), was found; however, this species is fully covered under the MSHCP. Long-spined spineflower is not a Criteria Area Plant Species or a NEPS. It is a fully covered species under the MSHCP, with no additional survey requirements. No other covered plant species were detected; however, these could potentially occur in the Project vicinity. No Avoidance and Minimization Measures and no mitigation would be required for non-listed special-status plant species.

Non-listed Special-status Non-MSHCP Covered Plant Species

During the rare plant focused surveys performed in 2020 and 2021, no non-MSHCP non-listed special-status plants species were observed during the 2020 or 2021 focused studies. These species are considered absent from the study area; therefore, no Avoidance and Minimization Measures are necessary.

The Project would implement Avoidance and Minimization Measures and would be in compliance with the MSHCP to avoid impacts on candidate, sensitive, or special-status wildlife and plant species.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less than Significant with Mitigation Incorporated

MSHCP riparian/riverine resources are present within the Project's study area and are proposed for removal. The Project is expected to result in impacts on 7.12 acres of riparian/riverine resources, with 2.26 acres of this being riparian vegetated acreage and the remaining 4.86 acres being riverine.

Impacts on MSHCP riparian/riverine resources from the Project would require compensatory mitigation to reduce impacts to less-than-significant levels under CEQA. Under the MSHCP, compensation for these losses shall be addressed through the following Mitigation Measures:

NC-15 (NES BIO-15])
NC-16 (NES BIO-16)

NC-17 (NES BIO-17)
JPR-2

Twenty-five vegetation communities and three land use types were identified in the BSA, and 11 of the vegetation communities are classified as sensitive natural communities by the California Department of Fish and Wildlife (CDFW) (CDFW 2024). Of these 11 communities, impacts are expected to occur on seven of the communities, as shown in Table 3-2.

Table 3-2. Vegetation Communities

Vegetation Community	Impact (acre)		
	Permanent	Temporary	Shading
Clustered tarweed fields	0.09	2.29	0.00
Bush penstemon scrub	0.00	0.96	0.00
Holly leaf cherry—toyon—greenbark chaparral	0.00	0.53	0.00

NC-7 (NES BIO-7)
NC-8 (NES BIO-8)
NC-9 (NES BIO-9)
NC-10 (NES BIO-10)
NC-11 (NES BIO-11)
NC-12 (NES BIO-12)
JPR-1

Impacts on sensitive natural communities from the Project would require compensatory mitigation. Under the MSHCP, compensation for these losses would also be addressed through consistency with the MSHCP. The execution of the MSHCP includes the requirement of creating an interconnected MSHCP Conservation Area in the MSHCP

Plan Area. The Conservation Area would conserve habitats and associated plant and animal species.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less than Significant with Mitigation Incorporated

The Project would result in the permanent removal of 0.01 acre of federal jurisdictional non-wetlands, as well as the temporary disturbance of 2.51 acres of federal jurisdictional non-wetlands and 0.03 acre of federal jurisdictional wetlands. It would also result in 0.20 acre of temporary impacts on non-wetland Regional Water Quality Control Board (RWQCB) jurisdictional waters of the State, the permanent removal of 0.07 acre of State streambeds, the temporary disturbance of 3.82 acres of State streambeds, and shading impacts on 1.00 acre. A total of 2.26 acres of CDFW riparian would be affected by the Project (<0.01 acre permanent, 1.80 acres temporary, and 0.46 acre shading effects).

Authorization under Section 404 of the Clean Water Act (CWA) Nationwide Permit and Water Quality Certification under Section 401 of the CWA (and a Porter-Cologne Water Quality Control Act permit for impacts on State waters only) would be required, as would a CDFW 1602 Streambed Alteration Agreement.

The following Avoidance and Minimization Measures shall be implemented to ensure indirect construction impacts on State and federal wetlands are avoided and/or minimized.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less-than-Significant Impact

Development of the median into active traffic lanes may reduce the chance of an animal successfully reaching the other side when crossing the highway, although the number of animals this may directly affect is not known. However, the capacity for wildlife movement across I-15 is already poor, with roadkill observed frequently. Such capacity has also been degraded over past decades by the increasing width of the interstate, traffic flows, and noise. Although the Project would not improve this situation, it is not expected to substantially worsen current operational impacts on wildlife movement or connectivity.

Overall, the Project is not expected to substantially affect wildlife movement or linkage functions and values within the BSA because major wash crossings under I-15 bridges within the limits of the Project would be retained, including the priority linkages at Bedford Wash and Indian Wash.

This Project is not expected to affect any migratory wildlife corridors or the movement of any native resident or migratory fish or wildlife species. This Project would not impede the use of native wildlife nursery sites.

To address potential edge impacts during construction and direct impacts from additional bridge infrastructure and closing of bridge gaps on MSHCP Proposed Linkage 1, Proposed Constrained Linkage 3, Proposed Constrained Linkage 5, Proposed Core 1, and Proposed Extension of Existing Core 2, the following Avoidance and Minimization Measures shall be implemented. This would ensure direct construction impacts on wildlife movement corridors are avoided and/or minimized.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less than Significant with Mitigation Incorporated

Within the BSA, trees are protected by the Riverside County Oak Tree Management Guidelines, Open Space and Conservation Policy, Ordinance 12.08, Tree Removal Ordinance 12.24.010, and the California State Senate Concurrent Resolution No. 17, Oak Woodlands.

Protected trees in the BSA include oak trees within both mapped Coast Live Oak Woodland and Forest and any other vegetation community containing oak trees. Other protected trees include trees within the right of way of the county highway.

With implementation of the Mitigation Measure below, all potential direct and indirect impacts on protected trees would be reduced to less-than-significant levels:

NC-20 (NES BIO-19)

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less than Significant with Mitigation Incorporated

The Project is within the boundaries of the MSHCP and is identified in the MSHCP as a Planned Road and a Covered Activity. Portions of the Project lie both inside and outside of MSHCP Criteria Area cells. Coverage under the MSHCP provides an expedited process for biological resource permitting and approvals, as well as compensatory mitigation under CEQA. For those MSHCP covered resources, no additional mitigation, or requirements beyond those necessitated by the MSHCP, are required for the Project.

MSHCP cores are located within the study area:

- Proposed Existing Core C (Lake Mathews/Estelle Mountain)
- Proposed Extension of Existing Core 2
- Proposed Core 1
- Proposed Linkage 1

- Proposed Linkage 2
- Proposed Constrained Linkage 3
- Proposed Constrained Linkage 5
- Proposed Constrained Linkage 6

The Project would not appreciably affect the ability of the cores and linkages to function as needed for the MSHCP due to the Project design.

In addition, the Project is consistent with Section 6.1.2 of the MSHCP, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools, and Section 6.3.2 of the MSHCP, Additional Surveys Required.

The Project is a Covered Activity and occurs within the Temescal Canyon and Elsinore Area Plans (refer to Chapter 2 for a summary of the MSHCP as it relates to the Project).

In compliance with the MSHCP, focused surveys were performed for Riverside fairy shrimp, vernal pool fairy shrimp, SWFL, and LBV to comply with MSHCP Section 6.1.2, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools. In addition, focused surveys were performed for burrowing owl, Narrow Endemic plants, and Criteria Area plants to comply with MSHCP Section 6.3.2, Additional Surveys Required. In summary, the Project would potentially affect natural vegetation communities (i.e., nonnative grassland, coastal sage scrub, and riparian habitats), listed animals (i.e., Quino checkerspot butterfly, arroyo toad, coastal California gnatcatcher, SKR, SBKR, LBV, and mountain lion), and non-listed special-status plants and animals.

Under the MSHCP, a project needs to address potential indirect effects associated with locating development near MSHCP conservation areas through potential degradation of water quality by drainages, the introduction of toxins, night lighting, noise, and invasive species (Volume I, Section 6.1.4, Guidelines Pertaining to the Urban/Wildlands Interface). The necessary Avoidance and Minimization Measures for consistency with the MSHCP are included as a part of the Project.

The permittees (Caltrans and RCTC) have reviewed the Project and determined that the Project has met all of the requirements of the MSHCP (i.e., is consistent with the MSHCP). Because the Project is within MSHCP Criteria Cells, the permittees are required to submit a Joint Project Review (JPR) application with supporting documentation to the Regional Conservation Authority (RCA) for review. The Project analysis would include an MSHCP Consistency Analysis to be reviewed by the U.S. Fish and Wildlife Service and CDFW (the Wildlife Agencies), to be included as an appendix to the CEQA document. The JPR includes all required conditions of approval needed to ensure that the Project is consistent with the MSHCP. This includes items such as the Determination of Biologically Equivalent or Superior Preservation (DBESP) related to mitigation for impacts on riparian/riverine resources and preconstruction surveys for burrowing owls and nesting birds, among others. Consistency with the

MSHCP includes consistency with all MSHCP reserve assembly goals and all of the MSHCP plan requirements. This includes an analysis regarding whether the Project conflicts with reserve assembly goals for cores, linkages, and constrained linkages, among others, required for assembly of the MSHCP. The analysis must include an evaluation of not only the reserve assembly goals, but other MSHCP requirements, including Section 6.1.2, Riparian/Riverine and Vernal Pool Policies; Section 6.1.3, Narrow Endemic Plant Species Survey Requirements; Section 6.3.2, Criteria Area Species Survey Requirements; Section 7.5, Siting, Design and Construction and Wildlife Movement Guidelines (required if in Criteria Cells or public/quasi-public lands); and Section 6.1.4, Urban Wildlife Interface Guidelines. Sections 6.1.2, 6.1.3, 6.3.2, and 6.1.4 also apply to projects outside of MSHCP Criteria Areas.

The RCA reviews the JPR and supporting documentation, including the DBESP (if applicable), and issues Consistency Findings to the permittee and the Wildlife Agencies. The Wildlife Agencies then review the Consistency Findings and supporting documentation and either provide comments to be addressed prior to concurrence or concur with the findings of consistency with the MSHCP. The MSHCP Consistency Findings (that the Project is consistent with the MSHCP and the JPR process is completed) are included in the final environmental document. A JPR is completed, including the submission of a DBESP, and a consistency letter has been included in the final environmental document.

The following Avoidance and Minimizations Measures would ensure indirect impacts on the MSHCP are avoided and/or minimized:

NC-3 (NES BIO-3)
NC-5 (NES BIO-5)
NC-6 (NES BIO-6)
NC-7 (NES BIO-7)
NC-8 (NES BIO-8)
NC-9 (NES BIO-9)
NC-10 (NES BIO-10)
NC-12 (NES BIO-12)
NC-13 (NES BIO-13)
NC-14 (NES BIO-14)
JPR-1

The following Mitigation Measures are required to reduce impacts to less-than-significant levels under CEQA and meet the requirements of the MSHCP:

NC-15 (NES BIO-15)
NC-16 (NES BIO-16)
NC-17 (NES BIO-17)

The Project is within the boundaries of the long-term SKR HCP. In 1996, a Section 10(a) Permit and California Fish and Game Code 2081 Management Authorization were issued to the Riverside County Habitat Conservation Agency for the SKR HCP. The

SKR HCP provides take authorization for SKR within the SKR HCP boundaries, and the MSHCP provides take authorization for SKR outside the boundaries of the SKR HCP, but within the MSHCP boundaries. The core reserves within the SKR HCP are managed as a part of the MSHCP consistent with the SKR HCP. Upon expiration of the initial 30-year term of the SKR HCP (2026), the RCA will process an amendment to the MSHCP to allow coverage for SKR throughout the MSHCP area. Under the SKR HCP, take authorization is streamlined, as projects do not require individual review and approval by the Wildlife Agencies. Individual projects within the SKR Plan Area are required to pay a SKR mitigation fee for land that is developed and removes SKR habitat. The fee is $500 per gross acre proposed for development.

The following Avoidance and Minimization Measures would ensure indirect impacts on the SKR HCP are avoided and/or minimized:

NC-3 (NES BIO-3)

NC-6 (NES BIO-6)
NC-7 (NES BIO-7)
NC-8 (NES BIO-8)
NC-9 (NES BIO-9)
NC-10 (NES BIO-10)
NC-12 (NES BIO-12)
NC-13 (NES BIO-13)
TE-4 Stephens' Kangaroo Rat

3.1.5 Cultural Resources

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☒	☐
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	☐	☐	☒	☐

3.1.5.1 CEQA Significance Determinations for Cultural Resources

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts on cultural resources was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Historic Property Survey Report (HPSR)* (Caltrans 2023c), *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Archaeological Survey Report (ASR)* (Caltrans 2023d), *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Historical Resources Evaluation Report (HRER)* (Caltrans 2023e), and *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Finding of No Adverse Effect (FOE)* (Caltrans 2023f) and Section 2.2.10, *Cultural Resources*, in this EIR/EA. The following discussions are based on those analyses.

a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less-than-Significant Impact

Properties listed in, or officially determined eligible for listing in, the National Register of Historic Places (NRHP) are automatically listed in the California Register of Historical Resources (CRHR). Therefore, for the purposes of this analysis, all NRHP assumed eligible properties are also resources under CEQA. As detailed in Section 2.2.10, *Cultural Resources*, the following archaeological sites within the Area of Potential Effects (APE) are considered eligible for inclusion in the NRHP for the purposes of this Project only because they would be protected in their entirety from any potential effects through the establishment of an Environmentally Sensitive Area (ESA), in accordance

with Section 106 Programmatic Agreement (PA) Stipulation VIII.C.4. Therefore, there are seven historic properties within or adjacent to the APE for the purposes of this Project.

Table 3-3. Historic Properties within or Adjacent to the APE

Name*	Community	OHP Status Code
Túu'uv TCP (TCP-1)	Corona, Perris, Riverside, CA	3S (for the purposes of this Project only)
Qaxáalku Payómik TCP (TCP-2)	Corona, Perris, Riverside, CA	3S (for the purposes of this Project only)
Qaxáalku Kwíimik TCP (TCP-3)	Corona, Perris, Riverside, CA	3S (for the purposes of this Project only)
P-33-000108/CA-LAN-108	Temescal Valley, CA	3S (for the purposes of this Project only)
P-33-000630/CA-RIV-630	Temescal Valley, CA	3S (for the purposes of this Project only)
P-33-001099/CA-RIV-1099	Temescal Valley, CA	3S (for the purposes of this Project only)
P-33-002992/CA-RIV-2992	Temescal Valley, CA	3S (for the purposes of this Project only)

* Not a State-owned resource.
3S: Appears eligible for NRHP individually through survey evaluation
OHP = Office of Historic Preservation; TCP = Traditional Cultural Property

Four of the seven of the historic properties are prehistoric archaeological sites that would be avoided and protected by using an ESA for each. Therefore, the Project has a No Adverse Effect with Standard Conditions finding for the four prehistoric historic properties. The other three resources are the Traditional Cultural Properties (TCPs). Based on the limited percentage of permanent impacts on the overall TCPs and the lack of impacts on potentially contributing archaeological sites, a Finding of No Adverse Effect on the TCPs is applicable (see Section 2.2.10, *Cultural Resources*).

Overall, the undertaking, as currently proposed, would have a finding of No Adverse Effect on the four archaeological sites or three TCPs. Caltrans District 8, in applying the Criteria of Adverse Effect, proposes that a Finding of No Adverse Effect is appropriate and the State Historic Preservation Officer's (SHPO's) supplied concurrence in the finding, pursuant to 36 Code of Federal Regulations (CFR) 800.5(c) and 106 PA Stipulation X.B.2 on May 26, 2023.

Although a low potential has been determined, in general, previously undocumented cultural materials or human remains could be unearthed during site preparation, grading, or excavation for the Build Alternative (Preferred Alternative). Those potential effects would be avoided or minimized through Standard Project Measures **CR-1** through **CR-4** (see Section 2.2.10, *Cultural Resources*, for full measure text). Based on this analysis, less-than-significant impacts are anticipated related to cultural resources.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Less-than-Significant Impact

No human remains are known to exist within the APE. Therefore, construction of the Build Alternative (Preferred Alternative) would not result in impacts on known human remains. If human remains are exposed during construction, Standard Project Measure **CR-2** (as identified in Section 2.2.10, *Cultural Resources*) requires compliance with State Health and Safety Code Section 7050.5, which states that further disturbances and activities shall cease in any area or nearby area suspected to overlie remains and that the Riverside County Coroner shall be contacted. Pursuant to California Public Resources Code Section 5097.98, if the remains are thought to be Native American, the coroner will notify the Native American Heritage Commission, which will then notify the Most Likely Descendant. At the same time, the Caltrans District 8 Environmental Branch Chief or the District 8 Native American Coordinator will be contacted so they may work with the Most Likely Descendant on the respectful treatment and disposition of the remains. Further provisions of California Public Resources Code Section 5097.98 are to be followed as applicable along with Standard Project Measure **CR-2**. The impact related to the disturbance of human remains would be less than significant.

3.1.6 Energy

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

3.1.6.1 CEQA Significance Determinations for Energy

a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

b) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less-than-Significant Impact

Energy consumption from construction activities would occur at different rates throughout the construction phases. Project construction is expected to use equipment such as crawler tractors, excavators, graders, rollers, rubber-tired loaders, scrapers, rough-terrain forklifts, and paving equipment. As described in Section 2.3.8, *Energy*, the direct energy required to build the Project would be approximately 66.6 billion British thermal units over the course of the approximately 3-year construction period. Although construction would result in a short-term increase in energy use, construction design features would help conserve energy. For example, recycled materials, including removed asphalt concrete pavement and cement concrete pavement, would be used where feasible, consistent with Standard Project Measure **EN-1**. Recycled products typically have lower energy costs for manufacturing and transportation because recycled products do not require raw materials, which must be mined and transported to a processing facility. If new materials must be used, a fly ash mix may be considered to lower the heat island effect, depending on what is allowable under Caltrans specifications. The energy conservation features would be consistent with State and

local policies to reduce energy consumption. Therefore, construction of the Project would not result in the inefficient, wasteful, or unnecessary consumption of energy.

Operation of traffic lights, streetlights, sensors, and changeable message signs such as toll pricing signs consumes electricity. These features are required to manage traffic and provide safe driving conditions. Light-emitting diode (LED) fixtures would be used wherever traffic lights or streetlights are installed or replaced (Avoidance and Minimization Measure **EN-2**).

Long-term changes in energy use are due to the changes in volumes, speeds, and fuel economy of vehicles traveling in the region. As described in Section 2.3.8, *Energy*, there would be an increase in traffic volumes under the Build Alternative (Preferred Alternative) as compared to the No-Build Alternative, resulting in increased energy consumption.

Over the long term, when compared to the Existing Conditions (2019), the Build Alternative (Preferred Alternative) is projected to increase the annual energy consumption by 17.8 percent in 2030 and by 5.7 percent in 2050. When compared to the Existing Conditions (2019), annual increase in traffic volumes is projected to increase by 62.0 percent in 2030 and by 67.4 percent by 2050. This disparity is attributed to fleet turnover, as older, less fuel-efficient vehicles are replaced by later-model, more fuel-efficient vehicles over time. These later-model replacement vehicles would also include hybrid and all-electric vehicles. This increase is not significant in the context of statewide consumption, as it would represent approximately 0.001 percent of statewide energy consumption. As such, Project operation would not result in a wasteful, inefficient, or unnecessary consumption of energy.

The Project improvements would require increased levels of periodic maintenance, which could increase indirect energy consumption. Indirect energy consumption would be from the energy needs of vehicles and equipment used for routine maintenance, such as vegetation management, sweeping, restriping, and pavement preservation activities.

The total indirect energy impacts would not be substantial at the regional level, and the total Project impact on regional energy supplies is expected to be minor. As such, the Project would not conflict with or obstruct a State or local renewable energy or energy efficiency plan, and impacts would be less than significant.

3.1.7 Geology and Soils

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

3.1.7.1 CEQA Significance Determinations for Geology and Soils

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts on geology and soils was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) District Preliminary Geotechnical Report* (Caltrans 2023g) and in Section 2.3.3, *Geology/Soils/Seismic/Topography*, in this EIR/EA. The following discussions are based on those analyses.

a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

No Impact

The Project area is not in a State of California Special Studies (“Alquist-Priolo”) Zone for fault rupture, and no known active faults are mapped as crossing or projecting toward the site. The nearest active faults are the Elsinore fault (closest distance to Project is approximately 3 miles) and San Jacinto fault (closest distance to Project is approximately 30 miles). The Project is situated in a seismically active region. As is the case for most areas of Southern California, ground shaking resulting from earthquakes associated with nearby and more distant faults may occur at the Project site. During the life of the Project, seismic activity associated with active faults can be expected to generate moderate to strong ground shaking at the site. Compliance with the most current Caltrans procedures regarding seismic design, which is standard practice on all Caltrans projects, is anticipated to prevent any adverse effects related to seismic ground shaking. Seismic design would also meet County of Riverside requirements for near-source design parameters under the Uniform Building Code. Therefore, potential

for fault rupture is considered remote for both Project construction and operation and no impact is anticipated.

ii) Strong seismic ground shaking?

iii) Seismic-related ground failure, including liquefaction?

iv) Landslides?

Less-than-Significant Impact

The Project is within a seismically active region subject to future moderate to strong seismic ground shaking from earthquakes occurring along regional and local faults. Direct and indirect impacts related to strong seismic shaking may include ground deformation, which includes fissures, settlement, displacement, and loss of bearing strength. Therefore, the Project may be subject to strong seismic ground shaking during both construction and operation.

Neither ground shaking nor fault rupture can be avoided in the design of roadways; however, placing the realigned roadway either at natural grade or in low cuts or on low embankments limits the potential for, and consequences of, failure in the cuts and fills. Accordingly, the currently proposed designs are generally favorable for accommodating future ground shaking or surface rupture. Compliance with Caltrans' procedures regarding seismic design, as detailed in Section 19, "Earthwork," of the Caltrans Standard Specifications Manual, is required for any project undertaken by Caltrans to minimize the potential for adverse effects related to seismic ground shaking. Seismic design also must meet County of Riverside requirements for near-source design parameters under the Uniform Building Code. Construction and operation of the Project would not cause strong seismic ground shaking, cause fault rupture, or result in seismic-related ground failure.

Liquefaction is a phenomenon whereby saturated granular soils lose their inherent shear strength due to increased pore water pressures, which may be induced by conditions such as an earthquake. According to the California Geological Survey California Seismic Hazards Program, the Project is not within a liquefaction zone.[2] The Project would not include features that would lead to impacts related to liquefaction.

There is a low risk level for landslides within the Project limits. Construction would be within the relatively flat I-15 median between existing northbound and southbound lanes. No new cut slopes are proposed, and research did not reveal any existing landslides along the Project alignment. In addition, the Project will include Standard Project Measure **GEO-1** to properly assess and minimize potential impacts on geotechnical sites as part of the Build Alternative (Preferred Alternative). Impacts are considered less than significant.

[2] https://www.conservation.ca.gov/cgs/hazards/seismic-hazards-mapping-act

b) Result in substantial soil erosion or the loss of topsoil?

Less-than-Significant Impact

Construction activities would require the temporary disturbance of soil within the Project limits, including excavation, grading, and other typical construction-related activities that could increase the potential of soil erosion during construction. The construction contractor would be required to adhere to requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit, which would include implementing erosion and sediment control BMPs specifically identified in the Project-specific Stormwater Pollution Prevention Plan (SWPPP) to prevent sediment from moving into receiving waters and affecting water quality. Additionally, Standard Project Measure **WQ-2** (Section 2.3.2, *Water Quality and Stormwater Runoff*) and Avoidance and Minimization Measure **NC-12** (Section 2.4.1, *Natural Communities*) would implement erosion control measures during construction. Therefore, impacts related to soil erosion or loss of topsoil would be less than significant during Project construction.

During operation, the Project would not result in substantial soil erosion or loss of topsoil beyond what the Project area already experiences as an existing roadway. Therefore, there would be no impact during Project operation.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less-than-Significant Impact

Available site information and the site review performed in support of the Preliminary Geotechnical Design Report indicated low potential for landslides within the Project limits. However, erosion protection would be implemented in design of the Project, in accordance with Caltrans standards and special provisions, which is required for all Caltrans projects. No impacts are anticipated related to landslides, as the risk for landslides is low.

As previously discussed, according to the California Geological Survey California Seismic Hazards Program, the Project is not within an area that is subject to liquefaction. Furthermore, the lack of shallow groundwater along much of the Project limits further supports the low potential for liquefaction along the Project alignment; therefore, the potential for lateral spreading or liquefaction to affect the Project is low.

There is the potential for subsidence to occur, potentially leading to collapse, depending on the methods and type of equipment used during the construction period and the design that is implemented for the Project. The potential impact and hazards of consolidation settlement due to embankment loading and subsidence will be determined in the Plans, Specifications, and Estimates phase, which will include Standard Project Measure **GEO-1** to properly assess and minimize potential impacts on geotechnical sites. The Project would follow Caltrans' latest design requirements to minimize any

potential effects related to subsidence and settlement, as required for all Caltrans projects. Impacts would be less than significant.

d) Be located on expansive soil, creating substantial direct or indirect risks to life or property?

Less-than-Significant Impact

Expansive soils generally result from specific clay minerals that have the capacity to undergo substantial volume change (shrink or swell) based on changes in moisture content. As such, sandy soils are not generally classified as expansive soils. Much of the Project footprint consists of soils that are primarily silty sands with coarser young alluvium within the various washes. Clay is likely to be encountered in the Alberhill area in northern Lake Elsinore. Pavement design would be based on CTM 301 R-value test results, taking into account clay content of pavement subgrades. Clays would not be used for earth-retaining wall backfill. The impact from construction and operation of the Project would be less than significant.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact

The Project would not include septic tanks, sewer, or alternative wastewater disposal systems, or other facilities where such facilities would be required. There would be no impact.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less-than-Significant Impact with Mitigation Incorporated

The results of the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Paleontological Identification Report/Paleontological Evaluation Report* (Caltrans 2022b) indicate that the Project area is underlain, in part, by high paleontologically sensitive geologic units, which are known to contain scientifically important paleontological resources. These units consist of the following.

- Late to middle Pleistocene-age old alluvial fan deposits (Qof)
- Late to middle Pleistocene-age old axial channel deposits (Qoa)
- Late to middle Pleistocene-age old paralic deposits, undivided (Qop)
- Middle to early Pleistocene-age very old alluvial fan deposits (Qvof)
- Middle to early Pleistocene-age very old axial channel deposits (Qvoa)

- Paleocene-age Silverado Formation (Tsi)

In addition, although high-sensitivity early Miocene- to Oligocene-age Vaqueros and Sespe Formations, undivided (Tvs), were not observed directly along the survey corridor, these sediments were observed in nearby hill exposures immediately adjacent to the survey area.

Due to the potential for Project construction to affect these units and any resources harbored within, a paleontological mitigation plan shall be prepared by a qualified paleontologist during final design and implemented during ground-disturbing activities in order to lessen potential impacts on significant paleontological resources (Mitigation Measure **PAL-1**). With implementation of Mitigation Measure **PAL-1,** impacts would be less than significant for paleontological resources.

3.1.8 Greenhouse Gas Emissions

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

3.1.8.1 CEQA Significance Determinations for Greenhouse Gas Emissions

The potential for the Build Alternative (Preferred Alternative) to adversely affect greenhouse gas (GHG) emissions was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Air Quality Report* (Caltrans 2022a) and in Section 3.3, *Climate Change*, of this EIR/EA.

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Significant and Unavoidable Impact

Construction Emissions

Construction GHG emissions would be expected to result from material processing, onsite construction equipment, and traffic delays due to construction. These emissions would be produced at different levels throughout the construction phase. Project construction would be expected to involve crawler tractors, excavators, graders, rollers, rubber-tired loaders, scrapers, rough-terrain forklifts, and paving equipment, among other types of construction equipment. Projected GHG construction emissions were calculated for the Project using the Sacramento Metropolitan Air Quality Management District Roadway Construction Emissions Model (RCEM)[3] and estimated to total approximately 5,444 metric tons of carbon dioxide equivalent (CO_2e) over the course of the approximately 3-year construction period. Mitigation Measures **GHG-1** through **GHG-4, GHG-11**, and **AQ-5,** as well as Standard Project Measure **EN-1** and Standard

[3] The Sacramento Metropolitan Air Quality Management District RCEM is recommended by Caltrans for the quantification of expected construction-related GHG emissions related to the Project.

Project Measure **AQ-4**, are expected to reduce construction GHG emissions impacts from the Project.

Operations Emissions

The regional vehicular travel data for the baseline/existing, No-Build, and Build Alternative (Preferred Alternative) conditions, along with the CT-EMFAC2021 emission rates, were used to calculate the expected CO_{2e} emissions for the Existing (2019), Opening Year (2030), and Horizon Year (2050) conditions. The results of the modeling are summarized in Section 3.3, *Climate Change*. As shown in Table 3-5, when compared to the Existing (2019) baseline, in both the Opening Year (2030) and Design Year (2050), the No-Build and Build Alternatives (Preferred Alternative) would result in an increase in GHG emissions. When compared to the No-Build condition, the Build Alternative (Preferred Alternative) would result in an increase in emissions in both the Opening Year (2030) and Design Year (2050). Mitigation Measures **GHG-5** through **GHG-10** would reduce the GHG emissions impacts from operation and maintenance of the Project. In addition, Mitigation Measures **AQ-6** through **AQ-8** would reduce vehicle use and its associated environmental impacts. However, because operational GHG emissions under the Build Alternative (Preferred Alternative) would increase in the Design Year (2050) compared to existing conditions, the impact would be significant and unavoidable under CEQA.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Significant and Unavoidable Impact

The Project is identified in SCAG's 2024–2050 RTP/SCS under project number 3160001-RIV170901. The Build Alternative (Preferred Alternative) directly supports the 2024–2050 RTP/SCS mobility and accessibility performance outcome by reducing vehicle delay and increasing throughput (traffic flow). Reducing vehicle delay and increasing throughput (traffic flow) is expected to help minimize idling GHG emissions, as well as lower the time traffic spends at a lower vehicle speed where GHG emissions are higher. Therefore, this strategy contributes to overall GHG reduction efforts regarding mobile sources within the SCAG region. However, as discussed in Section 3.3, *Climate Change*, because operational emissions are projected to increase under the Build Alternative (Preferred Alternative) in the Opening Year (2030) and Design Year (2050) when compared to the Existing (2019) condition and No-Build condition in the Opening and Design years, the Project would conflict with the goals included in the State's Assembly Bill (AB) 32 Climate Change Scoping Plan and other regulations adopted for the purpose of reducing the emissions of GHGs. Although Mitigation Measures **GHG-1** through **GHG-11,** Mitigation Measures **AQ-5** through **AQ-8**, Standard Project Measure **EN-1,** and Standard Project Measure **AQ-4** (see full measure text in Sections 3.3.4.3 and 3.3.5.5) would be implemented to reduce Project GHG emissions, impacts would be considered significant and unavoidable.

3.1.9 Hazards and Hazardous Materials

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☒	☐

3.1.9.1 CEQA Significance Determinations for Hazards and Hazardous Materials

The potential for the Build Alternative (Preferred Alternative) to adversely affect hazards and hazardous materials was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Initial Site Assessment* (Caltrans 2021a), *I-15 ELPSE ISA Update Memorandum* (Caltrans 2025), and in Section 2.3.5, *Hazardous Waste/Materials*, of this EIR/EA.

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less-than-Significant Impact

Through excavation, demolition, and other construction activities, the Project has the potential to encounter aerially deposited lead (ADL), asbestos-containing materials (ACMs), lead-based paint (LBP), treated wood waste (TWW), lead chromate, and unexpected or unknown contaminants.

Typical hazardous materials anticipated to be used during construction of the Project (e.g., lubricants, such as grease and oils; petroleum fuels; cleaning solvents; paints) and hazardous wastes generated during construction would be handled in accordance with applicable local, State, and federal regulations and policies regarding the use, storage handling, disposal, and transport of these materials, which may include those of the Resource Conservation and Recovery Act, Clean Air Act, CWA, Department of Toxic Substances Control (DTSC) Environmental Health Standards for the Management of Hazardous Waste, provisions of the Riverside County Department of Environmental Health Hazardous Materials Branch, and U.S. Department of Transportation.

Routine maintenance activities during Project operation would also be required to follow applicable local, State, and federal regulations and policies with respect to the use, storage, handling, transport, and disposal of potentially hazardous waste or materials.

Therefore, impacts related to hazardous waste or materials are considered less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less-than-Significant Impact

As discussed in Section 2.3.5, *Hazardous Waste/Materials*, no recognized environmental conditions (RECs), historical REC sites, or controlled REC sites were identified within the Project limits. However, the Project does have the potential to encounter unexpected or unknown contaminants during soil disturbance activities. Prior to construction, a Health and Safety Plan, Contaminated Media Management Plan, and Construction Contingency Plan would be prepared to outline specific procedures to follow if contaminants are encountered to ensure worker health and safety during construction, as identified in Avoidance and Minimization Measures **HW-5** and **HW-7** and Standard Project Measures **HW-1**, **HW-6**, and **HW-8**.

The Project may widen up to 15 bridges. ACMs are present in the gray felt pads along the northbound and southbound sides of the Brown Canyon Wash Bridge, the Weirick Road undercrossing, and the Bedford Wash Bridge inner guardrails. In addition, LBP is present in the light gray paint on the railing on the northbound side of the Temescal Wash Bridge and in the yellow lane marking on the northbound side of the Indian Wash Bridge. However, there is a potential for additional areas on all 15 bridges to contain ACM and LBP that have not been sampled. During final design, ACM and LBP content shall be sampled for all 15 bridges in areas that are expected to be affected by the Project and have not been sampled, as detailed in Standard Project Measure **HW-1**. The Project may require the removal of treated wooden guardrail posts. Treated wood objects removed from the Project corridor would be classified as TWW. The removal of any TWW shall be conducted in accordance with Chapter 34 of the Title 22 California Code of Regulations (CCR) Section 67386.1 through 67386.12, as identified in Standard Project Measure **HW-2**.

Paint used for traffic striping and pavement marking may contain lead chromate. During construction, sampling, analysis, removal, and disposal of any traffic striping and pavement materials shall be completed in accordance with Caltrans and DTSC requirements, as identified in Standard Project Measure **HW-3**.

Potential impacts from the use of hazardous substances (e.g., lubricants, petroleum fuels, cleaning solvents, paint) and the generation of hazardous waste shall be addressed through preparation of a SWPPP, as identified in Standard Project Measure **WQ-2** (Section 2.3.2, *Water Quality and Stormwater Runoff*). In addition, all hazardous waste generated during construction shall be handled, stored, and disposed of in accordance with Caltrans Standard Specifications, Section 7-107A of the Construction Manual, as identified in Standard Project Measure **HW-4**.

As discussed in Section 2.3.5, *Hazardous Waste/Materials*, the soil within the Project limits, including the median, shoulders, and ramps, do not represent a significant environmental or health hazard pertaining to ADL contamination. According to the July 1, 2016 ADL agreement between Caltrans and DTSC, it can be classified as unregulated Type X soil, non-hazardous, and reused on site without restriction (DTSC 2016). However, per the soil reuse agreement, a Lead Compliance Plan (LCP) is required for worker safety.

In addition to lead in ADL soils, the Project has the potential to expose workers to lead in traffic striping and LBP in bridges. An LCP shall be prepared to protect workers from exposure to lead. A Certified Industrial Hygienist shall prepare the LCP in accordance with Title 8 CCR Section 1532.1, as identified in Standard Project Measure **HW-8**.

The Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Standard Project Measures **HW-1** through **HW-4**, **HW-6**, **HW-8**, and **WQ-2** and Avoidance and Minimization Measures **HW-5** and **HW-7** shall be implemented, and applicable local, State, and federal regulations for the use, storage, handling, transport, and disposal of routine hazardous waste and materials shall be followed, as discussed in threshold (a) above. Impacts are considered less than significant.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less-than-Significant Impact

There are existing schools within 0.25 mile of the Project limits, including Ortega High School, Temescal Canyon High School, Temescal Valley Elementary, El Cerrito Middle School, Bellflower Montessori Academy, CEAC College Preparatory School, Morgan Academy, Olive Branch Christian School, Keith McCarthy Academy, Valley Adult School, and Jeannette Ellis Center for Child Development. No schools are known to be planned within 0.25 mile of the Project limits. As discussed in threshold (a) above, routine hazardous materials such as paint, solvents, and fuel are expected to be used, handled, stored, disposed of, and transported during construction and operation of the Project in accordance with applicable local, State, and federal regulations. Impacts are considered less than significant.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact

The Project improvements are not on a site included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, also known as the

Hazardous Waste and Substances Sites (Cortese) List. Therefore, no impacts are anticipated.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact

The closest public airport or public use airport is the Corona Municipal Airport (1900 Aviation Drive, Corona, CA), approximately 3.75 miles northwest of the Project limits. According to the City of Corona's General Plan, the Corona Municipal Airport occupies a 100-acre site. In 1978, the Corona Municipal Airport Master Plan was prepared to provide for the orderly growth and management of the municipal airport to safeguard the general welfare of the public and the inhabitants in the vicinity of the airport. The Corona Municipal Airport Master Plan was last updated in the 1990s. Originally, the municipal airport was proposed for expansion to encompass approximately 225 acres. However, it is in a federally protected wetlands with sensitive species, lies within the Prado Flood Control Basin, and is encompassed by the 100-year flood zone. Given these limiting site considerations, the airport is precluded from expansion. Because the Corona Municipal Airport is more than 2 miles from the Project and there are no future plans to expand it that would place it closer to the Project limits, no impacts are anticipated.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact

During Project construction, temporary impacts on vehicular flow and traffic may occur. The Project is not anticipated to require any full roadway closures; however, some ramps may require temporary closures, not to exceed 10 consecutive days in duration, to complete the ramp widening improvements. A list of the temporary ramp closures is provided in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities.* To ensure that construction of the Project would not physically interfere with emergency response plans adopted by the Cities of Lake Elsinore and Corona and Riverside County, Standard Project Measure **TR-1** (Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*) would be implemented. Standard Project Measure **TR-1** requires the preparation and implementation of a transportation management plan (TMP) and shall consider construction and alternative route strategies in the event that portions of roadways within the Project limits are restricted during certain construction activities. In addition, the Project shall comply with the City of Lake Elsinore, City of Corona, and Riverside County's Emergency Operations Plan, which addresses extraordinary emergency situations. All emergency procedures shall be consistent with local, State, and federal guidelines during Project construction and operation. Impacts are considered less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Less-than-Significant Impact

According to California Department of Forestry and Fire Protection (CAL FIRE) State Responsibility Area (SRA) and Local Responsibility Areas (LRA) maps, the Project limits are within areas designated as moderate, high, and very high Fire Hazard Severity Zones (FHSZs). However, the Project is within the active I-15 transportation corridor, which predominantly consists of urban, developed, and disturbed environments. The Project would not alter the alignment of I-15 and would not run directly through areas with open space and natural vegetation.

Generally, transportation projects, particularly those on existing alignments, are considered unlikely to exacerbate wildfire risks or post-fire flooding/landslides. However, Avoidance and Minimization Measure **FIRE-1** would ensure that construction activities avoid or minimize the risk of fires. The Project shall also comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including implementation of a fire prevention plan.

The Project is an express lanes project along the existing I-15 and is in a developed area composed primarily of commercial, industrial, and residential land use areas. The Project is anticipated to be constructed primarily within the existing State right of way and would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Impacts are considered less than significant.

3.1.10 Hydrology and Water Quality

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
(i) result in substantial erosion or siltation on or off site;	☐	☐	☒	☐
(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;	☐	☐	☒	☐
(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
(iv) impede or redirect flood flows?	☐	☐	☒	☐

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☒	☐
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

3.1.10.1 CEQA Significance Determinations for Hydrology and Water Quality

The potential for the Build Alternative (Preferred Alternative) to adversely impact water quality was assessed in the *Water Quality Assessment Report for Interstate 15 Express Lanes Project Southern Extension* (Caltrans 2021b) and Section 2.3.2, *Water Quality and Stormwater Runoff*, of this EIR/EA and is summarized below.

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less-than-Significant Impact

As discussed in Section 2.3.1, *Hydrology and Floodplain*, the Project limits from south to north cross over 11 channels: Wasson Canyon Wash, Arroyo del Toro, Stovepipe Canyon Wash, Gavilan Wash, Temescal Wash, Horsethief Canyon Wash, Indian Wash, Mayhew Wash, Coldwater Wash, Brown Canyon Wash, and Bedford Wash. Temescal Wash begins at the outlet from Lake Elsinore near the Seaport Boat Launch on West Lakeshore Drive. From the outlet, Temescal Wash generally flows northwest for approximately 23 miles before it confluences with Santa Ana River Reach 3 and Prado Dam near the Cities of Norco and Corona. The Santa Ana River flows southwest from Riverside County into Orange County toward the Pacific Ocean (Caltrans 2023h).

According to the Santa Ana RWQCB Basin Plan (California Water Board 2019), there are no beneficial uses designated for Wasson Canyon Wash, Arroyo del Toro Channel, Gavilan Wash, Horsethief Canyon Wash, Indian Wash, and Brown Canyon Wash. The beneficial uses for Stovepipe Canyon Wash, Temescal Wash, Mayhew Wash, Coldwater Wash, Bedford Wash, and Santa Ana River Reach 3 (Prado Dam to Mission Boulevard in Riverside) consist of groundwater recharge (GWR); contact water recreation (REC1); non-contact water recreation (REC2); water freshwater habitat (WARM); wildlife habitat (WILD); agricultural supply (AGR); industrial service supply (IND); rare, threatened, or endangered species (RARE); limited warm freshwater habitat (LWRM); municipal and domestic supply (MUN); or spawning, reproduction, and/or

early development (SPWN). In addition, none of the 11 channel crossings associated with the Project are listed on the 2020–2022 303(d)/305(b) Integrated List as impaired waterbodies. However, Temescal Wash confluences with Santa Ana River Reach 3, which is listed as an impaired waterbody, as discussed in Section 2.3.2, *Water Quality and Stormwater Runoff*.

During construction of the Project, excavated soil would be exposed and it is expected that there would be an increased potential for soil erosion compared to existing conditions. The total Disturbed Soil Area for the Project is estimated to be 844 acres. In addition, chemicals, liquid products, petroleum products (such as paints, solvents, and fuels), concrete-related waste, sanitary waste, and trash and debris may be spilled or leaked during construction with the potential for these pollutants to be transported via storm runoff into receiving waters. Standard Project Measures **WQ-1** through **WQ-3** (as identified in Section 2.3.2, *Water Quality and Stormwater Runoff*), require the design, implementation, and maintenance of construction BMPs and monitoring of water quality in compliance with the NPDES Construction General Permit that would address the potential effects of soil erosion and pollutants on receiving waters. Water quality impacts during construction of the Project are expected to be less than significant.

Additionally, dewatering activities would be required during construction of the Project. The Project shall be required to comply with the requirements of a Waste Discharge Requirement dewatering permit and implement dewatering BMPs, as described in Avoidance and Minimization Measure **WQ-5** (Section 2.3.2, *Water Quality and Stormwater Runoff*).

If a batch plant or crushing plant is needed to construct the Project and would be located off site or within State right of way, then coverage under the Industrial NPDES permit, Order No. 2014-0057-DWQ, CAS000001, would be required to address discharges from such manufacturing facilities (Standard Project Measure **WQ-4**, as identified in Section 2.3.2, *Water Quality and Stormwater Runoff*).

The Project also has the potential to result in permanent impacts on water quality due to an increase in impervious surface areas. Upon completion of construction, the Project is expected to result in approximately 125 acres of new impervious surface, which includes replacing approximately 43 acres of impervious surface and adding approximately 82 acres of new impervious surface. An increase in impervious surface area would be expected to increase surface runoff and pollutants from being discharged to receiving waters. However, the Project would include drainage improvements and permanent BMPs such as treatment, design pollution prevention, and maintenance BMPs (Standard Project Measures **WQ-6** through **WQ-8**, as identified in Section 2.3.2, *Water Quality and Stormwater Runoff*).

Treatment BMPs use treatment mechanisms to remove pollutants that have entered stormwater runoff, such as biofiltration strips and swale, trash capturing devices, and media filters. Design pollution prevention BMPs are features that prevent runoff and controlling sources of pollutants during operation of the Project, such as preserving existing vegetation and slope/surface protection systems. Maintenance BMPs are

devices used to enhance the maintainability of treatment BMPs, such as treatment BMP markers, maintenance vehicle pullouts or access gates. Permanent BMPs (Standard Project Measures **WQ-6** through **WQ-8**), as required for all Caltrans projects, shall be implemented to avoid and/or minimize impacts on water quality from stormwater runoff during operation of the Project. Impacts are anticipated to be less than significant.

As discussed above, the Project would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality. Impacts would be less than significant.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less-than-Significant Impact

The Project is within the Elsinore Groundwater Basin and Temescal Groundwater Basin. Within these groundwater basins, the Project is within the following groundwater subbasins: Elsinore-Elsinore Valley Subbasin, Elsinore-Bedford-Coldwater Subbasin, and Upper Santa Ana Valley-Temescal Subbasin. Within the Elsinore-Elsinore Valley Subbasin, the nearest groundwater well is approximately 1.6 miles south of the Project limits, and the depth to groundwater in November 2019 was approximately 299 feet (Caltrans 2021b). Within the Elsinore-Bedford-Coldwater Subbasin, the nearest groundwater well is approximately 0.3 mile east of the Project limits, and the depth to groundwater in April 2020 was approximately 32 feet (Caltrans 2021b). Within the Upper Santa Ana Valley Subbasin, the nearest groundwater well is approximately 3.5 miles north of the start of the Project limits, and the depth to groundwater in April 2020 was approximately 196 feet (Caltrans 2021b). The depth to groundwater within the Project limits is anticipated to be 5 feet below ground surface when seasonal flows are not present (Caltrans 2021b). However, groundwater levels along the Project limits are susceptible to fluctuation due to rainfall, seasonal variation, upstream flood control management, upstream development, nearby construction, irrigation, and numerous other artificial and natural influences.

As discussed in threshold (a) above, dewatering is expected to be required during Project construction; however, any groundwater dewatering is projected to be minimal. The Project would be required to obtain a dewatering permit, comply with all waste discharge requirements set by the Santa Ana RWQCB, and implement dewatering BMPs (Avoidance and Minimization Measure **WQ-5**, as identified in Section 2.3.2, *Water Quality and Stormwater Runoff*). The Project would not use groundwater during operation, because it is a transportation project and would not cause additional growth or need for additional groundwater supply. As a result, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project would impede substantial groundwater management of a basin. Impacts are considered less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

(i) result in substantial erosion or siltation on or off site;

(ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site;

(iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

(iv) impede or redirect flood flows?

Less-than-Significant Impact

The Project is within the Federal Emergency Management Agency (FEMA)-designated 1-percent annual chance (100-year) floodplains associated with Arroyo del Toro Channel, Stovepipe Canyon Wash, Temescal Wash, Mayhew Wash, Coldwater Wash, and Bedford Wash. Based on the results of the hydraulic analyses conducted, the bridge widening at Temescal Wash, Mayhew Wash, Coldwater Wash, and Bedford Wash would result in a change in a water surface elevation of less than 1 foot at each affected crossing, which is minimal and would be contained within the channels and meet freeboard requirements. In addition, bridge improvements would be structurally similar to the existing spans and alignments and would not alter the course of the water channels. The FEMA-designated 1-percent annual chance (100-year) floodplains for Temescal Wash, Mayhew Wash, Coldwater Wash, and Bedford Wash would remain within the current respective channels with the proposed conditions, and the improvements are considered to be low risk, as discussed in Section 2.3.1, *Hydrology and Floodplain*.

The drainage structures for Arroyo del Toro Channel and Stovepipe Canyon Wash that cross underneath I-15 would not be altered by the Project. Therefore, the hydraulics of Arroyo del Toro Channel and Stovepipe Canyon Wash would remain the same. No hydraulic analyses were conducted for Arroyo del Toro Channel and Stovepipe Canyon Wash, and no floodplain impacts associated with these two channels would occur.

As discussed in threshold (a), the Project shall be required to comply with the NPDES Construction General Permit and develop a SWPPP to address potential sources of pollution, which may affect water quality including sediment erosion and siltation. The proposed drainage following construction would be similar to existing drainage patterns, with the exception of direction of flow with regard to the existing earthen median that would be removed to construct the tolled express lanes and shoulders, as well as the addition of retaining walls. These improvements and additions would require the removal of existing inlets and addition of new inlets along the new edge of shoulder to collect and convey stormwater throughout the Project limits. Additionally, new

longitudinal storm drain lines running parallel to I-15 would be constructed to connect the new inlets to the existing transversal storm drain lines.

Upon completion of construction, the Project is expected to result in approximately 125 acres of new impervious surface, which would include a permanent increase in new impervious surface of approximately 82 acres and a replacement of approximately 43 acres of existing impervious surface. Treatment BMPs consisting of Caltrans-approved treatment BMPs are proposed to treat the area. It is anticipated the treatment BMPs would be able to accommodate and treat 100 percent of the additional runoff created by the new impervious area within the Project limits; this would be confirmed during the final design phase. The Project is not expected to result in the release of pollutants due to Project inundation. Impacts are considered less than significant.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less-than-Significant Impact

The Project is over 25 miles northeast of the Pacific Ocean. Therefore, the Project is not located in a tsunami hazard zone. Seiches are periodic oscillations of water in enclosed waterbodies, such as a lake or bay, and are typically caused by earthquakes. The closest enclosed waterbodies to the Project are Lake Elsinore (approximately 0.5 mile south of I-15), Lee Lake (approximately 800 feet east of I-15), and Lake Mathews (approximately 3.5 miles east of I-15). Although Lee Lake is in proximity to the Project limits, potential impacts on the Project from seiches are anticipated to be low because Lee Lake is lower in evaluation than I-15. In addition, I-15 is an existing freeway and implementation of the Project would not increase the risk level from inundation by seiche; the risk level would remain the same.

As previously discussed in threshold (c), the Project is within FEMA-designated 1-percent annual chance (100-year) floodplains associated with Arroyo del Toro Channel, Stovepipe Canyon Wash, Temescal Creek, Mayhew Wash, Coldwater Wash, and Bedford Wash. However, based on hydraulic analyses conducted for the proposed bridge widenings at Temescal Wash, Mayhew Wash, Coldwater Wash, and Bedford Wash, the improvements would result in a change in water surface elevation of less than 1 foot at each affected crossing, which is minimal and would be contained within the channels and meet freeboard requirements. In addition, bridge improvements would be structurally similar to the existing spans and alignments and would not alter the course of the water channels.

The drainage structures for Arroyo del Toro Channel and Stovepipe Canyon Wash that cross underneath I-15 would not be altered by the Project. Therefore, the hydraulics of Arroyo del Toro Chanel and Stovepipe Canyon Wash would remain the same. No hydraulic analyses were conducted for Arroyo del Toro Channel and Stovepipe Canyon Wash, and no floodplain impacts associated with these two channels would occur.

The Project would not result in any flood, tsunami, or seiche hazards that are substantially different from existing conditions. The Project does not include the permanent storage of any hazardous waste and materials within the Project limits and, therefore, risk of release of pollutants due to Project inundation from flood, tsunami, or seiche hazards is not applicable to the Project. Impacts are considered less than significant.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less-than-Significant Impact

As previously discussed in threshold (a), the Project would result in a Disturbed Soil Area of approximately 844 acres. In addition, construction of the Project would result in approximately 125 acres of new impervious area, which includes replacing approximately 43 acres of existing impervious surface and adding approximately 82 acres of new impervious surface. Project construction would require compliance with the Santa Ana RWQCB Basin Plan (California Water Board 2019) and the Caltrans NPDES Statewide Storm Water Permit and NPDES Construction General Permit (Standard Project Measure **WQ-1**), which requires compliance with State and federal water quality regulations regarding construction and operational water quality discharge; the Project would not conflict with or obstruct the implementation of any applicable water quality control plans or groundwater management plans. Impacts are considered less than significant.

3.1.11 Land Use and Planning

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Physically divide an established community?	☐	☐	☐	☒
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

3.1.11.1 CEQA Significance Determinations for Land Use and Planning

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts related to land use and planning was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Community Impact Assessment* (Caltrans 2024b) and in Sections 2.2.1, *Existing and Future Land Use*, 2.2.3, *Growth*, and 2.2.4, *Community Character and Cohesion*. The following discussion is based on those analyses.

a) Physically divide an established community?

No Impact

The physical division of an established community typically refers to the construction of a physical feature (such as an interstate highway or railroad tracks) or removal of a means of access (such as a local road or bridge) that would impair mobility within an existing community, or between a community and an outlying area. The Project would be expanding the already existing freeway with the addition of two tolled express lanes in both the northbound and southbound directions in the median of the existing I-15. Because all of the improvements associated with the Build Alternative (Preferred Alternative) would occur within existing Caltrans right of way, no property acquisitions or relocations would be required under the Build Alternative (Preferred Alternative) and the Project would not divide an existing neighborhood or fragment a cohesive community. No temporary construction easements (TCEs) are anticipated to be required for the Project. Although not expected, if a TCE is needed during construction, it is anticipated to be in Caltrans right of way. If it is outside Caltrans right of way, then the location would be environmentally cleared for the temporary duration. Regardless, no land use conversion would occur.

Therefore, the Build Alternative (Preferred Alternative) would not divide an existing neighborhood or create barriers between existing communities. There would be no impact.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Significant and Unavoidable Impact

The Build Alternative's (Preferred Alternative) consistency with State, regional, and local plans and programs is analyzed in detail in Section 2.2.1, *Existing and Future Land Use*, of this EIR/EA. The Build Alternative (Preferred Alternative) would not change existing land use patterns along I-15 because I-15 is an existing transportation facility in a highly developed area, and the Build Alternative (Preferred Alternative) would not require property acquisition. The Project is consistent with most of the adopted goals and policies of applicable State, regional, and local plans and programs, with the exception of California's AB 32 Climate Change Scoping Plan, SCAG 2024–2050 RTP/SCS, and County of Riverside General Plan (2021) identified in Section 2.2.1. This conflict is explained in more detail in Section 3.3, Climate Change. Because operational emissions would increase, the Project would conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Caltrans is firmly committed to implementing measures to help reduce GHG emissions. Mitigation Measures **GHG-1** through **GHG-4** and **GHG-11**, and **AQ-5** as well as Standard Project Measure **EN-1** and Standard Project Measure **AQ-4**, are expected to reduce construction GHG emissions. Mitigation Measures **GHG-5** through **GHG-11** and **AQ-6** through **AQ-8** would reduce the GHG emissions and potential climate change impacts from the operation and maintenance of the Project. However, the impacts would remain significant and unavoidable, as the Project is still inconsistent with the California AB 32 Climate Change Scoping Plan.

3.1.12 Mineral Resources

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☒	☐
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☒	☐

3.1.12.1 CEQA Significance Determinations for Mineral Resources

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

Less-than-Significant Impact

The mineral resources addressed in this section pertain to those resources that are classified under the State Mining and Reclamation Act of 1975. Riverside County has diverse mineral resources, including extensive deposits of clay, limestone, iron, sand, and important aggregates (i.e., crushed rock, sand, and gravel) that have been influential in the development of the area and serve as an important component of the county's economy. The history of the Project area includes mineral extraction; however, due to urbanization, much of the activity has been phased out over time and the areas have been converted to other land uses, such as residential and commercial uses (City of Lake Elsinore 2011). Classification of land within California takes place according to a priority list established by the State Mining and Geology Board (SMGB) in 1982, or when SMGB is petitioned to classify a specific area. SMGB established Mineral Resource Zones (MRZs) to designate lands that contain mineral deposits. MRZs are designated into four classes that indicate the potential for a specific area to contain significant mineral resources:

- **MRZ-1:** Areas where the available geologic information indicates there is little or no likelihood of significant mineral deposits
- **MRZ-2:** Areas underlain by mineral deposits where geological data indicate that significant measured or indicated resources are present or where adequate

information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists

- **MRZ-3:** Areas containing known mineral occurrences of undetermined mineral resources significance

- **MRZ-4:** Areas of known mineral occurrences where geological information does not rule out the presence or absence of significant mineral resources

The Project is primarily underlain by MRZ-3 lands. Portions along the Project, beginning in the City of Corona and throughout the unincorporated Riverside County area, are underlain by MRZ-2 lands, as described in the County of Riverside General Plan (County of Riverside 2015). Additionally, there are several active mines near the Project alignment including Nichols Canyon Mine (aggregate mining operation), which is east of I-15, and approximately 156 acres north of Nichols Canyon Road; and approximately 43 acres south of Nichols Canyon Road, in the northeastern portion of the City of Lake Elsinore (California Department of Conservation 2016). Although the Project overlays areas identified as potentially containing mineral deposits, construction and operation of the Project would be within the existing State right of way and mineral extraction is not allowed within the State right of way. Construction and operation of the Project would not cause a loss of availability of a known mineral resource that would be of value to the region and the residents of the state, and the Project would have a less-than-significant impact related to mineral resources.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

Less-than-Significant Impact

Significant clay resources are associated with the area just south of I-15 and west of Lake Street, known as the Pacific Clay Products deposits, which are within the approved Alberhill Specific Plan and pending Alberhill Villages Specific plan (City of Lake Elsinore 2011). However, the mining activity is being phased out in accordance with approved permits, and the continued use and ultimate reclamation of these lands has been or will be addressed in the specific plans prepared for these areas (City of Lake Elsinore 2011). Furthermore, the Project LOD has previously experienced substantial ground disturbance due to construction of the freeway and urban development surrounding much of the freeway alignment. Being that the Project lies primarily in the median of an established freeway and would consist primarily of grading and paving in that location, it is unlikely that any locally or regionally important mineral resource would be affected by Project construction. The Project would result in a less-than-significant impact on known mineral resources that are of value locally, for the region or state.

3.1.13 Noise

Would the project result in:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

3.1.13.1 CEQA Significance Determinations for Noise

The potential for the Build Alternative (Preferred Alternative) to result in significant impacts related to Noise was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Noise Study Report* (Caltrans 2024c) and Section 2.3.7, *Noise*, in this EIR/EA. The following discussions are based on those analyses.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less-than-Significant Impact

The primary factor considered by Caltrans in assessing the significance of noise impacts is the future increase in traffic noise. Significant impacts are assessed if noise-

sensitive receptors will be exposed to a *substantial* increase in traffic noise levels between the Existing and Design-Year Build conditions. If the character of the noise is unchanged, like in the case of varying traffic noise levels, sound level increases of 3 A-weighted decibels (dBA) are generally perceived as barely perceptible and 5 dBA as readily perceptible. For the purposes of assessing potential noise impacts, a traffic noise increase of 12 dBA between Existing and Design-Year Build conditions is considered to be a *substantial* increase. Noise-sensitive locations have been categorized by similar land use types and evaluated for significance; these categories include residential locations, recreational locations, and outdoor commercial locations. For the purpose of this noise analysis, the noise Project study area is divided into 20 separate Noise Analysis Areas that are based on major local intersections (see Section 2.3.7, *Noise*, for more information).

Residential Locations

The noise levels at residential locations in the Project study area would range from 40 dBA average hourly equivalent noise level (L_{eq}[h]) to 75 dBA L_{eq}(h) under the Existing condition. Noise levels under the Design-Year Build condition would range from 42 dBA L_{eq}(h) to 72 dBA L_{eq}(h). The changes during the Design-Year Build condition relative to the Existing condition would range from a -2 dBA decrease to a 3 dBA increase. Large reductions in predicted noise levels under the Design-Year condition relative to the Existing condition are due to the construction of the permitted projects discussed in Section 2.3.7.2 of this EIR/EA; some of these projects would be constructed between I-15 and existing land uses, creating new buildings and property line walls that would shield the existing land uses from freeway traffic noise. The largest increase in noise levels for the Design-Year condition relative to the Existing condition is 3 dBA, which is a barely perceptible difference in traffic noise levels and is well below the 12-dBA threshold of significance for CEQA. Therefore, traffic noise impacts at residential locations in the Project study area would be less than significant.

Recreational Locations

The noise levels at recreational locations in the Project study area would range from 56 dBA L_{eq}(h) to 74 dBA L_{eq}(h) under the Existing condition. Noise levels under the Design-Year Build condition would range from 56 dBA L_{eq}(h) to 76 dBA L_{eq}(h). The changes during the Design-Year Build condition relative to the existing condition would range from a 3 dBA decrease to a 2 dBA increase. The only exception is a trail node at the Serrano Single-Family Home Community, detailed in Section 2.3.7.2 of this EIR/EA. There is a projected increase of up to 9 dBA at this location. However, the community, including the trail node, was not yet constructed under the existing condition. Because the existing noise level and resulting estimated noise increase do not represent the finished trail node geometry, the community was excluded from the determination of significance for recreational locations. The largest increase in noise levels for the Design-Year condition relative to the existing condition is 2 dBA, which is less than a barely perceptible difference of 3 dBA and is well below the 12-dBA threshold of significance for CEQA. Therefore, traffic noise impacts at recreational locations in the Project study area would be less than significant.

Outdoor Commercial Locations

The noise levels at outdoor commercial locations in the Project study area would range from 45 dBA $L_{eq}(h)$ to 75 dBA $L_{eq}(h)$ under the Existing condition. Noise levels under the Design-Year Build condition would range from 47 dBA $L_{eq}(h)$ to 77 dBA $L_{eq}(h)$. The changes during the Design-Year Build condition relative to the existing condition would range from a -11 dBA decrease to a 3 dBA increase, which is a barely perceptible increase in traffic noise levels and well below the 12-dBA threshold of significance for CEQA. Therefore, the traffic noise impacts at outdoor commercial locations in the Project study area would be less than significant.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less-than-Significant Impact

Any groundborne noise or vibration would be limited to the construction period and would be short in duration.

In general, literature on the subject shows that only blasting, pile driving, and pavement breaking have documented examples of potential damage to buildings (Caltrans 2020a). For pile driving and pavement breaking, the potential for damage from vibration is at locations in relatively close proximity to the activity. The worst-case groundborne vibration levels associated with the Project would be from pile driving. Pile driving is expected to occur at multiple bridge foundation locations along the Project alignment and at recommended noise barrier locations. Groundborne vibration levels in excess of 0.25 inch per second (in/sec) Peak Particle Velocity (PPV) are considered the threshold for potential damage to historic buildings and other old structures (Caltrans 2020a). This is conservatively used as the threshold for assessing potential impacts for the Project because newer buildings can withstand higher levels of groundborne vibration without being damaged.

Potential vibration impacts due to impact pile driving were estimated using the criteria for impact pile drivers provided in the Caltrans *Transportation and Construction Vibration Guidance Manual* (Caltrans 2020a). PPV is estimated to reduce at a rate of $PPV_{Ref} \times (25/D)^{n} \times (E_{equip}/E_{Ref})^{0.5}$, where:

- PPV_{Ref} = 0.65 in/sec at a reference distance of 25 feet
- D = distance from the pile driver to the receiver in feet
- n = 1.1 is the value related to attenuation of vibration throughout the ground
- E_{Ref} = 36,000 foot-pound (rated energy of reference pile driver)
- E_{equip} = rated energy of impact pile driver in foot-pounds (assumed same as reference)

An impact pile driver is estimated to produce a vibration level of 0.65 in/sec PPV at a reference distance of 25 feet (Caltrans 2020a); therefore, it is calculated that any structure within 60 feet of impact pile driving could experience vibration damage, depending on its age and condition. Cast-in-drilled-hole (CIDH) piles are planned to be used in place of impact pile driving in some locations, including for sound wall construction. Vibration levels from CIDH pile installation would be much lower than for impact pile driving and would primarily be produced while drilling the holes for the piles. The *Caltrans Transportation and Construction Vibration Guidance Manual* identifies that drills would produce 0.089 in/sec PPV at a distance of 25 feet, which would be below the damage threshold for historic and other old buildings (Caltrans 2020a).

The closest building to any possible pile-driving location would be approximately 75 feet away. This is outside the 60-foot range of potential impacts identified above and vibration levels would be on the order of 0.19 in/sec PPV, which is below the threshold of 0.25 in/sec PPV. This is also well outside the range of potential impacts for CIDH pile installation. As a result, groundborne vibration from Project construction would be below the 0.25 in/sec PPV damage potential threshold at all buildings in the study area. Therefore, groundborne vibration and noise effects would be less than significant.

The Project does not involve changes that would result in noticeable increases in groundborne vibration or groundborne noise levels from use or maintenance of the roadway when compared with the No Build Alternative. Once construction of the Project is complete, long-term increases in groundborne vibration or groundborne noise levels from use or maintenance of the roadway would be less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact

The Project would not create any new receptors or land uses that would be sensitive to aircraft noise. There are no airports or private airstrips in the vicinity (i.e., within 2 miles) of the Project site. The closest airport is Corona Municipal Airport, which is more than 5.6 miles to the northeast. At this distance, the Project site is not exposed to substantial noise levels from aircraft operations. In addition, the Project would not change the operations at any airport or airstrip, and would not alter the aircraft noise exposure at any existing sensitive land uses. As such, Project implementation would not expose people residing or working in the vicinity of the Project to excessive aircraft noise levels. Therefore, there would be no impact.

3.1.14 Population and Housing

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

3.1.14.1 CEQA Significance Determinations for Population and Housing

The potential for the Build Alternative (Preferred Alternative) to result in significant impacts related to population and housing was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Community Impact Assessment* (Caltrans 2024b) and Section 2.2.3, *Growth*, and Section 2.2.4, *Community Character and Cohesion*, in this EIR/EA. The following discussions are based on those analyses.

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less-than-Significant Impact

The potential of growth-related impacts resulting from the Build Alternative (Preferred Alternative) was considered in the context of the first-cut screening analysis approach, as demonstrated in Section 2.2.3, *Growth*. That analysis determined that the Build Alternative (Preferred Alternative) would generate additional short-term employment opportunities during construction, which would be filled by local residents. Long-term substantial population growth associated with Project construction is not anticipated. The Project also would not establish new homes or provide any new access into areas that previously had no access, which could prompt development. Even though the Project would improve mobility and transportation options, these changes have already been identified in the 2025 FTIP and SCAG's 2024–2050 RTP/SCS for Riverside County under project number 3160001-RIV170901. Operation of the Project would not

result in additional substantial growth over the growth already identified in SCAG's 2024–2050 RTP/SCS.

While the Project would include the construction of additional transportation infrastructure (i.e., noise barriers, retaining walls, and bridge widening), the construction activity would be contained within Caltrans right of way as well as within the existing median of I-15.

Projected population growth would occur in the study area with or without the improvements associated with the Project. In addition, potential indirect growth has already been captured at the local and regional level through the inclusion of the Project in SCAG's 2024-2050 RTP/SCS list of projects. Therefore, construction or operation of the Build Alternative (Preferred Alternative) would not induce substantial unplanned population growth, either directly or indirectly. The impact is considered less than significant.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact

The Project area consists of an existing freeway with retaining walls, and other structural features. Existing land use types within 0.5 mile of the Project area are shown on Figure 2.2.1-1 in Section 2.2.1 of this EIR/EA and include commercial and services, general office, under construction, facilities, education, industrial, single-family residential, multifamily residential, mobile homes and trailer parks, mixed residential, rural residential, mixed commercial and industrial, agriculture, open space and recreation, water, transportation/communications/utilities, and others such as highways and roads. The improvements proposed under the Build Alternative (Preferred Alternative) would add additional express lanes to the already existing I-15. There would be no direct or indirect, permanent or temporary impacts on housing characteristics such as rent, housing prices, occupancy, housing type, or population projections requiring additional residential units, as a result of the Build Alternative (Preferred Alternative). The Project would be improving existing transportation infrastructure. No displacements requiring relocation of residential uses or construction of housing would occur. Therefore, because the Build Alternative (Preferred Alternative) would not displace existing housing or people or require the acquisition of any residential units, there would be no impact.

3.1.15 Public Services

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Fire protection?	☐	☐	☒	☐
Police protection?	☐	☐	☒	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☒	☐

3.1.15.1 CEQA Significance Determinations for Public Services

The potential for the Build Alternative (Preferred Alternative) to adversely affect public services and facilities is assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Community Impact Assessment* (Caltrans 2024b) and Section 2.2.1, *Existing and Future Land Use*; Section 2.2.3, *Growth*; and Section 2.2.7, *Utilities and Emergency Services*, in this EIR/EA. The following discussions are based on those analyses.

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

Fire protection?

Less-than-Significant Impact

There is one fire station and no police stations within the community impact study area and several fire and police stations just outside the community impact study area. As described earlier in threshold (f) in Section 3.1.9, emergency services may experience direct temporary impacts as a result of construction activities that may affect traffic within the service area. Continuous access and connectivity would be maintained during construction with Standard Project Measure **TR-1**. The TMP would specifically address requirements for coordination with emergency service providers and accommodation of emergency travel routes and access to, through, and around active construction areas. Therefore, the Build Alternative (Preferred Alternative) would not result in permanent or temporary substantial adverse impacts on emergency service response times within the community impact study area. Additionally, because the Project is within fire hazard zones, Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)** would ensure that construction activities avoid or minimize the risk of fires. The Project shall also comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a fire prevention plan. The Project itself would not cause direct or indirect permanent or temporary impacts on emergency services, response times, or the demand of services, as the Project does not propose any new residential, commercial, or industrial developments that would encourage growth, as discussed in Section 2.2.3, *Growth*. Impacts are considered less than significant.

Police protection?

Less-than-Significant Impact

Construction of the Build Alternative (Preferred Alternative) would result in temporary impacts on traffic circulation including emergency services. Those impacts would be addressed by Standard Project Measure **TR-1** during construction. The TMP would specifically address requirements for coordination with emergency service providers and accommodation of emergency travel routes and access to, through, and around active construction areas. In the long term, the Project would improve the operation of the freeway facilities. These improvements in traffic flow are likely to improve emergency response times within the Project limits. The impacts of both construction and operation of the Project on the delivery of emergency services would be less than significant. Therefore, operation of the Build Alternative (Preferred Alternative) would not result in adverse effects on the delivery of emergency services in the long term.

Schools?

Less-than-Significant Impact

There are no planned schools within 0.5 mile of the Project limits. However, eight existing schools are within 0.5 mile of the Project limits (see Section 3.1.11, *Land Use and Planning*, and Appendix A, *Section 4(f)*, for more information on schools near the Project).

A TMP per Standard Project Measure **TR-1** would minimize direct temporary impacts on traffic and circulation within the study area and maintain continuous access and connectivity throughout construction activities. The potential impacts on schools as a result of the Build Alternative (Preferred Alternative) would be less than significant.

Parks?

Less-than-Significant Impact

Construction of the Project may result in a temporary increase in travel times for the public in accessing local parks and recreation facilities, but access would be maintained throughout the duration of construction via the transportation management strategies in the TMP (Standard Project Measure **TR-1**).

As previously discussed, no property acquisitions, relocations, or TCEs would be required under the Build Alternative (Preferred Alternative). Therefore, the impacts of the Project on parks would be less than significant.

Other public facilities?

Less-than-Significant Impact

The Project would not result in the permanent conversion of land use or in temporary closures of any community facilities. The Build Alternative (Preferred Alternative) may result in temporary delays in travel time to and from community facilities but these would be minimized with Standard Project Measure **TR-1**. The Project would not result in permanent impacts on any community facilities. Therefore, impacts on other public facilities would be less than significant.

3.1.16 Recreation

	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

3.1.16.1 CEQA Significance Determinations for Recreation

The potential for the Build Alternative (Preferred Alternative) to adversely affect recreational resources was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Community Impact Assessment* (Caltrans 2024b); Section 2.2.1, *Existing and Future Land Use*; and Appendix A, *Section 4(f)*, in this EIR/EA. The following discussions are based on the findings of that analysis.

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less-than-Significant Impact

As discussed in Section 3.1.15 above, the Project would not influence growth beyond what is currently planned and, therefore, would not result in an increase in the use of existing neighborhood and regional parks or other recreational facilities such that substantial deterioration of the facility would occur. No property acquisitions or relocations would be required under the Build Alternative (Preferred Alternative). No TCEs would be required for the Project. If a TCE is needed during construction, it would not encroach on any existing or proposed recreational facilities. There are no construction activities proposed adjacent to or on parks or any other recreational facilities, with the exception of the El Cerrito Sports Park, which is adjacent to and shares a boundary with the Project LOD. However, the Project would not affect access to the facility. The Build Alternative (Preferred Alternative) would result in a less-than-

significant impact under CEQA during construction. There would be no operational impact on the physical deterioration of existing neighborhoods and regional parks or other recreational facilities.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact

The Project does not include the construction of new recreational facilities or require the expansion of existing recreational facilities. Therefore, the Project would have no impact related to constructing new or expanded recreation facilities.

3.1.17 Transportation

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

3.1.17.1 CEQA Significance Determinations for Transportation

The potential for the Build Alternative (Preferred Alternative) to result in adverse traffic impacts was assessed in the *I-15 Express Lanes Project Southern Extension (ELPSE) Traffic Operations Analysis Report* (Caltrans 2022c), and in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, in this EIR/EA. The following discussions are based on those analyses.

a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less-than-Significant Impact

Although not anticipated, the Project may temporarily affect existing pedestrian and bicycle facilities during the construction of bridge widenings. Potential construction-related traffic and circulation impacts, and impacts on pedestrian and bicycle facilities, including Americans with Disabilities Act facilities, would be minimized or avoided through Standard Project Measure **TR-1**. The Build Alternative (Preferred Alternative) would not conflict with adopted policies, plans, or programs regarding public transit,

bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Impacts are considered less than significant under CEQA.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less-than-Significant Impact

On September 27, 2013, California Governor Edmund Gerald Brown, Jr. signed Senate Bill (SB) 743 into law, which requires lead agencies under CEQA to identify new methodologies for transportation analyses that are intended to encourage "land use and transportation planning decisions and investments that reduce VMT and contribute to the reductions in greenhouse gas emissions required in the California Global Warming Solutions Act of 2006."[4] Following the signing of SB 743, CCR, Title 14, §15064.3 was adopted in December of 2018, which provides guidance on implementation of SB 743 for land use and transportation projects.

Senate Bill 743 (2013) amended CEQA to allow the Governor's Office of Planning and Research to develop new guidelines under CEQA establishing alternative metrics to levels of service for the analysis of transportation impacts. On December 28th, 2018, the Office of Administrative Law approved the amendments to the CEQA Guidelines including changes related to Senate Bill 743. The amended CEQA Guidelines add a new section on determining the significance of transportation impacts, and generally specify VMT as the most appropriate measure of transportation impacts. In 2020, Caltrans prepared guidance documents for the implementation of Senate Bill 743 and adopted VMT as the CEQA transportation metric. These documents, the "Transportation Analysis Framework" and "Transportation Analysis under CEQA," along with other information can be found on the Caltrans Senate Bill 743 website.

The intent of SB 743 is to better align CEQA practices with statewide sustainability goals related to efficient land use, greater multimodal transportation choices, and GHG and traffic-related air pollution reductions while balancing the needs of congestion management and safety. SB 743 changes the metric of consideration for transportation impacts pursuant to CEQA from a focus on automobile delay to alternative methods focused on VMT to analyze transportation impacts. Lead agencies had until July 1, 2020, to comply with the new VMT metric for analyzing transportation impacts, although they could have voluntarily complied earlier (CCR Section 15064.3(c)).

Consistent with SB 743, Caltrans determined that VMT is the most appropriate metric for determining the significance of transportation impacts under CEQA for capacity-increasing transportation projects on the State Highway System. Caltrans' VMT CEQA Significance Determinations for State Highway System Projects: Implementation Timeline Memorandum Update (September 10, 2022) outlines, among other items, when an analysis is needed to support a VMT-based transportation impact significance determination. The memorandum states: "Projects initiated on or after December 28,

[4] California Legislative Information. 2013. *Senate Bill No. 743 CHAPTER 386.* Available: http://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201320140SB743 Accessed: June 7, 2019.

2018, which have reached or will reach Caltrans' Milestone 020 ('Begin Environmental') before September 15, 2020, will be evaluated by the Department in consultation with project sponsors on a case-by-case basis to determine if the use of a VMT-based transportation impact significance determination in the draft environmental document is warranted."

As previously noted, projects are required to adhere to the requirements of SB 743 as of July 1, 2020; however, the Project was initiated prior to this date. Furthermore, a VMT Analysis Screening Form was prepared for the Project in 2020. In the form, it was documented that Caltrans' Milestone 020 was achieved for the Project on July 3, 2019, and prior to the September 15, 2020, date included in the previously referenced Implementation Memorandum.

Moreover, while VMT is analyzed in connection with air quality, climate change, and GHG impacts in Section 3.3, it is not analyzed as a transportation impact herein under CEQA because the Notice of Preparation circulated for this Final EIR/EA in October 2019 predated July 1, 2020, when the State CEQA Guidelines were amended to provide a general rule that VMT is the most appropriate measure of transportation impacts (see State CEQA Guidelines, §§ 15007 ["Amendments to the [State CEQA] Guidelines apply prospectively only"]; 15064.3 [provisions of this section shall apply statewide beginning July 1, 2020]).

Therefore, a VMT analysis under CEQA for determining the significance of transportation impacts is not required for the Project. This determination, as documented in the VMT Analysis Screen Form, was concurred with by Caltrans on August 11, 2020. No avoidance, minimization, or mitigation measures are required.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less-than-Significant Impact

The Project would be designed, constructed, and operated consistent with Caltrans' *Highway Design Manual* (Caltrans 2020b) and other applicable standards and specifications with exceptions to design standards to minimize environmental or right of way impacts and avoid added costs to the Project. Refer to Tables 1-6 and 1-7 in Chapter 1 for a full list of nondelegated boldface design features and underlined design features both requiring approval prior to construction for incorporation in the Project design. The design exceptions would not increase any hazards or hazardous situations and the Build Alternative (Preferred Alternative) would not include hazardous design features. Furthermore, pedestrians and bicyclists would continue to be prevented from entering and operating on the I-15 mainline and ramps. The Build Alternative (Preferred Alternative), including design exceptions, is not anticipated to substantially increase hazards and impacts are considered less than significant under CEQA.

d) Result in inadequate emergency access?

Less-than-Significant Impact

As described earlier in thresholds (a) and (b) in Section 3.1.15, construction of the Project is expected to result in temporary impacts on traffic circulation, which could affect emergency service vehicles. Standard Project Measure **TR-1** would be implemented during construction to ensure that impacts are avoided and/or minimized. The TMP shall specifically address requirements for coordination with emergency service providers and accommodation of emergency travel routes and access to, through, and around active construction areas. In the long term, the Project is expected to improve the operation of the freeway facilities. These improvements in traffic flow are likely to improve emergency response times within the Project limits. The impacts of both construction and operation of the Build Alternative (Preferred Alternative) on the delivery of emergency services are considered less than significant under CEQA.

3.1.18 Tribal Cultural Resources

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☒	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

3.1.18.1 CEQA Significance Determinations for Tribal Cultural Resources

The potential for the Build Alternative (Preferred Alternative) to result in adverse impacts on tribal cultural resources was assessed in the *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Historic Property Survey Report (HPSR)* (Caltrans 2023c), *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Archaeological Survey Report (ASR)* (Caltrans 2023d), *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Historical Resources Evaluation Report (HRER)* (Caltrans 2023e),

and *Interstate 15 Express Lanes Project Southern Extension (ELPSE) Finding of No Adverse Effect (FOE)* (Caltrans 2023f) and Section 2.2.10, *Cultural Resources*, in this EIR/EA. The following discussions are based on those analyses.

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less-than-Significant Impact

Project archaeologists sent a letter to the Native American Heritage Commission on September 13, 2019, requesting a search of the Sacred Lands File and a list of potentially interested Native American groups and individuals. The Native American Heritage Commission responded on October 1, 2019, stating that a search of the Sacred Lands Files was positive for sacred lands or TCPs in proximity to the APE.

During consultation between Caltrans District 8, on behalf of FHWA, and the Pechanga Band of Luiseño Indians for another nearby project, the tribe identified three TCPs: *Túu'uv* (TCP-1), *Qaxáalku Payómik* (TCP-2), and *Qaxáalku Kwíimik* (TCP-3). The full extent and exact boundaries of each TCP are not currently defined by the tribe, but together these TCPs comprise a vast, undefined geographic area that overlaps with portions of the current Project's APE and APE vicinity. The TCPs are considered by the tribe to be eligible for the NRHP under all four evaluation criteria. Therefore, Caltrans assumes these three TCPs are eligible for the NRHP under Criteria A, B, C, and D for the purposes of this Project only. The Caltrans Cultural Studies Office approved the assumption of eligibility for the three TCPs on March 10, 2022. See Section 2.2.10, *Cultural Resources*, for a full summary of Native American consultation completed for this Project.

As detailed in Section 2.2.10, *Cultural Resources*, there are archaeological sites within the APE that are considered eligible for inclusion in the NRHP for the purposes of this Project only because they would be protected in their entirety from any potential effects through the establishment of an ESA, in accordance with Section 106 PA Stipulation VIII.C.4. There are seven historic properties within or adjacent to the APE for the purposes of this Project (Table 3-3 in Section 3.1.5, *Cultural Resources*).

Four of the seven historic properties are prehistoric archaeological sites that would be avoided and protected with an ESA for each and would follow Caltrans Standard Specifications 14-1, 14-2, and 16-2.03 (Caltrans 2023i). Therefore, the Project has a finding of "no adverse effect with standard conditions" (i.e., a Finding of No Adverse

Effect) for the four prehistoric historic properties. The other three resources are the identified TCPs. Based on the limited percentage of permanent impacts on the overall TCPs and the lack of impacts on potentially contributing archaeological sites, a Finding of No Adverse Effect on the TCPs also is applicable (see Sections 2.2.10, *Cultural Resources*, and 3.1.5, *Cultural Resources*, for more information).

Overall, the undertaking would have No Adverse Effect on the four archaeological sites and three TCPs. Caltrans District 8, in applying the Criteria of Adverse Effect, proposes that a Finding of No Adverse Effect is appropriate, and the SHPO supplied concurrence in the finding, pursuant to 36 CFR 800.5(c) and 106 PA Stipulation X.B.2 on May 26, 2023. Although a low potential has been determined, in general, it is possible that previously undocumented cultural materials or human remains may be unearthed during site preparation, grading, or excavation for the Build Alternative (Preferred Alternative). Those potential effects would be avoided or minimized through Standard Project Measures **CR-1** through **CR-4** (see Section 2.2.10, *Cultural Resources*, for full measure text); therefore, less-than-significant impacts are anticipated related to tribal cultural resources.

3.1.19 Utilities and Service Systems

Would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☐	☒
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

3.1.19.1 CEQA Significance Determinations for Utilities and Service Systems

The potential for the Build Alternative (Preferred Alternative) to adversely affect utilities and service systems was assessed in the Section 2.2.7, *Utilities and Emergency Services*, in this EIR/EA. The following discussions are based on those analyses.

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

No Impact

The Build Alternative (Preferred Alternative) is expected to require conduit connections to existing power sources, which include private utility companies. As described in Section 2.2.7, *Utilities and Emergency Services*, 280 utilities are within the study area: 88 telecommunication, 67 electrical power, 33 natural gas, 63 water, 27 sewers, and three casing. All utilities would be protected in place. Therefore, the Project would have no impact on relocation or construction of utilities.

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less-than-Significant Impact

The use of water during construction would be limited to water trucked to the site for dust control. The amount of water used during construction would be minimal. Operation of the Build Alternative (Preferred Alternative) is not expected to result in an increased demand for water used for landscape irrigation. As a result, the Build Alternative (Preferred Alternative) would not require the water districts serving the Project to provide new or expanded facilities to meet the need for water during construction and operation of the Project. Therefore, the impact would be less than significant.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact

The Build Alternative (Preferred Alternative) would not generate wastewater or discharge wastewater to the area sewer system. As a result, the Project would not exceed wastewater treatment requirements, require or result in the construction of new wastewater treatment facilities, or result in the need for a determination by a wastewater treatment provider that it has adequate capacity to serve the Project area. Therefore, there would be no impact.

d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less-than-Significant Impact

During construction, two types of waste materials would be collected: vegetation, other plant material, and excess soils; and solid waste such as concrete, asphalt, and wood. The waste collected during construction would be properly disposed of at an existing landfill or recycled. The amount of waste that would be generated during construction of the Build Alternative (Preferred Alternative) would be limited and would cease once construction is complete. That amount of waste would be only a very small amount of the total waste disposed of or recycled at area recycling facilities and landfills, on both a daily and annual basis. Therefore, the amount of waste generated during construction of the Project is anticipated to be accommodated by the existing recycling and landfill facilities in Riverside County.

Trash/waste removal would continue consistent with current maintenance activities during operation. There would be similar amounts of trash/waste collected during operation of the Project compared to existing conditions, because the Project would consist of roadway expansion within the State right of way. Therefore, the amount of waste generated during operation of the Build Alternative (Preferred Alternative) would be negligible and is considered less than significant.

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Less-than-Significant Impact

Any hazardous waste generated during construction of the Build Alternative (Preferred Alternative), collected during normal waste collection activities, or collected as a result of an accidental release on I-15 freeway or ramp facilities would be collected, handled, transported, and disposed of consistent with applicable federal, State, regional, and local regulations. Hazardous wastes would not be mixed with green waste or non-hazardous trash. Therefore, impacts are considered less than significant.

Waste materials generated during construction and operation of the Project would be disposed of in accordance with federal, State, and local regulations related to recycling, which would minimize the amount of waste material entering local landfills; as such, impacts are considered less than significant.

3.1.20 Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

3.1.20.1 CEQA Significance Determinations for Wildfire

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact

The Project limits traverse the City of Lake Elsinore, the City of Corona, and portions of unincorporated Riverside County. Both cities and Riverside County have Emergency Operations Plans, which provide guidelines for emergency response planning,

preparation, training, and execution throughout their jurisdictions. I-15 would remain in operation throughout the duration of construction activities, and the TMP (Standard Project Measure **TR-1**) would minimize any construction-related delays, provide detours as needed, and require coordination with California Highway Patrol and local law enforcement agencies. The Project would not impair or physically interfere with implementation of applicable emergency response, from construction through long-term operations. No potential evacuation routes would be impeded or disrupted during Project construction and operation. The Project is not expected to cause a substantial increase in emergency response times during construction, especially with Standard Project Measure **TR-1**. Therefore, there would be a less-than-significant impact.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less-than-Significant Impact

According to CAL FIRE, the Project is within the Riverside County SRA and the City of Corona and City of Lake Elsinore LRAs. According to the CAL FIRE SRA and LRA maps, the Project footprint is within areas designated as moderate, high, and very high FHSZs. However, the Project is within the active I-15 transportation corridor, which predominantly consists of urban, developed, and disturbed environments. The Project would not alter the alignment of I-15 and would not run directly through areas with open space.

Generally, transportation projects, particularly those on existing alignments, are considered unlikely to exacerbate wildfire risks or post-fire flooding/landslides. However, Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)** would ensure that construction activities avoid or minimize the risk of fires. The Project shall also comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a fire prevention plan.

The Project would not exacerbate wildfire risks in or near an SRA, LRA, or elsewhere due to slope, prevailing winds, or other factors. Construction and operational activities would occur in areas of long-term commercial, industrial, and residential use. The Project is anticipated to be constructed entirely within the existing State right of way. Through proper site design and compliance with standard and emergency county access requirements, the Project would not exacerbate wildfire risk or expose the Project site to pollutant concentrations from a wildfire or uncontrolled spread of wildfire. There would be a less-than-significant impact.

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less-than-Significant Impact

The Project would construct two additional express lanes in both the northbound and southbound directions within the median from State Route (SR-) 74 (Central Avenue) through the Temescal Valley community, to El Cerrito Road in the City of Corona. Additional Project components include but are not limited to adding an auxiliary lane at two locations along I-15, installing advance signage, applying transition striping, widening up to 15 bridges within the Project limits, shifting the I-15 centerline 12 feet to the east between Cajalco Road and Weirick Road/Dos Lagos Drive, reconfiguring the southbound Weirick Off-Ramp, and installing roadside tolling equipment. No utilities would be relocated, and all utilities would be protected in place. The Project requires the installation and maintenance of tolling equipment that is similar in type and scope to express lanes existing along the I-15 transportation corridor. Construction of the median into express lanes would also extend the firebreak between the east and west sides of I-15, which is a benefit of the Project. Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)** would ensure that construction activities avoid or minimize the risk of fires. The Project would also comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a fire prevention plan. The Project is not expected to exacerbate wildfire risks or expose Project personnel to pollutants from a wildfire or the uncontrolled spread of a wildfire.

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less-than-Significant Impact

Although I-15 is relatively flat, hills are directly north and east of the existing transportation corridor. Implementation of standard Caltrans practices for erosion control and other BMPs (Avoidance and Minimization Measure **NC-12** and Caltrans Standard Specification 13-1.01D(2)) would avoid or minimize the Project's potential to result in downslope or downstream flooding or landslides. Therefore, the Project would not expose the public to a risk of post-fire slope instability or drainage changes. Impacts would be less than significant.

3.1.21 Mandatory Findings of Significance

	Significant and Unavoidable Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

3.1.21.1 CEQA Significance Determinations for Mandatory Findings of Significance

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less than Significant with Mitigation Incorporated

The potential for the Build Alternative (Preferred Alternative) to result in significant impacts on biological resources is discussed in Sections 2.4.1, 2.4.2, 2.4.3, 2.4.5, and 2.4.6, and summarized below.

While no direct impacts on LBV are anticipated, as a precaution, if LBV use areas were to occur within construction areas, a measure has been included to address direct construction impacts on LBV if they were to occur as a part of the Project, with potentially significant impacts. If this were to happen, with implementation of the Mitigation Measure **TE-3 (NES BIO-23)** and Avoidance and Minimization Measure **JPR-3**, significant direct construction impacts on LBV would be reduced to less-than-significant levels.

Impacts on MSHCP riparian/riverine resources from the Project would require compensatory mitigation to reduce impacts to less-than-significant levels under CEQA. Under the MSHCP, compensation for these losses shall be addressed through Mitigation Measures **NC-15 (NES BIO-15)**, **NC-16 (NES BIO-16)**, **NC-17 (NES BIO-17),** and **JPR-2**.

Mitigation Measures **NC-15 (NES BIO-15)**, **NC-16 (NES BIO-16)**, and **NC-17 (NES BIO-17)** shall be implemented to ensure direct impacts on federally and State-protected wetlands would be less than significant.

Within the BSA, trees are protected by the Riverside County Oak Tree Management Guidelines, Open Space and Conservation Policy, Ordinance 12.08, Tree Removal Ordinance 12.24.010, and the California State Senate Concurrent Resolution No. 17, Oak Woodlands.

Protected trees in the BSA include oak trees within both mapped Coast Live Oak Woodland and Forest and any other vegetation community containing oak trees. Other protected trees include trees within the right of way of the county highway.

With implementation of Mitigation Measure **NC-20 (NES BIO-19)**, all potential direct and indirect impacts on protected trees would be reduced to less-than-significant levels.

The Project would not eliminate important examples of the major periods of California history or prehistory. Overall, the undertaking, as currently proposed, would have No Adverse Effect on the four archaeological sites and three TCPs. Caltrans District 8, in applying the Criteria of Adverse Effect, proposes that a Finding of No Adverse Effect is appropriate and the SHPO supplied concurrence in the finding, pursuant to 36 CFR 800.5(c) and 106 PA Stipulation X.B.2 on May 26, 2023.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Significant and Unavoidable

An evaluation of the potential for the Project to have impacts that are individually limited but cumulatively considerable is included in Section 2.5, *Cumulative Impacts*, and Section 3.3, *Climate Change*. Although the Project is not expected to result in impacts that are individually limited but cumulatively considerable, the Project is projected to result in significant impacts related to GHG emissions that are considered significant and unavoidable. The analysis of GHG emissions provided in Section 3.3, *Climate Change*, is a cumulative analysis in that it considers the emissions of traffic generated by existing and future planned land uses and the effects of other future planned transportation improvements. As discussed in Section 3.3, because operational emissions are projected to increase under the Build Alternative (Preferred Alternative) in the Opening Year (2030) and Design Year (2050) when compared to the Existing (2019) condition and No-Build condition in the Opening and Design years, the Project would conflict with the goals included in the State's AB 32 Climate Change Scoping Plan and other regulations adopted for the purpose of reducing the emissions of GHGs. Mitigation Measures **GHG-1** through **GHG-4** and **AQ-5**, Standard Project Measure **EN-1**, and Standard Project Measure **AQ-4** are expected to reduce the Project's construction GHG emissions. Mitigation Measures **GHG-5** through **GHG-11** and **AQ-6** through **AQ-8** would reduce the GHG emissions and potential climate change impacts from operation and maintenance of the Project. However, the impacts would remain significant and unavoidable. Therefore, the Build Alternative (Preferred Alternative) would contribute to cumulative impacts related to climate change.

The Project's increases in air pollutant emissions are detailed in Section 3.1.3, *Air Quality*; the Project is located within a nonattainment area for the state PM_{10} and $PM_{2.5}$ ambient air quality standards. As such, the Project-related increase of PM_{10} and $PM_{2.5}$ would be a cumulative impact under CEQA. Even with Mitigation Measures **AQ-5** through **AQ-8**, air quality impacts would be cumulatively significant and significant and unavoidable under CEQA.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Significant and Unavoidable

The regional emission analysis presented in Table 2.3.6-10 indicates that operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase PM_{10} and $PM_{2.5}$ emissions when compared to both the existing and no-build conditions. As it is located within a nonattainment area for the state PM_{10} and $PM_{2.5}$ ambient air quality standards, the Project-related increase would be a cumulative impact under CEQA. However, RCTC has committed to air quality mitigation measures to reduce AQ impacts: Mitigation Measures **AQ-5** through **AQ-8**. For these four air quality mitigation measures, RCTC has committed to numerous programs to encourage Riverside County residents to use public transportation more often on a permanent basis, which would reduce vehicle use and its associated environmental impacts. This reduction in vehicle use would contribute to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. Even with implementation of **AQ-5** through **AQ-8**, impacts are considered to be significant and unavoidable.

The Project is projected to increase travel speeds and reduce travel times, but operational GHG emissions are still expected to increase over time compared to existing conditions and in the Opening Year (2030) and Future Year (2050) when comparing the Build Alternative (Preferred Alternative) to the No-Build Alternative. The impact is considered to be significant under CEQA and an adverse effect on human beings. Standard Project Measure **EN-1** and Standard Project Measure **AQ-4** would be implemented during construction activities to reduce impacts related to GHG emissions. Additionally, Mitigation Measures **GHG-1** through **GHG-4** and **AQ-5** are expected to reduce the Project's construction GHG emissions. Mitigation Measures **GHG-5** through **GHG-11** and **AQ-6** through **AQ-8** would reduce the GHG emissions and potential climate change impacts from operation and maintenance of the Project. However, because operational GHG emissions would increase over time compared to existing conditions, the impact is considered to be significant and unavoidable under CEQA. Because operational emissions would increase, the Project would conflict with the goals included in the State's AB 32 Climate Change Scoping Plan and other regulations adopted for the purpose of reducing the emissions of GHGs. The Scoping Plan provides a roadmap outlining key policies for California to implement to achieve its climate goals while improving the health and welfare of Californians and addressing disparities in health outcomes to create a more equitable future. Therefore, the Build Alternative (Preferred Alternative) would contribute to environmental effects that would cause substantial adverse effects on human beings.

3.2 WILDFIRE

3.2.1 Regulatory Setting

Senate Bill 1241 required the Office of Planning and Research, the Natural Resources Agency, and the California Department of Forestry and Fire Protection to develop amendments to the "CEQA Checklist" for the inclusion of questions related to fire hazard impacts for projects located on lands classified as very high fire hazard severity zones. The 2018 updates to the CEQA Guidelines expanded this to include projects "near" these very high fire hazard severity zones.

3.2.2 Affected Environment

Wildfires can directly burn facilities and indirectly cause damage when rain falls on denuded slopes that landslide after a fire. Effects would vary by location and may, in the most extreme cases, require that a facility be relocated or redesigned. Accordingly, Caltrans must consider these types of climate stressors in how highways are planned, designed, built, operated, and maintained.

The Project is in the City of Corona, the City of Lake Elsinore, and unincorporated portions of Riverside County. Land uses along the Project limits include commercial, industrial, and residential use.

CAL FIRE's FHSZ mapping tool shows that the Project limits run through moderate, high, and very high fire hazard severity zones (VHFHSZs), and portions are next to VHFHSZs. According to CAL FIRE, the Project is within the Riverside County SRA and the City of Corona and City of Lake Elsinore LRAs. Most of the alignment is in a VHFHSZ in both the SRA and LRAs. The SRA, which is within the unincorporated portion of Riverside County, is in areas classified as moderate, high, and VHFHSZs. Portions of the Project in the City of Corona and the City of Lake Elsinore are in areas classified as VHFHSZs in their respective LRAs. The Caltrans District 8 Climate Change Vulnerability Assessment mapping of roadways exposed to wildfire risk shows that I-15, within the Project limits, traverses areas that would have a medium, high, and very high wildfire concern from the years 2025 to 2085. See Figure 3-1 for the currently adopted FHSZs in SRAs for Western Riverside County.

3.2.3 Environmental Consequences

3.2.3.1 Build Alternative (Preferred Alternative)

Temporary Impacts

The Project would include construction of new lanes along I-15, reconfiguration of one off-ramp within the Project limits, and implementation of electronic toll collection equipment and signage. The Project components are similar in type and scale to existing equipment along the I-15 transportation corridor. No utility relocations are

proposed. All Project construction would follow State and federal fire regulations during implementation of electronic toll collection equipment. The Project limits traverse the City of Lake Elsinore, the City of Corona, and unincorporated Riverside County. Both cities and the County have Emergency Operations Plans, which provide guidelines for emergency response planning, preparation, training, and execution throughout their jurisdictions. The Project would not impair implementation or physically interfere with the implementation of an emergency response, from construction through long-term operations. The Project is not expected to cause a substantial increase in emergency response times during construction, especially with implementation of Standard Project Measure **TR-1**.

Implementation of standard Caltrans practices for erosion control and other best management practices (Avoidance and Minimization Measure **NC-12** and Caltrans Standard Specification 13-1.01D(2)) would avoid or minimize the Project's potential to result in downslope or downstream flooding or landslides. Therefore, the Project would not expose the public to a risk of post-fire slope instability or drainage changes.

Generally, transportation projects, particularly those on existing alignments, are considered unlikely to exacerbate wildfire risks or post-fire flooding/landslides. However, Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)** will ensure that the construction activities avoid or minimize the risk of fires. The Project will also comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a Fire Prevention Plan.

Permanent Impacts

The Project is not expected to introduce any new structures or operations that would worsen the risk of wildfire. The Project would not alter the alignment of I-15 and would not run directly through areas with open space and natural vegetation. Construction of the median into express lanes would also extend the firebreak between the east and west sides of I-15, which is a benefit of the Project. In addition, with implementation of additional lanes on I-15, the Project would have the potential to improve travel time and decrease emergency response times during operation. Operation of the Build Alternative (Preferred Alternative) would not exacerbate the current wildfire risks in the Project corridor.

3.2.3.2 No-Build Alternative

No improvements to I-15 are proposed under the No-Build Alternative other than routine maintenance. The No-Build Alternative does not introduce new elements to the highway that would exacerbate the current wildfire risks in the Project corridor.

3.2.3.3 Avoidance, Minimization, and/or Mitigation Measures

The Project will comply with Avoidance and Minimization Measure **NC-3 (NES BIO-1)**, as described in Section 2.4.1, *Natural Communities*, and the Caltrans Standard Specifications mentioned above. In addition, the following avoidance and minimization measure applies to wildfire:

FIRE-1 To minimize risk of fires during construction activities, RCTC's resident engineer or designated contractor will ensure the implementation of the following minimization measures:

- Coordinate with CAL FIRE and local fire departments to identify and maintain defensible spaces around active construction areas.
- Coordinate with CAL FIRE and local fire departments to identify and maintain firefighting equipment (e.g., extinguishers, shovels, water tankers) in active construction areas.
- Post emergency services phone numbers (i.e., fire, emergency medical, police) in visible locations in all active construction areas.

3.3 CLIMATE CHANGE

Please note: The National Environmental Policy Act (NEPA) Phase II regulations that required climate change to be analyzed have been rescinded pursuant to the Removal of NEPA Implementing Regulations CEQ Interim Rule (effective April 11, 2025). However, climate change was included in the NEPA section for the Draft Environmental Document prior to the rescission of the NEPA Phase II regulations. Therefore, it has been retained in the Final Environmental Document NEPA section for informational purposes only.

Climate change refers to long-term changes in temperature, precipitation, wind patterns, and other elements of the Earth's climate system. The Intergovernmental Panel on Climate Change, established by the United Nations and World Meteorological Organization in 1988, is devoted to greenhouse gas (GHG) emissions reduction and climate change research and policy. Climate change in the past has generally occurred gradually over millennia, or more suddenly in response to cataclysmic natural disruptions. The research of the Intergovernmental Panel on Climate Change and other scientists over recent decades, however, has unequivocally attributed an accelerated rate of climatological changes over the past 150 years to GHG emissions generated from the production and use of fossil fuels.

Human activities generate GHGs consisting primarily of carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), tetrafluoromethane, hexafluoroethane, sulfur hexafluoride (SF_6), and various hydrofluorocarbons (HFCs). CO_2 is the most abundant GHG; while it is a naturally occurring and necessary component of Earth's atmosphere, fossil-fuel combustion is the main source of additional, human-generated CO_2 that is the main driver of climate change. In the U.S. and in California, transportation is the largest source of GHG emissions, mostly CO_2.

The impacts of climate change are already being observed in the form of sea level rise, drought, extended and severe fire seasons, and historic flooding from changing storm patterns. The most important strategy to address climate change is to reduce GHG emissions. Additional strategies are necessary to mitigate and adapt to these impacts. In the context of climate change, "mitigation" involves actions to reduce GHG emissions to lessen adverse impacts that are likely to occur. "Adaptation" is planning for and responding to impacts to reduce vulnerability to harm, such as by adjusting transportation design standards to withstand more intense storms, heat, and higher sea levels. This analysis will include a discussion of both in the context of this transportation Project.

3.3.1 Regulatory Setting

For a full list of laws, regulations, and guidance related to climate change (GHGs and adaptation), please refer to Caltrans' Standard Environmental Reference (SER), Chapter 16, Climate Change.

3.3.1.1 Federal

To date, no nationwide numeric mobile-source GHG reduction targets have been established; however, federal agencies are mandated to consider the effects of climate change in their environmental reviews.

The National Environmental Policy Act (NEPA) (42 United States Code [USC] Part 4332) is the basic national charter for protection of the environment which establishes policy, sets goals, and provides direction for carrying out the policy. NEPA requires federal agencies to assess the environmental effects of their proposed actions prior to making a decision on the action or project. In May 2024, the White House Council on Environmental Quality (CEQ) issued the National Environmental Policy Act Implementing Regulations Revisions Phase 2 (89 Fed. Reg. 35442). The CEQ regulations do not establish numeric thresholds of significance, but mandate that federal agencies consider the effects of climate change in their environmental reviews, including direct, indirect, and cumulative impacts. The CEQ regulations further require that agencies quantify greenhouse gas emissions, where feasible, from the proposed action and alternatives. The regulations also direct agencies to identify reasonable alternatives that reduce climate change-related effects.

The Federal Highway Administration (FHWA) recognizes the threats that extreme weather, sea level rise, and other changes in environmental conditions pose to valuable transportation infrastructure and those who depend on it. FHWA therefore supports a sustainability approach that assesses vulnerability to climate risks and incorporates resilience into planning, asset management, project development and design, and operations and maintenance practices (FHWA 2022). This approach encourages planning for sustainable highways by addressing climate risks while balancing environmental, economic, and social values—“the triple bottom line of sustainability” (FHWA n.d.). Program and project elements that foster sustainability and resilience also support economic vitality and global efficiency, increase safety and mobility, enhance the environment, promote energy conservation, and improve the quality of life.

Early efforts by the federal government to improve fuel economy and energy efficiency to address climate change and its associated effects include The Energy Policy and Conservation Act of 1975 (42 USC Section 6201); and Corporate Average Fuel Economy (CAFE) Standards. The U.S. Department of Transportation’s National Highway Traffic and Safety Administration (NHTSA) sets and enforces corporate average fuel economy (CAFÉ) standards for on-road motor vehicles sold in the United States. The Environmental Protection Agency (U.S. EPA) calculates average fuel economy levels for manufacturers, and also sets related GHG emissions standards for vehicles under the Clean Air Act. Raising CAFE standards leads automakers to create a more fuel-efficient fleet, which improves our nation’s energy security, saves consumers money at the pump, and reduces GHG emissions (U.S. DOT 2014). These standards are periodically updated and published through the federal rulemaking process.

3.3.1.2 State

California has been innovative and proactive in addressing GHG emissions and climate change by passing multiple Senate and Assembly bills and executive orders (EOs).

In 2005, EO S-3-05 initially set a goal to reduce California's GHG emissions to 80 percent below year 1990 levels by 2050, with interim reduction targets. Later EOs and Assembly and Senate bills refined interim targets and codified the emissions reduction goals and strategies. The California Air Resources Board (ARB) was directed to create a climate change scoping plan and implement rules to achieve "real, quantifiable, cost-effective reductions of greenhouse gases." Ongoing GHG emissions reduction was also mandated in Health and Safety Code (H&SC) Section 38551(b). In 2022, the California Climate Crisis Act was passed, establishing state policy to reduce statewide human-caused GHG emissions by 85 percent below 1990 levels, achieve net zero GHG emissions by 2045, and achieve and maintain negative emissions thereafter.

Beyond GHG reduction, the State maintains a climate adaptation strategy to address the full range of climate change stressors, and passed legislation requiring state agencies to consider protection and management of natural and working lands as an important strategy in meeting the state's GHG reduction goals.

3.3.2 Environmental Setting

The Project is on the mainline segment of I-15 in southwestern Riverside County starting in the City of Lake Elsinore, continuing through the unincorporated Riverside County community of Temescal Valley, and into the City of Corona. The Project runs between PM 21.2 and PM 38.1 along I-15 and is surrounded by both urban and rural areas throughout the route. The Project area includes residential, commercial, industrial, and recreational land uses, along with undeveloped land. The route in the Project area is heavily used during peak travel hours. SCAG serves as the metropolitan planning organization and the Regional Transportation Planning Agency for the Project area. SCAG's Connect SoCal 2024–2050 RTP/SCS guides transportation development in the Project area. The Riverside County General Plan Air Quality Element and County of Riverside Climate Action Plan address GHGs in the Project area.

3.3.2.1 GHG Inventories

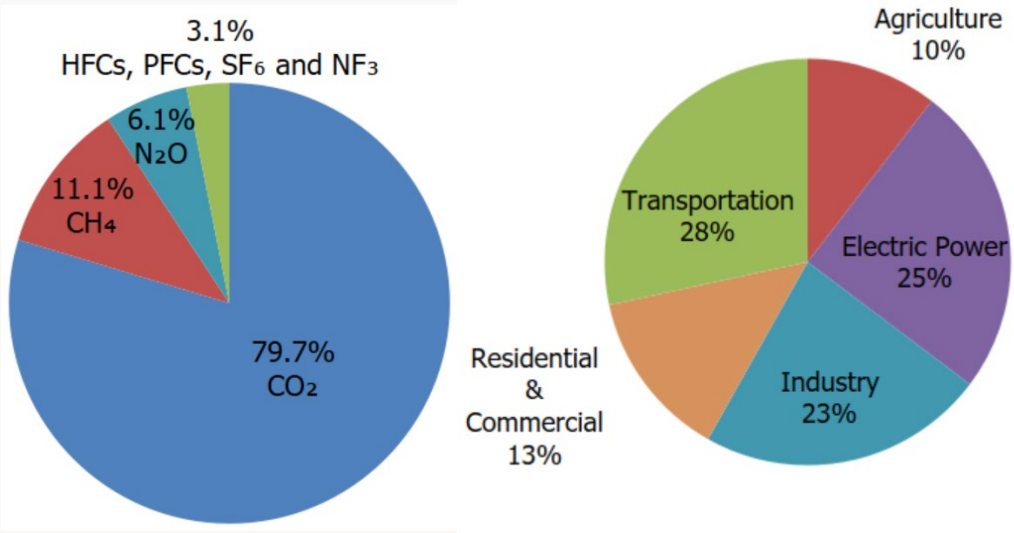
A GHG emissions inventory estimates the amount of GHGs discharged into the atmosphere by specific sources over a period of time. Tracking annual GHG emissions allows countries, states, and smaller jurisdictions to understand how emissions are changing and what actions may be needed to attain emission reduction goals. U.S. EPA is responsible for documenting GHG emissions nationwide, and the ARB does so for the state of California, as required by H&SC Section 39607.4. Cities and other local jurisdictions may also conduct local GHG inventories to inform their GHG reduction or climate action plans.

National GHG Inventory

The annual GHG inventory submitted by the U.S. EPA to the United Nations provides a comprehensive accounting of all human-produced sources of GHGs in the United States. Total national GHG emissions from all sectors in 2022 were 5,489.0 million metric tons (MMT), factoring in deductions for carbon sequestration in the land sector. (Land Use, Land Use Change, and Forestry provide a carbon sink equivalent to 15% of total U.S. emissions in 2022 [U.S. EPA 2024a].) While total GHG emissions in 2022 were 17% below 2005 levels, they increased by 1% over 2021 levels. Of these, 80% were CO_2, 11% were CH_4, and 6% were N_2O; the balance consisted of fluorinated gases. From 1990 to 2022, CO_2 emissions decreased by only 2% (U.S. EPA 2024a).

The transportation sector's share of total GHG emissions remained at 28% in 2022 and continues to be the largest contributing sector (Figure 3-2). Transportation activities accounted for 37% of U.S. CO_2 emissions from fossil fuel combustion in 2022. This is a decrease of 0.5% from 2021 (U.S. EPA 2024a, 2024b).

Figure 3-2. U.S. 2022 Greenhouse Gas Emissions

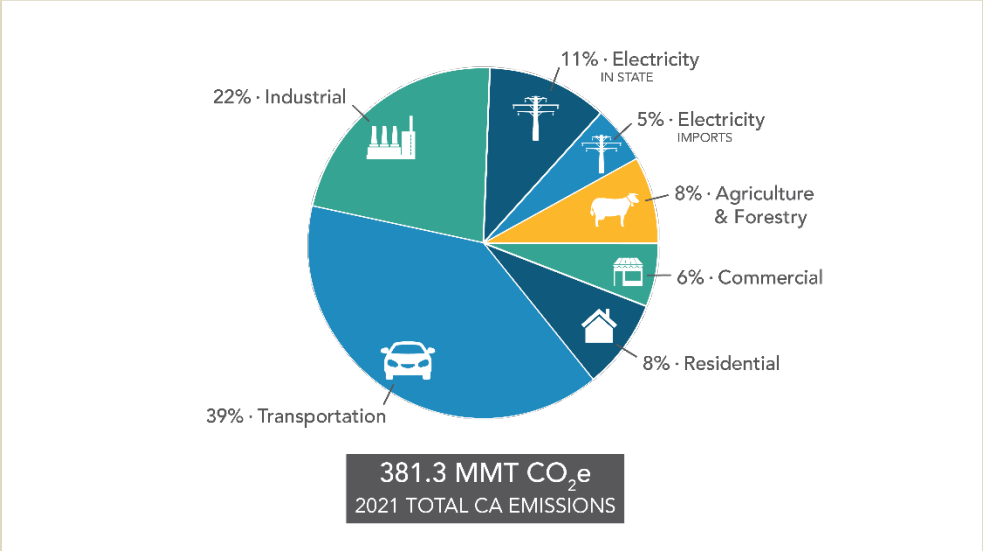


(Source: U.S. EPA 2024b)

State GHG Inventory

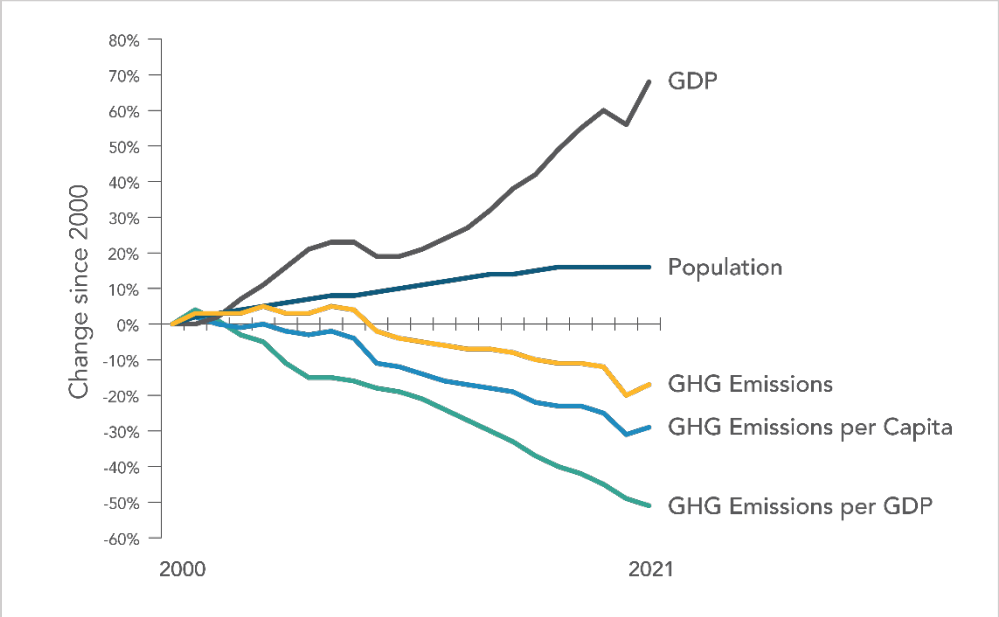
ARB collects GHG emissions data for transportation, electricity, commercial/residential, industrial, agricultural, and waste management sectors each year. It then summarizes and highlights major annual changes and trends to demonstrate the state's progress in meeting its GHG reduction goals. Overall statewide GHG emissions declined from 2000 to 2021 despite growth in population and state economic output (Figure 3-4). Transportation emissions remain the largest contributor to GHG emissions in the state (Figure 3-3) (ARB 2023).

Figure 3-3. California 2021 Greenhouse Gas Emissions by Economic Sector



(Source: ARB 2023)

Figure 3-4. Change in California GDP, Population, and GHG Emissions since 2000



(Source: ARB 2023)

AB 32 required ARB to develop a Scoping Plan that describes the approach California will take to achieve the goal of reducing GHG emissions to 1990 levels by 2020, and to update it every 5 years. The AB 32 Scoping Plan and the subsequent updates contain the main strategies California will use to reduce GHG emissions. ARB adopted the first scoping plan in 2008. The second updated plan, California's 2017 Climate Change Scoping Plan, adopted on December 14, 2017, reflects the 2030 target established in

EO B-30-15 and SB 32. The *2022 Scoping Plan for Achieving Carbon Neutrality,* adopted September 2022, assesses progress toward the statutory 2030 reduction goal and defines a path to reduce human-caused emissions to 85 percent below 1990 levels and achieve carbon neutrality no later than 2045, in accordance with AB 1279 (ARB 2022b).

3.3.2.2 Regional Plans

As required by *The Sustainable Communities and Climate Protection Act of 2008*, ARB sets regional GHG reduction targets for California's 18 metropolitan planning organizations (MPOs) to achieve through planning future projects that will cumulatively achieve those goals, and reporting how they will be met in the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). Targets are set at a percent reduction of passenger vehicle GHG emissions per person from 2005 levels. The Project is included in the RTP/SCS for SCAG's 2024–2050 RTP/SCS (SCAG 2024) under project number 3160001-RIV170901. The regional GHG reduction target for SCAG is 19 percent by 2035 (ARB 2021). (It should be noted that the SCAG planning region comprises Imperial, Orange, San Bernardino, and Ventura Counties in addition to Riverside County, and that targets apply in the region as a whole and to all GHG emission sources, not individual counties or transportation alone.) The *County of Riverside Climate Action Plan* (Riverside County Planning Department 2019) serves as a tool to implement the goals and policies of the various elements of the Riverside County General Plan related to GHG emissions. It provides a list of specific actions that will reduce countywide GHG emissions consistent with the reduction targets of AB 32 (Riverside County Planning Department 2019:Chapter 4). The regional plans and policies within the Project area are summarized in Table 3-4 below.

Table 3-4. Regional and Local Greenhouse Gas Reduction Plans

3.3.3 Project Analysis

GHG emissions from transportation projects can be divided into those produced during operation and use of the State Highway System (SHS) (operational emissions) and those produced during construction. The primary GHGs produced by the transportation sector are CO_2, CH_4, N_2O, and HFCs. CO_2 emissions are a product of burning gasoline or diesel fuel in internal combustion engines, along with relatively small amounts of CH_4 and N_2O. A small amount of HFC emissions related to refrigeration is also included in the transportation sector. (GHGs differ in how much heat each traps in the atmosphere, called global warming potential, or GWP. CO_2 is the most important GHG, so amounts of other gases are expressed relative to CO_2, using a metric called “carbon dioxide equivalent,” or CO_2e. The global warming potential of CO_2 is assigned a value of 1, and the GWP of other gases is assessed as multiples of CO_2.)

The CEQA Guidelines generally address greenhouse gas emissions as a cumulative impact due to the global nature of climate change (Pub. Resources Code, § 21083(b)(2)). As the California Supreme Court explained, “because of the global scale of climate change, any one project's contribution is unlikely to be significant by itself.” (Cleveland National Forest Foundation v. San Diego Assn. of Governments (2017) 3 Cal.5th 497, 512.) In assessing cumulative impacts, it must be determined if a project’s incremental effect is “cumulatively considerable” (CEQA Guidelines Sections 15064(h)(1) and 15130).

To make this determination, the incremental impacts of the Project must be compared with the effects of past, current, and probable future projects. Although climate change is ultimately a cumulative impact, not every individual project that emits greenhouse gases must necessarily be found to contribute to a significant cumulative impact on the environment.

3.3.3.1 Operational Emissions

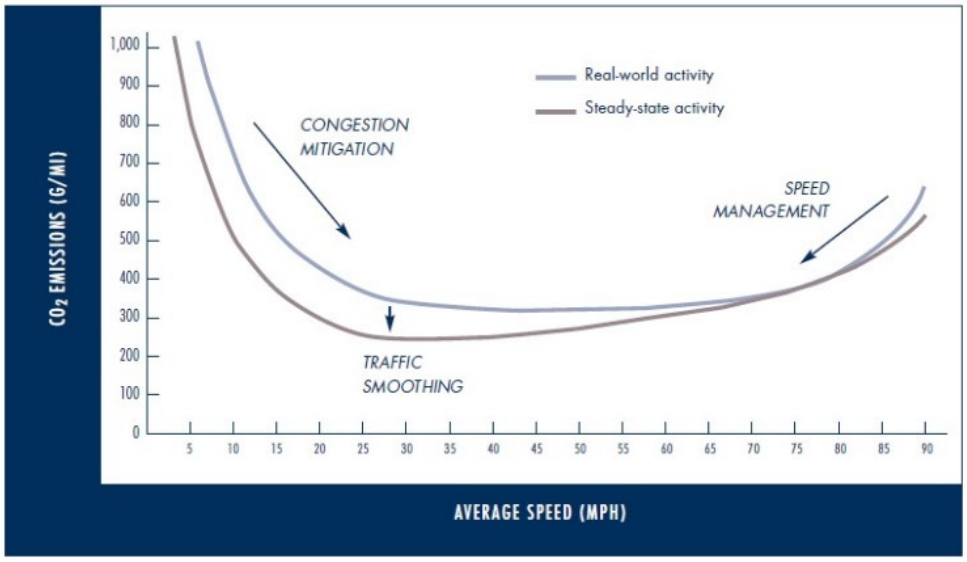
The National GHG Inventory for 2022 reported that 80 percent of all U.S. GHG emissions in 2022 consisted of CO_2, and fossil fuel combustion for transportation accounted for 35 percent of those CO_2 emissions. Most (37 percent) transportation-

related CO_2 was from operating light-duty trucks, 23 percent from medium- and heavy-duty trucks and buses, and 20 percent from passenger cars. The remainder of emissions came from other modes and off-road sources (U.S. EPA 2024a). Because CO_2 emissions represent the greatest percentage of GHG emissions, it has been selected as a proxy for the following analysis for potential climate change impacts.

The highest levels of CO_2 from mobile sources such as automobiles occur at stop-and-go speeds (0–25 miles per hour) and speeds over 55 miles per hour; the most severe emissions occur from 0–25 miles per hour (see Figure 3-5). To the extent that a project enhances operational efficiency and improves travel times in high-congestion travel corridors, GHG emissions, particularly CO_2, may be reduced, provided that improved travel times and throughput (traffic flow) do not induce additional VMT.

Four primary strategies can reduce GHG emissions from transportation sources: (1) improving the transportation system and operational efficiencies, (2) reducing travel activity, (3) transitioning to lower GHG emitting fuels, and (4) improving vehicle technologies and efficiency. To be most effective, all four strategies should be pursued concurrently.

Figure 3-5. Possible Use of Traffic Operation Strategies in Reducing On-road CO_2 Emissions



(Source: Barth and Boriboonsomsin 2010)

The Project is listed in the SCAG 2024–2050 RTP/SCS under project number 3160001-RIV170901. The 2024–2050 RTP was approved by FHWA on May 10, 2024. Implementation of the 2024–2050 RTP/SCS would result in a 19-percent reduction of GHG emissions per capita by 2035. This would meet or exceed the State's mandated reductions for the SCAG region, which is 19 percent per capita by 2035.

The purpose of the Project is to manage traffic operations, throughput (traffic flow), and travel times on the northbound and southbound mainline; provide an option for travel time reliability; and increase vehicular throughput (traffic flow) within the Project limits with forecasted population growth. Existing traffic volumes often exceed current highway capacity along several segments of I-15 within the Project area. Due to forecasted population growth and continued development to support the projected growth in the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. Constructing new lanes, adding auxiliary lanes, and widening bridges are expected to provide more vehicle storage space to accommodate the projected traffic volumes. Auxiliary lanes would provide an opportunity for drivers to find gaps in the traffic flow before merging onto freeway lanes—and without causing unnecessary delay. The Project specifically involves the Transportation System Management strategy of constructing auxiliary lanes to increase throughput (traffic flow) by improving the operational capacity and efficiency of I-15.

One additional alternative was considered as part of the Project Approval/Environmental Document development and design of the Build Alternative (Preferred Alternative), which included adding a high-occupancy vehicle (HOV) lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, the alternative was rejected due to the projected future traffic volumes within the I-15 corridor increasing so much that the addition of a single HOV lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. The cost for the HOV alternative was estimated to be approximately $330 million. Because the HOV alternative did not meet the Project's purpose and need and was not financially feasible, the HOV alternative was dropped from further consideration.

3.3.3.2 Quantitative Analysis

Table 3-5. Modeled Annual CO_2e Emissions and Vehicle Miles Traveled, by Alternative

Alternative	Modeled CO_2e Emissions (metric tons /year)	Difference Build vs. No Build (metric tons/year)	Change from Existing/Baseline + or - (metric tons/year)	Annual Vehicle Miles Traveled[a]
Existing/ Baseline 2019	1,414,268	–	–	3,319,554,680
Opening Year (2030)				
No Build	1,779,215	–	364,947	5,221,621,300
Build Alternative (Preferred Alternative)	1,828,332	49,117	414,064	5,377,597,800
Design Year (2050)				
No Build	1,596,525	–	182,257	5,430,206,470
Build Alternative (Preferred Alternative)	1,627,345	30,820	213,077	5,556,004,380

Source: CT EMFAC (2021)
CO_2 = carbon dioxide
CO_2e = CO_2, N_2O, CH_4 [provide all GHGs included in the model's calculation of CO_2e]
[a] Annual vehicle miles traveled (VMT) values derived from Daily VMT values multiplied by 347, per ARB methodology (ARB 2008:I-19).

Operational emissions were modeled using the CT-EMFAC2021 model. Project-specific VMT distribution by speed provided in the approved *Interstate 15 Express Lanes Project – Southern Extension Traffic Operations Analysis Report* (Caltrans 2022c) prepared for Caltrans and Riverside County Transportation Commission was used for each condition. Truck percentage data provided in the Traffic Operations Analysis Report (Caltrans 2022c) were used for the VMT fraction for trucks and non-trucks. Table 3-5 summarizes the results of the modeling, showing that all the future No-Build and Build condition emissions would be higher than under the existing condition. When compared to the Existing (2019) baseline, in both the Opening Year (2030) and Design Year (2050), the No-Build and Build Alternatives (Preferred Alternative) would result in an increase in emissions. When compared to the No-Build conditions, the Build Alternative (Preferred Alternative) would result in an increase in emissions in the Opening Year (2030) and Design Year (2050). The Project would improve speed distribution and reduce vehicle delays.

ARB developed the EMission FACtors (EMFAC) model to facilitate preparation of statewide and regional mobile source emissions inventories. The model generates emissions rates that can be multiplied by vehicle activity data from all motor vehicles, from passenger cars to heavy-duty trucks, operating on highways, freeways, and local roads in California. EMFAC has a rigorous scientific foundation, has been approved by U.S. EPA, and has been vetted through multiple stakeholder reviews. Caltrans developed CT-EMFAC to apply project-specific factors to ARB's model.

EMFAC's GHG emission rates are based on tailpipe emissions test data and the model does not account for factors such as the rate of acceleration and vehicle aerodynamics, which influence the amount of emissions generated by a vehicle. GHG emissions quantified using CT-EMFAC are therefore estimates and may not reflect actual on-road emissions. The model does not, however, account for induced travel. Modeling GHG estimates with EMFAC or CT-EMFAC nevertheless remains the most precise means of estimating future greenhouse gas emissions. While CT-EMFAC is currently the best available tool for calculating GHG emissions from mobile sources, it is important to note that the GHG results are only useful for a comparison of alternatives.

3.3.3.3 Construction Emissions

Construction GHG emissions would result from material processing and transportation, on-site construction equipment, and traffic delays due to construction. These emissions will be produced at different levels throughout the construction phase; their frequency and occurrence can be reduced through innovations in plans and specifications and by implementing better traffic management during construction phases. While construction GHG emissions are only produced for a short time, they have long-term effects in the atmosphere, so cannot be considered "temporary" in the same way as criteria pollutants that subside after construction is completed.

Use of long-life pavement, improved traffic management plans, and changes in materials can also help offset GHG emissions produced during construction by allowing longer intervals between maintenance and rehabilitation activities.

Construction emissions were estimated using the latest Sacramento Metropolitan Air Quality Management District's RCEM, Version 9.0. Construction of the Project is expected to last approximately 36 months.

Overall total Project construction GHG emissions are estimated to be approximately 5,444 metric tons CO_2e over the approximately 36-month construction period.

All construction contracts include Caltrans Standard Specifications related to air quality. Sections 7-1.02A and 7-1.02C, Emissions Reduction, require contractors to comply with all laws applicable to the Project and to certify they are aware of and will comply with all ARB emission reduction regulations. Section 14-9.02, Air Pollution Control, requires contractors to comply with all air pollution control rules, regulations, ordinances, and statutes. Certain common regulations, such as equipment idling restrictions, that reduce construction vehicle emissions also help reduce GHG emissions.

Mitigation Measures **GHG-1** through **GHG-4**, **GHG-11**, and **AQ-5**, as well as Standard Project Measures **EN-1** and **AQ-4**, are expected to reduce construction GHG emissions from the Project. These measures would reduce construction GHG emissions by ensuring that construction equipment is in proper tune and working condition, that energy-efficient equipment and lighting are used, and that construction materials are properly reused or recycled.

3.3.3.4 CEQA Conclusion

The Project would increase travel speeds and reduce vehicle delays, but operational GHG emissions under the Build Alternative (Preferred Alternative) are projected to increase in the Design Year (2050) compared to existing conditions. This impact is considered significant under CEQA.

Because operational emissions would increase, the Project would conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

Caltrans is firmly committed to implementing measures to help reduce GHG emissions. These measures are outlined in the following section.

3.3.4 Greenhouse Gas Reduction Strategies

3.3.4.1 Statewide Efforts

In response to Assembly Bill 32, the Global Warming Solutions Act, California is implementing measures to achieve emission reductions of GHGs that cause climate change. Climate change programs in California are effectively reducing GHG emissions from all sectors of the economy. These programs include regulations, market programs, and incentives that will transform transportation, industry, fuels, and other sectors to take California into a sustainable, cleaner, low-carbon future, while maintaining a robust economy (ARB 2022c).

Major sectors of the California economy, including transportation, will need to reduce emissions to meet 2030 and 2050 GHG emissions targets. The Governor's Office of Planning and Research identified five sustainability pillars in a 2015 report: (1) Increasing the share of renewable energy in the State's energy mix to at least 50 percent by 2030; (2) Reducing petroleum use by up to 50 percent by 2030; (3) Increasing the energy efficiency of existing buildings by 50 percent by 2030; (4) Reducing emissions of short-lived climate pollutants; and (5) Stewarding natural resources, including forests, working lands, and wetlands, to ensure that they store carbon, are resilient, and enhance other environmental benefits (OPR 2015).

The transportation sector is integral to the people and economy of California. To achieve GHG emission reduction goals, it is vital that the state build on past successes in reducing criteria and toxic air pollutants from transportation and goods movement. GHG emission reductions will come from cleaner vehicle technologies, lower-carbon

fuels, and reduction of VMT. Reducing today's petroleum use in cars and trucks is a key state goal for reducing greenhouse gas emissions by 2030 (California Environmental Protection Agency 2015).

In addition, SB 1386 (Wolk 2016) established as state policy the protection and management of natural and working lands and requires state agencies to consider that policy in their own decision making. Trees and vegetation on forests, rangelands, farms, and wetlands remove carbon dioxide from the atmosphere through biological processes and sequester the carbon in above- and below-ground matter.

Subsequently, Governor Gavin Newsom issued Executive Order N-82-20 to combat the crises in climate change and biodiversity. It instructs state agencies to use existing authorities and resources to identify and implement near- and long-term actions to accelerate natural removal of carbon and build climate resilience in our forests, wetlands, urban greenspaces, agricultural soils, and land conservation activities in ways that serve all communities and in particular low-income, disadvantaged, and vulnerable communities. To support this order, the California Natural Resources Agency released *Natural and Working Lands Climate Smart Strategy* (California Natural Resources Agency 2022).

3.3.4.2 Caltrans Activities

Caltrans continues to be involved on the Governor's Climate Action Team as the ARB works to implement EOs S-3-05 and S-01-07 and help achieve the targets set forth in AB 32. EO B-30-15, issued in April 2015, and SB 32 (2016), set an interim target to cut GHG emissions to 40 percent below 1990 levels by 2030. The following major initiatives are underway at Caltrans to help meet these targets.

Climate Action Plan for Transportation Infrastructure

The California Action Plan for Transportation Infrastructure (CAPTI) builds on executive orders signed by Governor Newsom in 2019 and 2020 targeted at reducing GHG emissions in transportation, which account for more than 40 percent of all polluting emissions, to reach the state's climate goals. Under CAPTI, where feasible and within existing funding program structures, the state will invest discretionary transportation funds in sustainable infrastructure projects that align with its climate, health, and social equity goals (California State Transportation Agency 2021).

California Transportation Plan

The California Transportation Plan (CTP) is a statewide, long-range transportation plan to meet our future mobility needs and reduce GHG emissions. It serves as an umbrella document for all the other statewide transportation planning documents. The CTP 2050 presents a vision of a safe, resilient, and universally accessible transportation system that supports vibrant communities, advances racial and economic justice, and improves public and environmental health. The plan's climate goal is to achieve statewide GHG emissions reduction targets and increase resilience to climate change. It demonstrates how GHG emissions from the transportation sector can be reduced through

advancements in clean fuel technologies; continued shifts toward active travel, transit, and shared mobility; more efficient land use and development practices; and continued shifts to telework (Caltrans 2021c).

Caltrans Strategic Plan

The Caltrans 2024–2028 Strategic Plan outlines goals centered on safety, climate action, and stewardship. Climate-related strategies include implementing the Caltrans Climate Action Plan; expanding climate education, training, and outreach; strengthening partnerships to support climate resilience; promoting sustainable transportation solutions that reduce emissions; and continuing to engage underserved and disproportionately impacted communities in climate planning and implementation (Caltrans 2024d).

Caltrans Policy Directives and Other Initiatives

Caltrans Director's Policy 30 (DP-30) Climate Change (June 22, 2012) established a policy to ensure coordinated efforts to incorporate climate change into Caltrans decisions and activities. Other Director's policies promote energy efficiency, conservation, and climate change, and commit Caltrans to sustainability practices in all planning, maintenance, and operations. *Caltrans Greenhouse Gas Emissions and Mitigation Report* (Caltrans 2020c) provides a comprehensive overview of Caltrans' emissions and current Caltrans procedures and activities that track and reduce GHG emissions. It identifies additional opportunities for further reducing GHG emissions from Department-controlled emission sources, in support of Caltrans and State goals.

3.3.4.3 Project-Level GHG Reduction Strategies

The following Mitigation Measures will also be implemented in the Project to reduce GHG emissions from the Project.

GHG-1. The contractor must comply with SCAQMD's rules, ordinances, and regulations regarding air quality restrictions.

GHG-2. The Project will incorporate the use of energy-efficient lighting.

GHG-3. Bids will be solicited that include use of energy and fuel-efficient fleets in accordance with current practices.

GHG-4. The Project will maintain equipment in proper tune and working condition.

GHG-5. Use water-efficient technologies for landscaping.

GHG-6. Select Project features that minimize the need for irrigation and nonnative plants.

GHG-7. Install urban planting/vegetation, especially canopy trees, to reduce "heat island" effects.

GHG-8. Incorporate native plants and vegetation to the Project design. Replace more vegetation than was removed to increase carbon sequestration.

GHG-9. Avoid an ultimate (new trees at projected maturity) net loss of tree canopy within the Project limits through a combination of preservation and new planting.

GHG-10. Include landscaping components such as mulch and compost application to improve carbon sequestration rates in soils and reduce organic waste.

GHG-11. During final design, a Life Cycle Cost Analysis (LCCA) will be performed, which will ensure long-life pavement structures will be designed to withstand the projected increase in ambient temperatures and changes in precipitation in the Project area as much as feasible. Specifically, adjustments will be made to the pavement binder and mix design specifications to better match expected future environmental conditions. Additionally, stiffer asphalt grades and slower-aging binders will be utilized as needed to address increased temperatures and projected temperature change, along with adjustments to the pavement structural design to account for temperature and climatic changes. Incorporation of design elements, like shorter joint spacing and others, will occur to reduce damage from high temperatures. Concrete pavements will be designed to limit moisture damage and shrinkage as much as feasible.

AQ-5. To offset construction emissions from the Project, promote travel-mode shift, and reduce bus travel times, RCTC will develop a program prior to Express Lanes being open to travel that includes the establishment of the Riverside County Free Rail Pass Program and the expansion of Riverside Transit Agency's (RTA's) CommuterLink Route [5]206.

The Riverside County Free Rail Pass Program is a 2-year program [6]that launched in March 2025 and offers temporary free Metrolink passes to Riverside County residents to reduce the cost of using public transportation in order to encourage residents to use public transportation more often on a permanent basis. This program includes public outreach efforts that maximize the participation of disadvantaged and low-income populations to encourage transit use. If additional funding becomes available, RCTC will extend this program beyond the current funding of 2-year period.

RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona. At a minimum, RTA buses will be permitted to utilize

[5] https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express

[6] https://www.rctc.org/ride-train-free-experience-metrolink-program/

the Express Lanes at no cost within the Project limits upon the opening of the Project.

AQ-6. RCTC provides vanpool subsidies through a component of the VanClub program (vanclub.net[7]). Currently, these vanpool subsidies cease in 2029. For this Project, RCTC will fund and administer the vanpool subsidies with $15 million for an additional 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

To further support vanpool adoption in Riverside County, RCTC Commuter Assistance will implement an Incremental Vanpool Subsidy Program. This initiative would supplement existing subsidies provided by the Los Angeles County Metropolitan Transportation Authority, Orange County Transit Authority, San Diego Association of Governments, and San Bernardino County Transportation Authority, further reducing costs for Riverside County residents.

AQ-7. RCTC will provide $12 million dollars to administer the IE Commuter,[8] a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents. To deliver the program, RCTC will manage contracts for administration, outreach, and technical services.

AQ-8. To accommodate growing commuter demand and support mode shift in the Inland Empire, RCTC Commuter Assistance aims to extend existing park and ride leases beyond their current expiration in 2029 and expand the network by approximately 94 additional spaces to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley.[9]

RCTC will oversee this effort, which is established by three-party lease agreements between property owners, Caltrans, and RCTC. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000.

Standard Project Measures **EN-1** and **AQ-4** will be implemented during construction activities to minimize and/or avoid impacts related to GHG emissions.

EN-1. The contractor will adhere to Caltrans Standard Specifications for Solid Waste Disposal and Recycling (Section 14-10) and Disposal Documentation (Section 14-11.13B(6)).

[7] https://www.vanclub.net/rp2/home/faq

[8] https://www.rctc.org/5day-incentive/

[9] The number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation.

AQ-4. The contractor will adhere to Caltrans Standard Specifications for Construction (Section 14-9.02) that specifically require compliance by the contractor with all applicable laws and regulations related to air quality, including air pollution control district and air quality management district regulations and local ordinances.

3.3.5 Adaptation

Reducing GHG emissions is only one part of an approach to addressing climate change. Caltrans must plan for the effects of climate change on the state's transportation infrastructure and strengthen or protect the facilities from damage. Climate change is expected to produce increased variability in precipitation, rising temperatures, rising sea levels, variability in storm surges and their intensity, and in the frequency and intensity of wildfires. Flooding and erosion can damage or wash out roads; longer periods of intense heat can buckle pavement and railroad tracks; storm surges combined with a rising sea level can inundate highways. Wildfire can directly burn facilities and indirectly cause damage when rain falls on denuded slopes that landslide after a fire. Effects will vary by location and may, in the most extreme cases, require that a facility be relocated or redesigned. Furthermore, the combined effects of transportation projects and climate stressors can exacerbate the impacts of both on vulnerable communities in a project area. Accordingly, Caltrans must consider these types of climate stressors in how highways are planned, designed, built, operated, and maintained.

3.3.5.1 Federal Efforts

Under NEPA Assignment, Caltrans is obligated to comply with all applicable federal environmental laws and FHWA NEPA regulations, policies, and guidance.

The *Fifth National Climate Assessment*, published in 2023, presents the most recent science and "analyzes the effects of global change on the natural environment, agriculture, energy production and use, land and water resources, transportation, human health and welfare, human social systems, and biological diversity; [It] analyzes current trends in global change, both human-induced and natural, and projects major trends for the subsequent 25 to 100 years … to support informed decision-making across the United States." Building on previous assessments, it continues to advance "an inclusive, diverse, and sustained process for assessing and communicating scientific knowledge on the impacts, risks, and vulnerabilities associated with a changing global climate" (U.S. Global Change Research Program 2023).

The U.S. Department of Transportation recognizes the transportation sector's major contribution of GHGs that cause climate change and has made climate action one of the department's top priorities (U.S. DOT 2023). FHWA's policy is to strive to identify the risks of climate change and extreme weather events to current and planned transportation systems. FHWA has developed guidance and tools for transportation planning that fosters resilience to climate effects and sustainability at the federal, state, and local levels (FHWA 2022).

The National Oceanic and Atmospheric Administration provides sea level rise projections for all U.S. coastal waters to help communities and decision makers assess their risk from sea level rise. Updated projections through 2150 were released in 2022 in a report and online tool (NOAA 2022).

3.3.5.2 State Efforts

Climate change adaptation for transportation infrastructure involves long-term planning and risk management to address vulnerabilities in the transportation system. A number of state policies and tools have been developed to guide adaptation efforts.

California's Fourth Climate Change Assessment (Fourth Assessment) (2018) provides information to help decision makers across sectors and at state, regional, and local scales protect and build the resilience of the state's people, infrastructure, natural systems, working lands, and waters. The Fourth Assessment reported that if no measures are taken to reduce GHG emissions by 2021 or sooner, the state is projected to experience an up to 8.8 degrees Fahrenheit increase in average annual maximum daily temperatures; a two-thirds decline in water supply from snowpack resulting in water shortages; a 77% increase in average area burned by wildfire; and large-scale erosion of up to 67% of Southern California beaches due to sea level rise. These effects will have profound impacts on infrastructure, agriculture, energy demand, natural systems, communities, and public health (State of California 2018).

Sea level rise is a particular concern for transportation infrastructure in the coastal zone. Major urban airports will be at risk of flooding from sea level rise combined with storm surge as early as 2040; San Francisco airport is already at risk. Miles of coastal highways vulnerable to flooding in a 100-year storm event will triple to 370 by 2100, and 3,750 miles will be exposed to temporary flooding. The Fourth Assessment's findings highlight the need for proactive action to address these current and future impacts of climate change.

To help actors throughout the state address the findings of California's Fourth Climate Change Assessment, AB 2800's multidisciplinary Climate-Safe Infrastructure Working Group published *Paying it Forward: The Path Toward Climate-Safe Infrastructure in California*. This report provides guidance on assessing risk in the face of inherent uncertainties still posed by the best available climate change science. It also examines how state agencies can use infrastructure planning, design, and implementation processes to respond to the observed and anticipated climate change impacts (Climate-Safe Infrastructure Working Group 2018).

EO S-13-08, issued in 2008, directed state agencies to consider sea level rise scenarios for 2050 and 2100 during planning to assess project vulnerabilities, reduce risks, and increase resilience to sea level rise. It gave rise to the 2009 *California Climate Adaptation Strategy*, the Safeguarding California Plan, and a series of technical reports on statewide sea level rise projections and risks, including the *State of California Sea-Level Rise Guidance Update* in 2018. The reports addressed the full range of climate change impacts and recommended adaptation strategies. The current *California*

Climate Adaptation Strategy incorporates key elements of the latest sector-specific plans such as the *Natural and Working Lands Climate Smart Strategy*, *Wildfire and Forest Resilience Action Plan*, *Water Resilience Portfolio,* and the CAPTI (described above). Priorities in the 2023 *California Climate Adaptation Strategy* include acting in partnership with California Native American Tribes, strengthening protections for climate-vulnerable communities that lack capacity and resources, implementing nature-based climate solutions, using best available climate science, and partnering and collaboration to best leverage resources (California Natural Resources Agency 2023).

EO B-30-15 recognizes that effects of climate change threaten California's infrastructure and requires state agencies to factor climate change into all planning and investment decisions. Under this EO, the Office of Planning and Research published *Planning and Investing for a Resilient California: A Guidebook for State Agencies*, to encourage a uniform and systematic approach to building resilience.

SB 1 Coastal Resources: Sea Level Rise (Atkins 2021) established statewide goals to "anticipate, assess, plan for, and, to the extent feasible, avoid, minimize, and mitigate the adverse environmental and economic effects of sea level rise within the coastal zone." As the legislation directed, the Ocean Protection Council collaborated with 17 state planning and coastal management agencies to develop the *State Agency Sea-Level Rise Action Plan for California* in February 2022. This plan promotes coordinated actions by state agencies to enhance California's resilience to the impacts of sea level rise (California Ocean Protection Council 2022).

3.3.5.3 Caltrans Adaptation Efforts

Caltrans Vulnerability Assessments

Caltrans completed climate change vulnerability assessments to identify segments of the State Highway System vulnerable to climate change effects of precipitation, temperature, wildfire, storm surge, and sea level rise.

The climate change data in the assessments were developed in coordination with climate change scientists and experts at federal, state, and regional organizations at the forefront of climate science. The findings of the vulnerability assessments guide analysis of at-risk assets and development of Adaptation Priority Reports as a method to make capital programming decisions to address identified risks.

Caltrans Sustainability Programs

The Director's Office of Equity, Sustainability and Tribal Affairs supports implementation of sustainable practices at Caltrans. The *Sustainability Roadmap* is a periodic progress report and plan for meeting the Governor's sustainability goals related to EOs B-16-12, B-18-12, and B-30-15. The Roadmap includes designing new buildings for climate change resilience and zero-net energy, and replacing fleet vehicles with zero-emission vehicles (Caltrans 2023j).

3.3.5.4 Project Adaptation Analysis

Sea Level Rise

The Project is outside the coastal zone and not in an area subject to sea level rise. Accordingly, direct impacts on transportation facilities due to projected sea level rise are not expected.

Precipitation and Flooding

Based on the FEMA Flood Insurance Rate Map (Map Numbers 06065C1370G, 06059C0225J, 06065C2006G, 06065C2026G, 06065C2028G, 06065C2029G, and 06065C2037G), the Project is primarily within Zone X (Area of Minimal Flood Hazard). A portion of the Project is in Zone A, Zone AO, and Zone AE near Lake Elsinore, which are areas designated as being within the 1-percent annual chance flood (i.e., 100-year flood) zone. Zone AE runs along portions of the Project area from Lake Elsinore to portions of unincorporated Riverside County. The Caltrans District 8 Climate Change Vulnerability Assessment maps projected changes in 100-year storm precipitation, a metric used in highway design, under the business-as-usual climate change scenario. The change in the 100-year precipitation depth in the Project area is expected to be an increase of up to 5.3 percent by 2055, but only up to 4.5 percent by 2085 (Caltrans 2019). This indicates heavier rainfall during storm events. Drainage facilities would be modified as needed to accommodate additional runoff from the auxiliary lanes and express lanes. It is expected that the Project would be adapted to the anticipated changes in storm precipitation under climate change.

Wildfire

Based on the CAL FIRE FHSZ Map for the County of Riverside, portions of the Project alignment fall within FHSZs identified as moderate, high, and very high in an SRA. Most of the alignment is in a VHFHSZ in both the SRA and LRAs. The Caltrans District 8 Climate Change Vulnerability Assessment mapping of wildfire risk shows a portion of the Project area as exposed roadway in an area of moderate wildfire concern through 2085.

Portions of the Project fall within FHSZs identified as moderate, high, and very high. The Project improvements would include adaptation strategies such as fire-resistant landscaping and hardening to address increased wildfire risk in the area. Fire-resistant landscaping would be implemented, as it may prevent fire ignition and slow or stop the spread of an existing wildfire. In addition, according to Caltrans' Climate Adaptation Strategies for Transportation Infrastructure (2023a), hardening refers to the use of ember- and heat-resistant materials that may assist in preventing ignition and damage to the transportation infrastructure. The Project would incorporate hardening materials such as guardrail and signposts, which would include replacement of wooden guardrail posts and signposts with metal or other inert materials that are less likely to be affected by wildfire. Guardrail posts and signposts made from inert materials are more resistant to wildfire conditions and can be expected to maintain intended function both during and after wildfires take place. Therefore, the Project would be adapted and resilient to future wildfire. Furthermore, the Project would adhere to Caltrans Standard Specification

Section 7-1.02M(2), which mandates fire prevention procedures, including a fire prevention plan, to avoid accidental fire starts during construction, and the Project would implement Avoidance and Minimization Measure **NC-3**.

Avoidance and Minimization Measure **FIRE-1** will ensure that the construction activities avoid or minimize the risk of fires.

Temperature

The Caltrans District 8 Climate Change Vulnerability Assessment Map (Caltrans 2019) indicates temperature changes during the Project's design life. Based on the Caltrans District 8 Climate Change Vulnerability Assessment Map (Caltrans 2019), the average minimum air temperature in the Project area is projected to increase by up to 2.5 degrees Fahrenheit (°F) by 2025, by up to 5.6 °F by 2055, and by up to 8.1 °F by 2085. The average maximum temperature over 7 consecutive days in the Project area is projected to increase by up to 3.5 °F by 2025, by up to 6.8 °F by 2055, and by up to 10.5 °F by 2085. Therefore, the overall minimum and maximum daily temperatures in the Project area are projected to continue to increase from 2022 to 2085.

Temperature can affect pavement performance, and changes in temperature can cause blowups, buckling, and rutting, affecting the pavement's roadway life. Pavements are designed based on the typical historical climatic conditions for the Project area. However, as weather changes occur due to climate change, historic climatic conditions may no longer be as indicative for future environmental conditions. To reduce future pavement damage and improve performance, Mitigation Measure **GHG-11** would be implemented. This measure would ensure that pavements are designed and installed to account for future temperature increases and climatic changes.

Temperature affects the choice of pavement materials, the design of foundations and retaining walls in terms of ground moisture conditions, and the need for expansion/ contraction of bridge joints. The changes in temperature in the Project area help determine the selection of the pavement binder grade and material. A binder would be selected that can maintain pavement integrity under both extreme cold and heat conditions. Based on the projected temperature increase in the Project area, the binder will need to allow the pavement to maintain integrity under high temperatures. The temperature increase would also be considered when determining the expansion and contraction allowances for bridge joints. Higher average temperatures can affect flexible pavement; increased maximum pavement temperatures increase the potential for rutting and shoving, requiring more rut-resistant asphalt mixtures. This may require raising high-temperature-asphalt binder grades, increasing the use of binder polymerization, or improving the aggregate structure in asphalt mixtures. Higher average temperatures can also increase the age hardening of the asphalt binder in flexible pavements. To mitigate this, binders that will age more slowly may be used or projects may expand the use of asphalt pavement-preservation techniques to reduce binder aging. During extreme heat waves, there is also an increased potential for asphalt rutting and shoving to flexible pavement. To mitigate this, the mitigation strategies listed earlier would be used, while considering that the historical basis for selecting binder grades may no longer be valid. Higher average temperatures can also

affect rigid pavement, as higher temperatures increase the potential for concrete temperature-related curling and moisture warping. To address this, projects will need to factor in more consideration for the concrete coefficient of thermal expansion and drying shrinkage. Projects may need to incorporate design elements to reduce damage from thermal effects, such as through using shorter joint spacing, thicker slabs, less rigid support, and enhanced load transfer. Additionally, higher extreme maximum temperatures, such as during a heat wave, will increase the risk of concrete pavement blowups on rigid pavement, due to excessive slab expansion. To mitigate this, pavement design would use shorter joint spacing in the new design and keep joints clean. In extreme cases, projects would install expansion joints in existing pavements.

Based on the projected temperature increase, the Project will likely have to assess ground conditions, as less water can alter the design factors for foundations and retaining walls. The Project is in the Inland Valley Caltrans pavement region. If extreme high temperatures are also accompanied by drought, there is increased potential for subgrade shrinkage, which would be considered for the pavement design. Any landscaping and vegetation will need to withstand higher temperatures. Additionally, extreme temperatures could cause pavement discontinuities and deformations, which could lead to more frequent maintenance. As there is a substantial projected temperature increase in the Project area, worker safety will be affected if employees spend extended time outside in high temperatures, such as during maintenance work. In order to ensure worker safety in higher extreme temperatures, more work may be required to be conducted at night, affecting construction and maintenance scheduling.

3.3.5.5 Project-Level Climate Change Adaptation and Mitigation Strategies

The following adaptation Mitigation Measure will be implemented to reduce the effects of climate change on the Project:

GHG-11. During final design, a Life Cycle Cost Analysis (LCCA) will be performed, which will ensure long-life pavement structures will be designed to withstand the projected increase in ambient temperatures and changes in precipitation in the Project area as much as feasible. Specifically, adjustments will be made to the pavement binder and mix design specifications to better match expected future environmental conditions. Additionally, stiffer asphalt grades and slower-aging binders will be utilized as needed to address increased temperatures and projected temperature change, along with adjustments to the pavement structural design to account for temperature and climatic changes. Incorporation of design elements, like shorter joint spacing and others, will occur to reduce damage from high temperatures. Concrete pavements will be designed to limit moisture damage and shrinkage as much as feasible.

Chapter 4 Comments and Coordination

Early and continuing coordination with the general public and public agencies is an essential part of the environmental process. It helps planners, transportation departments, and transportation agencies determine the necessary scope of environmental documentation and the level of analysis required, and to identify potential impacts and avoidance, minimization, and/or mitigation measures and related environmental requirements. Agency and tribal consultation and public participation for this Project have been accomplished through a variety of formal and informal methods, including interagency coordination meetings, public meetings, public notices, Project Development Team (PDT) meetings, interagency coordination meetings, tribal consultation, and consultation with interested parties. This chapter summarizes the results of the Department's efforts to fully identify, address, and resolve Project-related issues through early and continuing coordination.

4.1 NOTICE OF INITIATION OF STUDIES

An initial public scoping period was held for a 33-day period between October 21 and November 22, 2019. The purpose of the scoping period was to inform the public about the Project and provide the opportunity for public engagement and input through questions and written comments about the Project. The initial scoping period event was promoted through the following methods:

- Advertisements: Local newspapers covering the Interstate (I-) 15 corridor (English and Spanish) in print and online
- Business Chambers of Commerce: Corona Chamber of Commerce and Lake Elsinore Chamber of Commerce
- Certified mail: a compact disc of the complete scoping notification package mailed to agency contacts
- Digital platforms: Riverside County Transportation Commission (RCTC) Facebook, X (formerly Twitter), and Instagram
- Direct mail postcards: Scoping meeting notices mailed to property owners/tenants along the I-15 corridor within a radius between 0.5 and 2 miles around the alignment, depending on geographical contours and residential and commercial developments.
- Elected officials and select environmental organization mailing: Formal scoping notices (English and Spanish) mailed to elected officials representing constituents through the I-15 corridor at the city, county, State, and federal levels and select environmental interested party organizations

- Elected officials outreach: Riverside County Board of Supervisors, Corona City Council members, and Lake Elsinore City Council members

- E-blast announcements: Announcements of the scoping period and meetings sent to email contacts from the Project database

- Geofencing mobile ad campaign: Active in a 5-mile radius along the I-15 corridor (Geofencing advertising is a method in which global positioning system points are set to create a virtual geographic boundary. When a mobile device such as a cell phone or tablet enters the virtual geographic boundary, enabling software is triggered, causing an advertisement to appear on the device.)

- Media story placements: Print newspaper, radio, television, and online news outlets

- Newsletters: We are Temescal Valley, Supervisor Kevin Jeffries's "Jeffries Journal," RCTC's "The Point"

During the scoping period, RCTC conducted three in-person public scoping meetings held from 6 p.m. to 8 p.m. at the following dates and locations:

- November 12, 2019, at Temescal Valley Elementary School

- November 13, 2019, at Eagle Glen Golf Club

- November 14, 2019, at Ortega High School

These in-person meetings were easily accessible to the local communities, including residents and commuters. The in-person meetings were held in an open house format with stations that provided information exhibits on the following topics: Project History, Regional Express Lanes Network, Purpose of Project, Population Trends, Traffic Trends, Current and Proposed Conditions, Current 91 Lanes Express Use, How Do Express Lanes Work?, Environmental Process, Areas of Environmental Analyses, Right of Way, Noise and Potential Noise Barriers, Funding, Anticipated Schedule, Public Scoping Comments (Certified Court Reporter), and Stay Connected.

RCTC and California Department of Transportation (Caltrans) specialists in engineering, environmental, traffic, noise, and right of way (ROW) were available to address concerns and answer questions. A total of 87 community members signed in at the in-person meetings but there were additional attendees who intentionally did not sign in and wished to remain anonymous. Attendees had the option to fill out comment cards or provide oral comments to a certified court reporter available at each of the three meetings.

In addition to the in-person meetings, RCTC hosted an online portal with 24-hour access for the full duration of the scoping period. The online meeting was compliant with the Americans with Disabilities Act and featured the same exhibits as the in-person meetings with the option to submit comments and review informational videos outlining

the Project and overall Project Approval and Environmental Document (PA&ED) delivery process.

A bilingual (English and Spanish), 8.5- by 11-inch, double-sided postcard was developed to inform the public of the start of the scoping period, invite them to attend one of the three in-person scoping meetings, and encourage public participation through the in-person meetings or online meeting option.

While a typical notification area is between 500 feet and 0.25 mile during the Environmental Impact Report/Environmental Assessment (EIR/EA) process, the PDT determined that it was important to reach a larger number of residents and businesses through a greater coverage area. As such, a radius between 0.5 mile and 2 miles was used throughout the corridor, depending on geographical contours and residential/ business developments.

A mail house service was contracted to ascertain property owner and tenant data for residents and businesses in the coverage area. This resulted in an October 18, 2019, mailing of 14,392 postcard scoping meeting notices.

In total, 151 comments were collected during the initial public scoping period from the in-person meetings, the online meeting, email to the Caltrans Project email (15expsouth@dot.ca.gov), email to RCTC's Project information email (15ProjectSouth@rctc.org), and through U.S. mail. Current environmental laws do not require that responses be provided to public comments made during the scoping period. Some of the key issues raised by agencies and the public included: the potential for air quality impacts; an assessment to include full biological habitat types within and adjacent to the Project; analysis of direct, indirect, and cumulative impacts on biological resources; discussion of a range of reasonable alternatives; the incorporation of mitigation measures for impacts on biological resources; analysis of Native American and Tribal Cultural Resources; local traffic in the Temescal Valley area; impacts on future development of the Temescal Valley area; noise impacts on area residences along I-15; consideration of reduced toll costs for senior citizens, disabled, and local area residents; transit service improvements for I-15 south and opportunities to link Lake Elsinore with Corona Metrolink facilities; and consistency with the Riverside County Multiple Species Habitat Conservation Plan (MSHCP). Although no official responses were developed, the comments were reviewed and considered by the PDT as it conducted technical studies and advanced the development of the environmental document.

4.1.1 Notice of Preparation

The California Environmental Quality Act (CEQA) scoping process for the Project was initiated with the preparation and distribution of a Notice of Preparation (NOP) of an EIR/EA, via mail and posting at the State Clearinghouse and Riverside County Clerk. The NOP was posted to the State Clearinghouse on October 21, 2019, beginning the required 30-day review period under CEQA. The State Clearinghouse number assigned was 2019100381, which is referenced in subsequent CEQA filings. The NOP received

two comments, which are posted on the State Clearinghouse website and included at the end of this chapter. One was received from the California Department of Fish and Wildlife (CDFW) and one from the Native American Heritage Commission (NAHC). The NOP was filed with the Riverside County Clerk on October 21, 2019, with an e-file number of E-201901205. The NOP that was filed with the State Clearinghouse and County Clerk is included at the end of this chapter, as are the NOP letter and public notice.

4.2 INTERAGENCY COORDINATION AND CONSULTATION

The formulation of Project alternatives and mitigation has been carried out through a cooperative dialogue among representatives of the following agencies or organizations:

- Caltrans
- Cities of Riverside, Corona, and Lake Elsinore
- County of Riverside and Temescal Valley
- Native American tribal representatives
- Southern California Association of Governments
- California State Historic Preservation Officer (SHPO)
- Transportation Conformity Working Group
- Transportation Corridor Agencies
- U.S. Fish and Wildlife Service (USFWS)
- Historic Preservation Groups:
    - Corona Historic Preservation Society
    - Lake Elsinore Historical Society
    - Riverside County Mexican American Historical Society

The following sections summarize the results of the efforts of Caltrans District 8 to fully identify, address, and resolve Project-related issues through early and continuing coordination.

4.2.1 Cooperative Agreements

RCTC is the local Project Sponsor for funding and administering the Project development effort and has a cooperative agreement (Caltrans Agreement No. 08-1693) with Caltrans for the current PA&ED phase. California Senate Bill (SB) 617 was

approved on October 4, 2023, authorizing the use of progressive design-build for local agency transportation projects. It is expected that RCTC and Caltrans will enter into a cooperative agreement for the progressive design-build phase of this Project and that RCTC will request approval to Advertise, Award and Administer the progressive design-build contract(s).

4.2.2 Other Agreements

Numerous public agencies are involved in or affected by the Project. It is likely that interagency agreements or memoranda of understanding will be required between many of the agencies at a future stage in the Project. The most directly involved agencies, in addition to Caltrans District 8, include RCTC, City of Corona, City of Lake Elsinore, and County of Riverside. It is anticipated that RCTC and Caltrans will enter into a toll facility agreement for operation of the express lane facility.

4.2.3 Native American Consultation

Consultation with a number of Native American tribes (groups and individuals) was conducted in December 2022 in compliance with Section 106 of the National Historic Preservation Act and Assembly Bill 52.

A letter was sent to the NAHC on September 13, 2019, requesting a search of the Sacred Lands File and a list of potentially interested Native American groups and individuals. The NAHC responded on October 1, 2019, stating that a search of the Sacred Lands Files was positive for sacred lands or Traditional Cultural Properties (TCPs) in proximity to the Area of Potential Effects (APE). The NAHC also recommended that the Pechanga Band of Luiseño Indians be contacted for further information. In addition, the NAHC provided a list of Native American contacts who might have knowledge of cultural resources in the Project area.

Using the NAHC list, the Caltrans District 8 District Native American Coordinator sent outreach letters and maps of the Project APE to six Native American groups on October 28, 2019, as follows:

- Andrew Salas, Gabrieleño Band of Mission Indians
- Travis Armstrong, Morongo Band of Mission Indians
- Shasta Gaughen, Pala Band of Mission Indians
- Gary Dubois, Pechanga Band of Luiseño Indians
- Cheryl Madrigal, Tribal Historic Preservation Officer, Pechanga Band of Luiseño Indians
- Joseph Ontiveros, Soboba Band of Luiseño Indians

The letters included a description of the Project and maps indicating the Project location. Table 4-1 includes a summary of consultation to date.

Follow-up communication, which included sending the Architectural Survey Report and Finding of Effect completed for the Project, was completed by Caltrans in June 2023. The reports were sent to the Rincon Band of Luiseño Indians and to the Pechanga Band of Luiseño Indians. No further communication has been received to date other than confirmation of receipt of the reports.

Table 4-1. Tribal Consultation

Native American Group/Individual	Date of First Contact Letter/Email	Date of Response	Date of Second Contact Letter/ Email	Date of Response	Summary of Conversations
Andrew Salas, Chairman, Gabrieleño Band of Mission Indians – Kizh Nation	October 28, 2019	No response	December 2, 2019	December 12, 2019	Phone call – no answer; left a voicemail on December 2, 2019. During a phone call on December 12, 2019, Mr. Salas requested the consultation letter via email, which was provided.
Travis Armstrong, Tribal Historic Preservation Officer, Morongo Band of Mission Indians	October 28, 2019	November 13, 2019, and November 14, 2019	Not applicable	Not applicable	Requested a copy of the NAHC letter, and the Morongo will defer to the Pechanga for this Project.
Shasta Gaughen, Tribal Historic Preservation Officer, Pala Band of Mission Indians	October 28, 2019	December 4, 2019	Not applicable	Not applicable	Phone call – no answer; left a voicemail on December 2, 2019. On December 4, Ms. Gaughen responded that the Project is outside of the Pala's Traditional Use Area and defers to tribes that are in closer proximity.
Gary DuBois, Tribal Historic Preservation Officer via Tuba Ebru Ozdil (Cultural Analyst), Pechanga Band of Luiseño Indians	October 28, 2019	November 22, 2019	November 2, 2021	Not applicable	Formal request to begin Section 106 and AB 52 consultation and that the tribe exercises its right to be involved in the entire environmental review process. Second letter sent to inform Pechanga of APE changes and recognition of TCPs.
Cheryl Madrigal, Tribal Historic Preservation Officer, Rincon Band of Luiseño Indians	October 28, 2019	November 18, 2019	Not applicable	Not applicable	Request formal consultation for AB 52 and Section 106. The tribe requests copies of archaeological records searches and assessments.

Native American Group/Individual	Date of First Contact Letter/Email	Date of Response	Date of Second Contact Letter/ Email	Date of Response	Summary of Conversations
Joseph Ontiveros, Tribal Historic Preservation Officer, Soboba Band of Luiseño Indians	October 28, 2019	November 26, 2019	November 2, 2021	Not applicable	Formal request to initiate AB 52 consultation and government-to-government meetings to begin Section 106 Consultation. Second letter sent to inform Soboba of APE changes and recognition of TCPs.

AB = Assembly Bill

4.2.4 State Historic Preservation Officer

As noted in Section 2.2.10, *Cultural Resources*, four archaeological sites (P-33-000108, -000630, -001099, and -002992) are assumed eligible for the purposes of the Project only (Stipulation VIII.C.4, Cultural Studies Office approval on January 27, 2023). Additionally, three TCPs (Túu'uv, Qaxáalku Payómik, and Qaxáalku Kwíimik) are considered National Register of Historic Places–eligible for the purposes of the Project only with Caltrans' Division of Environmental Analysis Cultural Studies Office approval dated March 10, 2022.

In addition, two properties were evaluated for the Project and were found ineligible: Temescal Canyon Road (P-33-024785/CA-RIV-12277; P-33-028199) and the residence at 18740 Collier Avenue.

Pursuant to Stipulation X.B.2.b of the Section 106 Programmatic Agreement, Caltrans has found that the proposed undertaking would have no adverse effect on historic properties and, given the above nonstandard conditions, sought SHPO comment on this finding. Following a review of the documentation submitted, SHPO concurred with the two ineligible properties and did not object to the finding for the Project on May 26, 2023. The letter from SHPO is included at the end of this chapter.

4.2.5 U.S. Fish and Wildlife Service

Official species lists were obtained from USFWS on December 4, 2020, and were updated on August 20, 2021; May 16, 2023; September 14, 2023; September 17, 2024; and July 17, 2025. The species lists provide information about the threatened, endangered, and proposed species; designated critical habitat; and candidate species that may occur in the Biological Study Area. The species lists provided by USFWS are included at the end of this chapter.

4.2.6 U.S. Army Corps of Engineers

A Preliminary Jurisdictional Delineation (October 2021) report was prepared as an appendix to the Natural Environment Study (Minimal Impacts) (October 2023) supporting this EIR/EA. Areas within the Jurisdictional Delineation Study Area have been identified as potentially subject to U.S. Army Corps of Engineers (USACE) jurisdiction pursuant to Section 404 of the Clean Water Act. The Jurisdictional Delineation will be submitted to USACE for its review and concurrence.

4.2.7 Riverside Transit Agency

In early 2024, RCTC began coordinating with the Riverside Transit Agency (RTA) regarding the development of the Project to improve and potentially expand RTA's existing CommuterLink Route 206, which currently operates along I-15 between the Cities of Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). Once completed, the ELPSE will allow the RTA buses to

utilize the express lanes, bypassing growing congestion along the corridor and improving on bus travel time performance. Increased use of RTA Route 206 would promote travel mode shift, help address competing passenger and commercial traffic along I-15, and contribute to a reduction in air quality emissions) resulting in an improvement in air quality. A Project endorsement letter is included at the end of this chapter.

4.2.8 MSHCP Consistency Review

The Project is identified in the Western Riverside County MSHCP as a Planned Road and a Covered Activity (MSHCP Volume I, Section 7.3.5). Portions of the Project lie both inside and outside of Criteria Areas. The MSHCP is a habitat conservation plan pursuant to Section 10(a)(1)(B) of the federal Endangered Species Act (FESA), as well as a Natural Communities Conservation Plan under the Natural Community Conservation Planning Act of 2001. The MSHCP allows for participating jurisdictions to authorize “take” of plant and wildlife species identified within the MSHCP Area. USFWS and CDFW have authority to regulate the take of threatened, endangered, and rare species. CDFW authorizes take under the California Endangered Species Act (CESA). “Take Authorization” is granted by USFWS and CDFW under the MSHCP outside of the MSHCP Conservation Area, in exchange for the assembly and management of the coordinated MSHCP Conservation Area.

Of the 146 Covered Species addressed in the MSHCP, 118 species are considered adequately conserved. For 16 of the 28 Covered Species, species-specific conservation objectives are required in order to be considered adequately conserved; for 12 of these 16 species, a Memorandum of Understanding must be executed with the U.S. Forest Service that addresses management for these species on U.S. Forest Service land. For the remaining 12 species of the 28, additional surveys may be required, with specific survey requirements outlined in the species-specific conservation objectives and in Sections 6.1.2, 6.1.3, and 6.3.2 of the MSHCP.

Avoidance and minimization measures are required for the protection of species associated with riparian/riverine areas and vernal pools (Section 6.1.2 of the MSHCP). Urban/Wildlands Interface Guidelines (Section 6.1.4 of the MSHCP) to address indirect effects of project development on MSHCP Conservation Areas are required. Compliance with best management practices and the siting and design criteria as set forth in Section 7.0 and Appendix C of the MSHCP are required.

Mitigation responsibilities include the collection of mitigation fees and other relevant fees according to Section 8.5 of the MSHCP, and compliance with the Habitat Acquisition Negotiation Strategy process or equivalent to ensure application of the MSHCP Criteria and the requirements as set forth above.

The MSHCP does not provide coverage for any applicable regulatory standards related to aquatic functions and values. This includes California Fish and Game Code Section 1600 et seq., and the federal Clean Water Act (Sections 401, 402, and 404).

The MSHCP does not provide coverage for regulations related to the Migratory Bird Treaty Act or California Fish and Game Code Sections 3503 (unlawful to destroy nests or eggs) or 3503.5 (unlawful to destroy any birds in the orders of Falconiformes or Strigiformes or their nest or eggs).

The MSHCP Consistency Review has been completed with the Western Riverside County Regional Conservation Authority (RCA), USFWS, and CDFW. The Project was determined to be consistent with the MSHCP on June 13, 2025; the determination letter is included at the end of this chapter along with the Project's Biological Opinion received on September 9, 2025.

4.2.9 U.S. Environmental Protection Agency

During the public review period of October 9, 2024, to November 26, 2024, the U.S. Environmental Protection Agency (U.S. EPA) reached out to Caltrans to discuss the Project. On November 7, 2024, the Project team met with two representatives from U.S. EPA to discuss an overview of the Project features and completed analysis.

4.3 COMMUNITY OUTREACH AND PUBLIC INVOLVEMENT

4.3.1 Project Development Team

A Project kick-off meeting between the PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside occurred on Tuesday June 4, 2019, to discuss the intent to initiate the PA&ED studies to extend the I-15 express lanes to the south, from Cajalco Road to State Route 74 (Central Avenue). The Project overview, Project limits, purpose and need, funding, and schedule were presented at the meeting. Since then, PDT meetings have been held every month and all interested parties have been invited to attend to stay updated on the progress of the Project.

Several city representatives from Corona and Lake Elsinore, along with representatives from RCTC, Caltrans, HDR Project Team, County of Riverside, and other interested parties, participated in the regular PDT meetings conducted by Caltrans District 8 for the Project. These meetings were held via Webex on the dates listed below:

6/4/2019, 7/2/2019, 8/6/2019, 9/3/2019, 10/1/2019, 11/5/2019, 12/3/2019, 1/7/2020, 2/4/2020, 3/3/2020, 4/7/2020, 5/5/2020, 6/2/2020, 7/7/2020, 8/4/2020, 9/1/2020, 10/6/2020, 11/3/2020, 12/1/2020, 1/5/2021, 2/2/2021, 3/2/2021, 4/6/2021, 5/4/2021, 6/1/2021, 7/6/2021, 8/3/2021, 9/7/2021, 10/5/2021, 11/2/2021, 12/7/2021, 1/4/2022, 2/1/2022, 3/1/2022, 4/5/2022, 5/3/2022, 6/7/2022, 7/5/2022, 8/2/2022, 9/6/2022, 10/4/2022, 11/1/2022, 12/6/2022, 1/12/2023, 2/9/2023, 3/9/2023, 4/13/2023, 5/11/2023, 6/8/2023, 7/13/2023, 8/10/2023, 9/14/2023, 10/12/2023, 11/9/2023, 12/14/2023, 1/10/2024, 2/8/2024, 3/14/2024, 4/7/2024, 5/9/2024, 6/13/2024, 7/11/2024, 8/8/2024, and 9/12/2024, 10/10/2024, 11/14/2024, 12/12/2024, 1/9/2025, 2/13/2025, 3/13/2025, 4/10/2025, 5/8/2025, 6/12/2025, 7/10/2025, and 8/14/2025. The meetings are anticipated to continue on a monthly basis throughout the life of the Project.

4.3.2 Project Websites

RCTC's Project web page content was updated in advance of the scoping period. This included the Project overview, status, schedule, and history sections. The Project fact sheet was also updated in English and Spanish and posted to the website. The web page can be found at the following location: https://www.rctc.org/projects/i15-express-southern-extension/.

As previously discussed, an online meeting component was developed and integrated into the Project web page, which gave the public the opportunity to access scoping meeting information at the start of the scoping period on October 21, 2019. This included informational narrated videos that provided overviews of the Project and scoping meeting sections, as well as all the exhibits that were displayed at the three in-person scoping meetings on November 12, 13, and 14, 2019. The online meeting also included an online form through which the public could submit comments electronically.

At the end of the scoping period on November 22, 2019, the online meeting section was closed and the content was moved to the "Additional Resources" section of the Project web page so that the public could continue to access the information at any time.

A calendar of social media posts was developed to promote the scoping period and scoping meetings and to encourage the public to provide comments about the Project. Posts were developed for RCTC's Facebook, Instagram, and X (formerly Twitter) accounts.

4.3.2.1 Facebook

There were 10 organic (unpaid) Facebook posts in a 1-month period to create awareness of the scoping period and meetings as well as encourage the public to submit comments. Posts included tagging (engaging social media users) relevant audiences.

4.3.2.2 X

There also were 10 organic X posts. One post was posted as an advertisement. Posts included tagging relevant audiences.

4.3.2.3 Instagram

There were eight organic Instagram posts in a 1-month period. One post was posted as an advertisement. Posts included tagging relevant audiences.

4.3.3 Geofencing Mobile Advertising

In an additional effort to capture target audiences in the Project area, the PDT enlisted the services of Outfront Media to implement a 3-week geofencing mobile advertising campaign. Geofencing advertising is a method in which global positioning system points are set to create a virtual geographic boundary. When a mobile device such as a cell

phone or tablet enters the virtual geographic boundary, enabling software is triggered, causing an advertisement to appear on the device.

For this campaign, points within a 5-mile radius were selected along the corridor, including In-N-Out at Ontario Avenue and I-15 in Corona to the north, Temescal Valley Elementary in Corona, Glen Eden Sun Club in Corona, Temescal Canyon High School in Lake Elsinore, and In-N-Out at Railroad Canyon Road to the south. When people on a mobile device entered this area, a banner for the Project appeared on their device. When clicked, the ad would direct users to the Project web page.

4.3.4 Media Coverage

RCTC developed a news release announcing the start of the scoping period and encouraging the public to participate in the process by visiting the online meeting; attending in-person scoping meetings in Corona, Temescal Valley, and Lake Elsinore; and submitting comments. The news release was distributed to local and regional media on October 16, 2019. The news media coverage garnered through these efforts was provided by MyNewsLA.com, KNX 1070 AM, *Lake Elsinore-Wildomar Patch*, and *The Press-Enterprise*.

4.3.5 Newsletter Coverage

Newsletter coverage for the Project scoping period and scoping meetings was provided by the following newsletters:

- “We Are Temescal Valley”
- RCTC’s “The Point”
- WTS International’s “Friends of WTS”
- Mobility 21’s “Forward Motion”
- Supervisor Kevin Jeffries’s “Jeffries Journal”

4.4 NOTICE OF AVAILABILITY

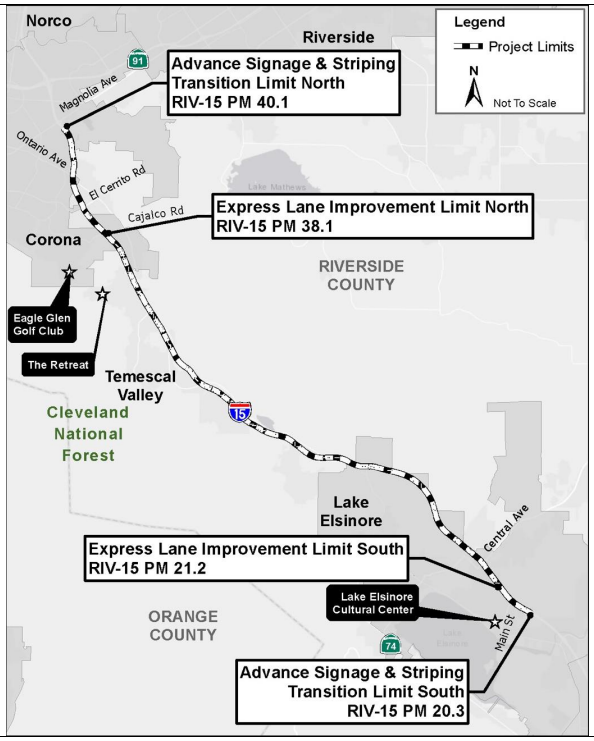
On October 9, 2024, Caltrans released the Draft EIR/EA for public review and comment, with the public review period ending on November 26, 2024. A Notice of Availability (NOA) of the Draft EIR/EA was filed with the Governor’s Office of Planning and Research (OPR) State Clearinghouse on October 9, 2024, in English and Spanish, and was mailed to local, State, and federal agencies; elected officials; interested groups, organizations, and individuals; property owners; and occupants within a quarter-mile radius of the Project site. The NOA was published in English in the Press Enterprise, an English-language newspaper, and a Spanish version was published in Excélsior, an online-only Spanish-language newspaper, on October 9, 2024. The NOA was also filed

and posted with the Riverside County Assessor-County Clerk-Recorder on October 8, 2024. The NOA included project details, the viewing locations of the Draft EIR/EA, ways to submit comments, the dates of the public circulation period, and information regarding the public hearings held for the Project. The following pages include the NOA, newspaper proofs of publication, and the NOA posted with the Riverside County Assessor-County Clerk-Recorder.

PUBLIC NOTICE

Draft Environmental Impact Report/Environmental Assessment available for Interstate 15 Express Lanes Project Southern Extension (ELPSE)

Announcement of Public Hearing



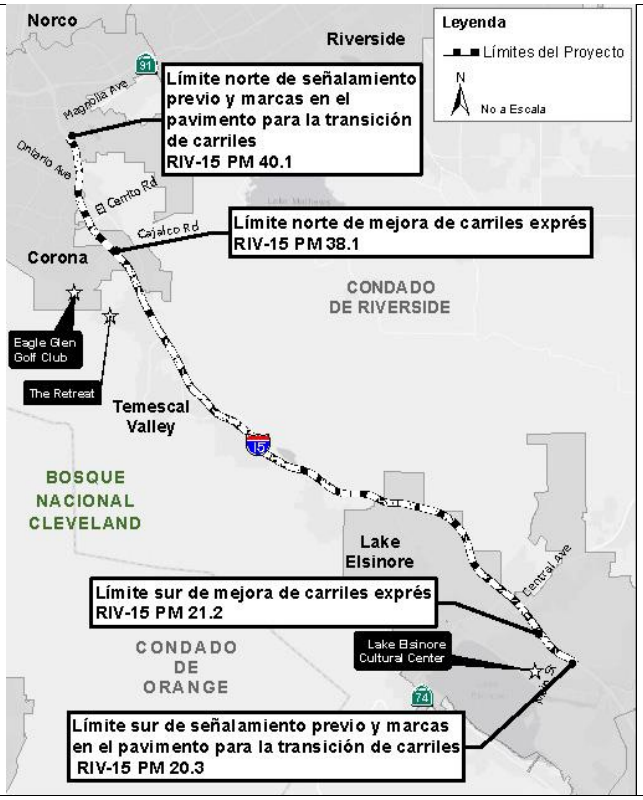
WHAT IS BEING PLANNED?	The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (CALTRANS), is proposing to extend the tolled express lanes in both directions along Interstate (I-) 15 in Riverside County between the cities of Lake Elsinore and Corona. RCTC is the local Project sponsor and CALTRANS is the lead agency under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). RCTC and CALTRANS have conducted preliminary engineering and environmental studies to support the Environmental Impact Report and Environmental Assessment (EIR/EA) for the proposed I-15 Express Lanes Project Southern Extension (Project). The Project is intended to improve and manage traffic operations, congestion, and travel times along the corridor by extending the I-15 Express Lanes an additional 15.8 miles. The proposed improvements would extend from El Cerrito Road in Corona, through Temescal Valley, to State Route (SR-) 74 (Central Avenue) in Lake Elsinore. The Project would also add southbound auxiliary lanes between both the Main Street (post mile [PM] 21.2) Off-Ramp and SR-74 (Central Avenue) On-Ramp (approximately 0.75 mile), and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (PM 23.9) (approximately 1 mile). Other Project features include widening 15 bridges, creating multiple express lane access points, and constructing potential noise barriers, retaining walls, drainage systems, electronic toll collection equipment, ramp meters, and signage that would be located within the Project limits between PM 20.3 and PM 40.1. This Project, as currently proposed, is included in the Southern California Association of Governments (SCAG) 2023 Federal Transportation Improvement Program (FTIP) under the Project's FTIP ID, RIV170901 (Amendment #23-16) and fiscally constrained. The Project is also included in the SCAG 2024–2050 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) Project List under its RTP ID 3160001 and the Project's FTIP ID. According to the FTIP, the Project cost is estimated to be $668 million and is proposed to be funded by local agency funds. Construction activities are anticipated to commence in 2026 and be completed by 2030. Construction is planned to last approximately 36 months.
WHY THIS AD?	CALTRANS has studied the effects this Project may have on the environment. Our studies show it will significantly affect the quality of the environment. The Draft EIR/EA explains why. This notice is to inform you of the preparation of the Draft EIR/EA and of its availability for you to read. A hearing will be held to give you an opportunity to talk about certain design features of the Project with CALTRANS staff before the final design is selected. The tentative schedule for construction will be discussed. **Air Quality Conformity** Air Quality Conformity requirements apply only in nonattainment and "maintenance" (former nonattainment) areas for the National Ambient Air Quality Standards (NAAQS), and only for the specific NAAQS that are or were violated. United States Environmental Protection Agency (USEPA) regulations at 40 Code of Federal Regulations (CFR) 93 govern the conformity process. Conformity requirements do not apply in unclassifiable/attainment areas for NAAQS and do not apply at all for State standards regardless of the status of the area. The Project is in an area that is extreme nonattainment for the 8-hour ozone (O_3), serious nonattainment for particles of 2.5 micrometers or smaller ($PM_{2.5}$), and attainment-maintenance for carbon monoxide (CO), particles of 10 micrometers or smaller (PM_{10}), and nitrogen dioxide (NO_2). Therefore, a Project-level air quality conformity analysis was required. The Draft EIR/EA explains the air quality conformity findings. <u>Not a Project of Air Quality Concern (POAQC).</u> The Project-level conformity analysis shows that the Project will conform to the State Implementation Plan, including localized impact analysis with interagency consultation for particulate matter (PM_{10} and $PM_{2.5}$) and CO required by 40 CFR 93.116 and 93.123. This Project is not considered a Project of Air Quality Concern regarding particulate matter (PM_{10} and $PM_{2.5}$) as defined in 40 CFR 93.123(b)(1). A detailed PM_{10} and $PM_{2.5}$ hot-spot analysis was not completed because Clean Air Act and 40 CFR 93.116 requirements are met without an explicit hot-spot analysis. The Project comes from a conforming RTP and Transportation Improvement Program (TIP). Comments are requested regarding the Project-

	level conformity analysis. On September 28, 2021, the Transportation Conformity Working Group (which includes federal [USEPA and Federal Highway Administration], State [California Air Resources Board and CALTRANS], regional [air quality management districts and SCAG], and sub-regional [county transportation commissions] agencies and other stakeholders) confirmed that the proposed I-15 ELPSE is not a POAQC.
WHAT'S AVAILABLE?	You can look at or obtain the Draft EIR/EA at the CALTRANS District Office (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) on weekdays from 8:00 a.m. to 5:00 p.m. and at the RCTC office (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) Monday through Thursday from 8:00 a.m. to 5:00 p.m. Maps and other information are also available. There are also copies of the Draft EIR/EA available at: City of Lake Elsinore 130 South Main Street Lake Elsinore, CA 92530 Available for review: • Monday through Thursday from 8:00 a.m. to 5:00 p.m. • Friday from 8:00 a.m. to 4:00 p.m. • Closed on holidays Please call the city of Lake Elsinore at (951) 674-3124 to confirm availability of hard copies for review. Lake Elsinore Library 600 West Graham Lake Elsinore, CA 92530 Available for review: • Monday, Wednesday, and Thursday from 10:00 a.m. to 6:00 p.m. • Tuesday from 11:00 a.m. to 7:00 p.m. • Friday from 10:00 a.m. to 5:00 p.m. • Saturday from 10:00 a.m. to 2:00 p.m. • Closed on holidays Please call the Lake Elsinore Library at (951) 674-4517 to confirm availability of hard copies for review. Corona Public Library 650 South Main Street Corona, CA 92882 Available for review: • Monday through Thursday from 10:00 a.m. to 8:00 p.m. • Friday from 10:00 a.m. to 6:00 p.m. • Saturday from 1:00 p.m. to 5 p.m. • Closed on holidays Please call the Corona Public Library at (951) 736-2381 to confirm availability of hard copies for review. Additional Project information may be downloaded from RCTC's website at: https://www.rctc.org/projects/i15-express-southern-extension/
WHERE YOU COME IN	Have the potential impacts been addressed? Do you have information that should be included? Your comments will be part of the public record. If you wish to make a comment on the Draft EIR/EA, you may submit your written comments until November 26, 2024, to RCTC. Jeff Dietzler, Capital Projects Manager (Tolling) Riverside County Transportation Commission 4080 Lemon Street, Third Floor P.O. Box 12008 Riverside, CA 92501 or via email to: 15projectsouth@rctc.org Please use "Interstate 15 Express Lanes Project Southern Extension" in the subject line. Public hearings will be held on Tuesday, October 22, 2024; Wednesday, October 23, 2024; and Tuesday, October 29, 2024, to discuss the Project. The time and place will be announced in local newspapers.
WHEN AND WHERE	The hearings will be held at the following locations and dates: **Temescal Valley** The Retreat 8007 Soft Winds Drive Corona, CA 92883 Public hearing will be held on: • **Tuesday, October 22, 2024** • **From 6 p.m. to 8 p.m.** **Lake Elsinore** Lake Elsinore Cultural Center 183 N Main Street Lake Elsinore, CA 92530 Public hearing will be held on: • **Wednesday, October 23, 2024** • **From 6 p.m. to 8 p.m.** **Corona** Eagle Glen Golf Club 1800 Eagle Glen Parkway Corona, CA 92883 Public hearing will be held on: • **Tuesday, October 29, 2024** • **From 6 p.m. to 8 p.m.**
CONTACT	For more information about this study, any transportation matter or for individuals who require documents in alternative formats are requested to contact Riverside County Transportation Commission, Attn: Jeff Dietzler, Capital Projects Manager (Tolling), 4080 Lemon Street, 3rd Floor, Riverside, CA 92502; call (951) 787-7141 (voice); or use the California Relay Service at (800) 735-2929 (TTY), (800) 735-2929 (Voice), or 711. **EA** 08-0J0820 **PN** 08-18000063

Aviso Público

Reporte de Impacto Ambiental y Evaluación Ambiental disponibles para el Proyecto de Extensión de los Carriles Exprés en el Segmento Sur de la Autopista Interestatal 15 (Conocido como I-15 Express Lanes Project Southern Extension o por las siglas ELPSE en inglés)

Anuncio de Audiencia Pública



¿Qué Se Planifica?	La Comisión del Transporte del Condado de Riverside (RCTC por sus siglas en inglés) en cooperación con el Departamento de Transporte de California (CALTRANS por sus siglas en inglés), proponen extender los carriles exprés con peaje en ambas direcciones a lo largo de la interestatal 15 en el condado de Riverside, entre las ciudades de Lake Elsinore y Corona. RCTC es el patrocinador local del proyecto y CALTRANS es la agencia principal bajo el Acta de Calidad del Medio Ambiente de California (CEQA por sus siglas en inglés) y el Acta de Póliza Nacional del Medio Ambiente (NEPA por sus siglas en inglés). RCTC y CALTRANS han llevado a cabo estudios preliminares de ingeniería y medio ambiente para redactar el Reporte de Impacto Ambiental y de Evaluación Ambiental (EIR/EA por sus siglas en inglés) para la propuesta de Extensión de los Carriles Exprés en el segmento Sur de la Autopista Interestatal 15 (proyecto). El proyecto tiene por objetivo mejorar y gestionar las operaciones de tráfico, la congestión, y los tiempos de viaje a lo largo del corredor mediante la extensión de los Carriles Exprés de la Autopsita I-15 por una distancia adicional de 15.8 millas. Las mejoras que se proponen se extenderían desde El Cerrito Road en Corona, a través de Temescal Valley, hasta la Carretera 74 (Central Avenue) en Lake Elsinore. El proyecto también añadiría carriles auxiliares en la dirección sur entre la rampa de salida de Main Street (poste de milla [PM por sus siglas en inglés] 21.2) y la rampa de entrada de la Carretera 74 (Central Avenue) (aproximadamente 0.75 millas), y entre la rampa de salida de la Carretera 74 (Central Avenue) y la rampa de entrada de Nichols Road (PM 23.9) (aproximadamente 1 milla). Otras características del proyecto incluyen la ampliación de 15 puentes, la creación de múltiples puntos de acceso a los carriles exprés, y la posible construcción de barreras acústicas, muros de contención, sistemas de drenaje, equipos electrónicos para el cobro de peaje, semáforos en las rampas de entrada, y señalamientos que se ubicarían dentro de los límites del proyecto entre el PM 20.3 y PM 40.1. Este proyecto, tal como se propone actualmente, está incluido en el Programa Federal de Mejora del Transporte (FTIP por sus siglas en inglés) 2023 de la Asociación de Gobiernos del Sur de California (SCAG por sus siglas en inglés) bajo el número de identificación FTIP del proyecto, RIV170901 (Enmienda #23-16) y fiscalmente restringido. El proyecto también está incluido en la Lista de Proyectos del Plan de Transporte Regional (RTP por sus siglas en inglés) /Estrategia de Comunidades Sustentables (SCS por sus siglas en inglés) del SCAG 2024-2050 bajo el número de identificación RTP 3160001 en conjunto con el número de identificación FTIP del proyecto. De acuerdo con el FTIP, el costo del proyecto se estima en $668 millones de dólares y se propone que sea financiado con fondos de la agencia local. Se anticipa que las actividades de construcción comenzarán en el 2026 y serán completadas en el 2030. Se planea que la construcción tendrá una duración aproximada de 36 meses.
¿Por Qué Este Aviso?	CALTRANS ha estudiado los efectos que este proyecto podría tener sobre el medio ambiente. Nuestros estudios demuestran que afectará significativamente la calidad del medio ambiente. El documento preliminar del EIR/EA explica por qué. Este anuncio es para informarle sobre la preparación del documento preliminar del EIR/EA y de la disponibilidad de este para su lectura. Se llevará a cabo una reunión a puertas abiertas para darle la oportunidad de discutir ciertas características del diseño del proyecto con el personal de CALTRANS antes de que se seleccione el diseño final. También se discutirá el cronograma tentativo de la construcción. **Conformidad de la Calidad del Aire** Los requisitos de conformidad de la calidad del aire sólo se aplican en zonas de incumplimiento y de "mantenimiento" (anteriormente de incumplimiento) de los Estándares Nacionales de la Calidad del Aire Ambiental (NAAQS por sus siglas en inglés), y solo para los NAAQS específicos que son o han sido incumplidos. Las regulaciones de la Agencia de Protección Ambiental de Estados Unidos (USEPA por sus siglas en inglés) del 40 del Código de Reglamentos Federales (CFR por sus siglas en inglés) 93 rigen el proceso de conformidad. Los requisitos de conformidad no se aplican en las zonas inclasificables/de cumplimiento de los NAAQS y no se aplican en absoluto a los estándares

	estatales, independientemente de la situación de la zona. El proyecto está en una zona de incumplimiento extremo por ozono (O_3) de 8 horas, y de incumplimiento grave por partículas de 2.5 micrómetros o menos ($PM_{2.5}$), y de cumplimiento-mantenimiento por el monóxido de carbono (CO), partículas de 10 micrómetros o menos (PM_{10}), y el dióxido de nitrógeno (NO_2). Por lo tanto, fue necesario un análisis de conformidad de la calidad del aire a nivel proyecto. El documento preliminar del EIR/EA explica las conclusiones sobre la conformidad de la calidad del aire. No es un Proyecto de Preocupación por la Calidad del Aire (POAQC por sus siglas en inglés). El análisis de conformidad a nivel proyecto muestra que el proyecto se ajustará al Plan de Implementación Estatal, incluyendo el análisis de impacto localizado con consulta entre agencias para partículas materiales (PM_{10} and $PM_{2.5}$) y CO requerido por el 40 CFR 93.116 y 93.123. Este proyecto no se considera un proyecto de detrimento a la calidad del aire en relación con las partículas materiales (PM_{10} and $PM_{2.5}$) como se define en el 40 CFR 93.123(b)(1). No se realizó un análisis detallado de los puntos críticos de PM_{10} and $PM_{2.5}$ debido a que los requisitos de la Ley de Aire Limpio y del 40 CFR 93.116 se cumplen sin la necesidad de hacer un análisis a fondo de los puntos críticos. El proyecto está incluido en el RTP y en el Programa de Mejora del Transporte (TIP por sus siglas en inglés) autorizados. Se solicitan sus comentarios sobre el análisis de conformidad que se realizó a nivel proyecto. El 28 de septiembre del 2021, el Grupo de Trabajo de Conformidad del Transporte (TCWG por sus siglas en inglés) (el cual incluye agencias federales [USEPA y la Administración Federal de Carreteras (FHWA, por sus siglas en inglés), estatales [Junta de Recursos del Aire de California y CALTRANS], regionales [distritos de gestión de la calidad del aire y SCAG], y subregionales [comisiones de transporte del condado] agencias y otras partes interesadas) confirmó que el proyecto I-15 ELPSE propuesto no es un POAQC.
¿Qué Material Estará Disponible?	Puede consultar u obtener el documento preliminar del EIR/EA en la Oficina de Distrito de CALTRANS (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) en días laborales de 8:00 a.m. a 5:00 p.m. y en la oficina de RCTC (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) de lunes a jueves de 8:00 a.m. a 5:00 p.m. Mapas y otra información también están disponibles. También hay copias disponibles del documento preliminar del EIR/EA en los siguientes lugares: City of Lake Elsinore 130 South Main Street Lake Elsinore, CA 92530 Disponible para revisión: • lunes a jueves de 8:00 a.m. a 5:00 p.m. • viernes de 8:00 a.m. a 4:00 p.m. • Cerrado los días festivos Por favor, llame a la ciudad de Lake Elsinore al (951) 674-3124 para confirmar la disponibilidad de copias impresas para su revisión. Lake Elsinore Library 600 West Graham Lake Elsinore, CA 92530 Disponible para su revisión: • lunes, miércoles y jueves de 10:00 a.m. a 6:00 p.m. • martes de 11:00 a.m. a 7:00 p.m. • viernes de 10:00 a.m. a 5:00 p.m. • sábado de 10:00 a.m. a 2:00 p.m. • Cerrado los días festivos Por favor, llame al Lake Elsinore Library al (951) 674-4517 para confirmar la disponibilidad de copias impresas para su revisión. Corona Public Library 650 South Main Street Corona, CA 92882 Disponible para su revisión: • lunes a jueves de 10:00 a.m. a 8:00 p.m. • viernes de 10:00 a.m. a 6:00 p.m. • sábado de 1:00 p.m. a 5 p.m. • Cerrado los días festivos Por favor, llame al Corona Public Library al (951) 736-2381 para confirmar la disponibilidad de copias impresas para su revisión. Puede descargar información adicional sobre el proyecto en el sitio web de RCTC: https://www.rctc.org/es/projects/i15-express-southern-extension/
Otras Formas en que Puede Participar	¿Se han abordado los posibles impactos? ¿Dispone de información que debería incluirse? Sus comentarios serán parte del registro público. Si desea hacer un comentario sobre el documento preliminar del EIR/EA, puede presentar sus comentarios por escrito hasta el 26 de noviembre del 2024, dirigidos a RCTC. Jeff Dietzler, Capital Projects Manager (Tolling) Riverside County Transportation Commission 4080 Lemon Street, Third Floor P.O. Box 12008 Riverside, CA 92501 o por correo electrónico a: 15projectsouth@rctc.org En su mensaje por favor incluya “Interstate 15 Express Lanes Project Southern Extension” en la línea del asunto. Las audiencias públicas a puertas abiertas se llevarán a cabo el martes 22 de octubre del 2024; el miércoles 23 de octubre del 2024; y el martes 29 de octubre del 2024, para discutir el Proyecto. La hora y el lugar se anunciarán en los periódicos locales.
Cuando y Donde	Las audiencias públicas se llevarán a cabo en los siguientes lugares y fechas: **Temescal Valley** The Retreat 8007 Soft Winds Drive Corona, CA 92883 Reunión de información pública se llevará a cabo: • **martes 22 de octubre del 2024** • **De 6 p.m. a 8 p.m.** **Lake Elsinore** Lake Elsinore Cultural Center 183 N Main Street Lake Elsinore, CA 92530 Reunión de información pública se llevará a cabo: • **miércoles 23 de octubre del 2024** • **De 6 p.m. a 8 p.m.** **Corona** Eagle Glen Golf Club 1800 Eagle Glen Parkway Corona, CA 92883 Reunión de información pública se llevará a cabo: • **martes 29 de octubre del 2024** • **De 6 p.m. a 8 p.m.**

People flee as Milton aims at Florida coast

Residents brace for a possible rare direct hit from hurricane in Tampa metro region

By Terry Spencer and Haven Daley
The Associated Press

TAMPA, FLA. » Fearful Florida residents streamed out of the Tampa Bay region Tuesday ahead of what could be a once-in-a-century direct hit from Hurricane Milton, as crews worked furiously to prevent furniture, appliances and other waterlogged wreckage from the last big storm from becoming deadly projectiles in this one.

The preparations marked the last chance for millions of people in the Tampa metro area to prepare for lethal storm surges, ferocious winds and possible tornadoes in a place that has narrowly avoided a head-on blow from a major storm for generations.

"Today's the last day to get ready," said Craig Fugate, a former Federal Emergency Management Agency director who previously ran the state's emergency operation division. "This is bringing everything."

Gov. Ron DeSantis said the state deployed over 300 dump trucks that had removed 1,300 loads of debris left behind by Hurricane Helene by Tuesday afternoon. In Clearwater Beach, Nick Szabo spent a

City takes UCR to court over campus expansion

PHOTOS BY TERRY PIERSON — STAFF PHOTOGRAPHER

University Neighborhood Association co-chairs Gurumantra Khalsa, left, and Kevin Dawson, standing near the south end of the UC Riverside campus last month, say the university pushes the costs of its growth onto the city.

Officials allege university unwilling to pay its fair share for impact of growth

By Beau Yarbrough and Jordan B. Darling
Staff writers

After a 70-year relationship, the city of Riverside and UC Riverside are taking each other to court.

The city is alleging that the university, with its ambitious future growth plans, is shirking its responsibilities to the city it calls home.

Riverside has requested a court order against the University of California Regents over UCR's 2021 long-range development plan, the road map for the campus's next 15 years.

"The city is thus now bringing this action to challenge the UC Regents' failure to adequately analyze and mitigate the environmental impacts" of the plan in its final environmental impact report, the 43-page document states.

The city alleges UCR's plan and its accompanying environmental report ignores or minimizes the campus's impacts on air pollution, wastewater, stormwater, light pollution, and the off-campus housing needs of thousands of more students. Riverside also contends the university doesn't plan to pay for additional demands on police, mass transit and city parks.

"The campus is going to grow," said Kevin Dawson, a Riverside resident and co-chair of the University Neighborhood Association, which previously took unsuccessful legal action against UCR over the issue. "The existing sewer lines and water lines and electrical will have to be upgraded in order to support that. Well, who's going to pay for that? UCR likes to push the costs of their growth onto other people. ... They

MIDDLE EAST

Hezbollah steps up rocket assault

Israel sends more troops into Lebanon, says senior militant commander killed in airstrike

By Bassem Mroue and Tia Goldenberg
The Associated Press

BEIRUT » Hezbollah fired another barrage of rockets into Israel on Tuesday, and the militant group's acting leader vowed to keep up pressure that has forced tens of thousands of Israelis from their homes near the Lebanese border.

The Israeli military said it sent more ground troops into southern Lebanon and that a senior Hezbollah commander was killed in an airstrike.

Dozens of rockets fired by Hezbollah were aimed as far south as Haifa, and the Israeli government warned residents north of the coastal city to limit activities, prompting the closure of more schools. The Israeli military said Hezbollah launched about 180 rockets across the border.

Sheikh Naim Kassem, Hezbollah's acting leader, said its military capabilities remain intact after weeks of heavy Israeli airstrikes across large parts of Lebanon and attacks that killed its top commanders in a matter of days. He said Israeli forces have not been able to advance since launching a ground incursion into Lebanon last week.

Kassem, speaking by video from an undisclosed location, said Hezbollah will name a new leader to succeed longtime leader Hassan Nasrallah, "but the circumstances are difficult because of the war."

In a statement addressed to the people of Lebanon, Israeli Prime Minister Benjamin Netanyahu called Hezbollah "weaker than it has been for many, many years." He added: "We took out thousands of terrorists, including Nasrallah himself, and Nasrallah's replacement, and the replacement of his replacement," but without naming them.

Nasrallah was killed in an Israeli airstrike in Beirut last month. Hashem Safieddine, a cousin of Nasrallah who oversees the group's political affairs, was generally regarded as the heir apparent. But no announcement has been made on a successor, and Safieddine has not appeared in public or made any public statements since Nasrallah's death.

Rear Adm. Daniel Hagari, an Israeli military spokesman, said Tuesday night that Israel

Disneyland ticket prices go above $200 at high end

Tiered system has average increase of 6% effective today, though lowest price for one day stays at $104

By Brady MacDonald
bmacdonald@scng.com

Disneyland has raised prices on most daily tickets and annual passes while keeping the lowest-priced admission unchanged as the Anaheim theme park prepares for the debut of Tiana's Bayou Adventure in November and a yearlong 70th anniversary celebration in 2025.

Ticket prices for Disneyland and Disney California Adventure increased an average of 6% today, with the cheapest Magic Key annual pass climbing by 20%.

The Disneyland resort provides a wide variety of ticket, dining and hotel options along with promotional offers throughout the year to help visitors save money, according to Disneyland officials.

The highest-priced one-park, one-day ticket for Disneyland and Disney California Adventure broke through the $200 barrier for the first time in the park's 69-year history. A decade ago, a one-park, one-day ticket to Disneyland cost $96 in 2014 before Disneyland moved to a tiered-pricing system.

The most expensive tickets in Disneyland's seven-tier pricing system rose from $194 to $206 for one-day single-park admission and from $259 to $271 for a one-day park hopper.

The lowest-priced one-day, one-park ticket has remained unchanged at $104 since 2019. The cheapest one-day park-hopper ticket also remains the same at $169.

Single-day, single-park ticket prices increased from zero percent to 6.5%: Tier 0 ($104), Tier 1 ($126), Tier 2 ($142), Tier 3

WAR IN EUROPE

ANDRII MARIENKO — THE ASSOCIATED PRESS

Ukrainian soldiers inspect the site of Russian guided air bombs attack that damaged a multistory apartment buildings in Kharkiv, Ukraine, on Tuesday.

After key town falls in Ukraine's east, Russians still advancing

By Constant Méheut
The New York Times

KYIV, Ukraine — A week after Russia captured Vuhledar, a town that anchored Ukraine's defenses in the country's southeast, Moscow's forces are continuing to advance in the area, pushing into or flanking several towns as they try to break through Ukrainian lines.

Russian troops have now entered Toretsk, a city about 50 miles north of Vuhledar, and are advancing toward its center, according to battlefield maps compiled by independent groups analyzing combat footage. A Ukrainian army spokesperson, Anastasia Bobovnikova, said late Monday that Russia had entered the city, noting that "fighting is taking place literally at every entrance" to it.

The Russian army has also made small advances along the jagged, curving front line that stretches from Toretsk to Vuhledar in eastern Ukraine's Donetsk region, closing in on several strategic towns and cities, the battlefield maps show.

The fierce fighting in the area reflects the Kremlin's long-standing goal of capturing all of the Donetsk region, which it already partly controls. "This is clearly what the Russians are aiming at," said Franz-Stefan Gady, a Vienna-based military analyst. "As a result, this is where the heaviest fighting is happening."

The flurry of activity in eastern Ukraine contrasts with the situation in the Kursk region in western Russia, which Ukrainian forces partly invaded in August. Ukraine's troops made swift gains early in the offensive, some of which were reversed by Russian counterattacks last month. The front line has recently stabilized, with each side making only marginal advances.

The front line near Kharkiv, a major city in Ukraine's east toward which the Russians pushed this spring, has similarly remains unchanged. But the city of Kharkiv itself is regularly battered by Russian strikes. Russian attacks Tuesday killed at least two civilians, according to local officials.

Russia remains far from capturing the entire Donetsk region. As of now, it controls about two-thirds of the area. To seize the remaining third, it would need to break through several Ukrainian defensive lines of trenches and antitank ditches, and battle its way through densely populated urban centers — a grueling fight that U.S. officials believe the Russian army cannot successfully wage in the short term.

Still, the slow but steady advance of Russian troops in the Donetsk region since the beginning of the year has enabled the Kremlin to capture or threaten several Ukrainian bastions that hold the keys to Ukraine's defense of the area, because they are densely fortified and located on advantageous terrain like high ground.

These gains have positioned Moscow favorably, giving it the potential to fully seize the region in the future, military analysts say.

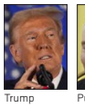
The fall of the hilltop city of Toretsk, for example, would allow Moscow to advance on a critical highway connecting several cities that form Ukraine's main defense belt in the part of the Donetsk region it still controls.

'WAR'

Woodward book reveals Trump's calls with Putin

Also Biden's private remarks on Obama and Netanyahu

By Michelle L. Price and Meg Kinnard
The Associated Press



Trump

Putin

WASHINGTON » Donald Trump has had as many as seven private phone calls with Vladimir Putin since leaving office and secretly sent the Russian president COVID-19 test machines during the height of the pandemic, Bob Woodward reported in his new book, "War."

The revelations were made in the famed Watergate reporter's latest book, which also details President Joe Biden's frustrations with Israeli Prime Minister Benjamin Netanyahu and Saudi Crown Prince Mohammed bin Salman 's assortment of burner phones. The Associated Press obtained an early copy of the book, which is due out next week.

Trump denied the reporting in an interview with ABC News' Jonathan Karl. "He's a storyteller. A bad one. And he's lost his marbles," Trump said of Woodward.

Trump had previously spoken to Woodward for the journalist's 2021 book, "Rage." Trump later sued over it, claiming Woodward never had permission to publicly release recordings of their interviews for the book. The publisher and Woodward denied his allegations.

Here is more from the new book:

Trump has had multiple calls with Putin since his White House term ended.

Woodward reports that Trump asked an aide to leave his office at his Florida resort, Mar-a-Lago, so that the former president could have a private call with Putin in early 2024. The aide, whom Woodward doesn't name, said there have been multiple calls between Trump and Putin since Trump left office, perhaps as many as seven, according to the book, though it does not detail what they discussed.

Steven Cheung, Trump's communications director, said none of the stories in Woodward's books are true. In a statement on Tuesday, he called them "the work of a truly demented and deranged man who suffers from a debilitating case of Trump Derangement Syndrome."

U.S. intelligence agencies later determined that Russia had meddled in the 2016 election to help Trump, though an investigation by special counsel Robert Mueller found no conspiracy between the Trump team and Russia. In 2018, Trump publicly questioned that finding following an in-person meeting with Putin in Helsinki.

In recent years, Trump has criticized U.S. support for Ukraine as it fights off Russia's invasion. He has said Ukraine should have made concessions to Putin before Russia invaded in 2022. He also previously touted his good relationship with Putin and called the Russian leader "pretty smart" for invading Ukraine.

▪ Trump sent COVID-19 test machines to Putin for his personal use

Woodward reports that Trump sent Putin COVID-19 test machines for his personal use as the virus began spreading in 2020.

Putin told Trump not to tell anyone because people would be mad at Trump over it, but Trump said he didn't care if anyone knew, according to the book. Trump ended up agreeing not to tell anyone.

The book also details Biden's complicated relationship with Netanyahu as well as private moments when the president has been fed up with him over the Israel-Hamas war.

Biden's "frustrations and distrust" of Netanyahu "erupted" this past spring, Woodward writes. The president privately unleashed a profanity-laden tirade, calling him a "son of a bitch" and a "bad f guy," according to the book. Biden said he felt, in Woodward's accounting, that Netanyahu "had been lying to him regularly."

▪ Biden criticized Obama's handling of the Russian invasion of Crimea.

The book details Biden's criticism late last year of President Barack Obama's handling of Putin's earlier invasion of Ukraine, when Russia seized Crimea and a section of the Donbas in 2014, at a time when Biden was serving as the Democrat's vice president.

"They f---- up in 2014," Woodward wrote that Biden said to a close friend in December, blaming the lack of action for Putin's actions in Ukraine. "Barack never took Putin seriously."

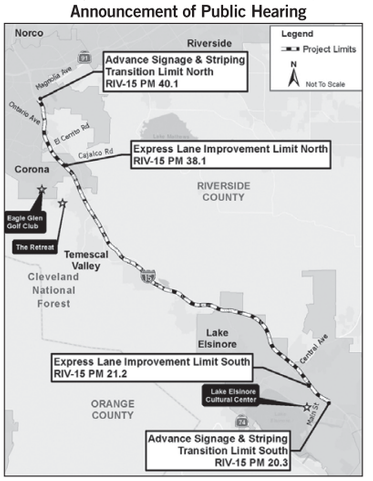
Biden was angry while speaking to the friend and said they "never should have let Putin just walk in there" in 2014.

PUBLIC NOTICE

Caltrans RCTC

Draft Environmental Impact Report/Environmental Assessment available for Interstate 15 Express Lanes Project Southern Extension (ELPSE)

Announcement of Public Hearing



WHAT'S BEING PLANNED?

The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (CALTRANS), is proposing to extend the tolled express lanes in both directions along Interstate (I) 15 in Riverside County between the cities of Lake Elsinore and Corona. RCTC is the local Project sponsor and CALTRANS is the lead agency under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). RCTC and CALTRANS have conducted preliminary engineering and environmental studies to support the Environmental Impact Report and Environmental Assessment (EIR/EA) for the proposed I-15 Express Lanes Project Southern Extension (Project). The Project is intended to improve and manage traffic operations, congestion, and travel times along the corridor by extending the I-15 Express Lanes an additional 15.8 miles. The proposed improvements would extend from El Cerrito Road in Corona, through Temescal Valley, to State Route (SR-) 74 (Central Avenue) in Lake Elsinore. The Project would also add southbound auxiliary lanes between both the Main Street (post mile [PM] 21.2) Off-Ramp and SR-74 (Central Avenue) On-Ramp (approximately 0.75 mile), and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (PM 23.9) (approximately 1 mile). Other Project features include widening 15 bridges, creating multiple express lane access points, and constructing potential noise barriers, retaining walls, drainage systems, electronic toll collection equipment, ramp meters, and signage that would be located within the Project limits between PM 20.3 and PM 40.1.

This Project, as currently proposed, is included in the Southern California Association of Governments (SCAG) 2023 Federal Transportation Improvement Program (FTIP) under the Project's FTIP ID, RIV170901 (Amendment #23-16) and fiscally constrained. The Project is also included in the SCAG 2024-2050 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) Project List under its RTP ID 3160001 and the Project's FTIP ID. According to the FTIP, the Project cost is estimated to be $668 million and is proposed to be funded by local agency funds.

Construction activities are anticipated to commence in 2026 and be completed by 2030. Construction is planned to last approximately 36 months.

WHY THIS AD?

CALTRANS has studied the effects this Project may have on the environment. Our studies show it will significantly affect the quality of the environment. The Draft EIR/EA explains why. This notice is to inform you of the preparation of the Draft EIR/EA and of its availability for you to read. A hearing will be held to give you an opportunity to talk about certain design features of the Project with CALTRANS staff before the final design is selected. The tentative schedule for construction will be discussed.

Air Quality Conformity
Air Quality Conformity requirements apply only in nonattainment and "maintenance" (former nonattainment) areas for the National Ambient Air Quality Standards (NAAQS), and only for the specific NAAQS that are or were violated. United States Environmental Protection Agency (USEPA) regulations at 40 Code of Federal Regulations (CFR) 93 govern the conformity process. Conformity requirements do not apply in unclassifiable/attainment areas for NAAQS and do not apply at all for State standards regardless of the status of the area. The Project is in an area that is extreme nonattainment for the 8-hour ozone (O3), serious nonattainment for particles of 2.5 micrometers or smaller (PM2.5), and attainment-maintenance for carbon monoxide (CO), particles of 10 micrometers or smaller (PM10), and nitrogen dioxide (NO2). Therefore, a Project-level air quality conformity analysis was required. The Draft EIR/EA explains the air quality conformity findings.

Not a Project of Air Quality Concern (POAQC).
The Project-level conformity analysis shows that the Project will conform to the State Implementation Plan, including localized impact analysis with interagency consultation for particulate matter (PM10 and PM2.5) and CO required by 40 CFR 93.116 and 93.123. This Project is not considered a Project of Air Quality Concern regarding particulate matter (PM10 and PM2.5) as defined in 40 CFR 93.123(b)(1). A detailed PM10 and PM2.5 hot-spot analysis was not completed because Clean Air Act and 40 CFR 93.116 requirements are met without an explicit hot-spot analysis. The Project comes from a conforming RTP and Transportation Improvement Program (TIP). Comments are requested regarding the Project-level conformity analysis. On September 28, 2021, the Transportation Conformity Working Group (which includes federal [USEPA and Federal Highway Administration], State [California Air Resources Board and CALTRANS], regional [air quality management districts and SCAG], and sub-regional [county transportation commissions] agencies and other stakeholders) confirmed that the proposed I-15 ELPSE is not a POAQC.

WHAT'S AVAILABLE?

You can look at or obtain the Draft EIR/EA at the CALTRANS District Office (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) on weekdays from 8:00 a.m. to 5:00 p.m. and at the RCTC office (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) Monday through Thursday from 8:00 a.m. to 5:00 p.m. Maps and other information are also available. There are also copies of the Draft EIR/EA available at:

City of Lake Elsinore
130 South Main Street
Lake Elsinore, CA 92530
Available for review:
- Monday through Thursday from 8:00 a.m. to 5:00 p.m.
- Friday from 8:00 a.m. to 4:00 p.m.
- Closed on holidays

Please call the city of Lake Elsinore at (951) 674-3124 to confirm availability of hard copies for review.

Lake Elsinore Library
600 West Graham
Lake Elsinore, CA 92530
Available for review:
- Monday, Wednesday, and Thursday from 10:00 a.m. to 6:00 p.m.
- Tuesday from 11:00 a.m. to 7:00 p.m.
- Friday from 10:00 a.m. to 5:00 p.m.
- Saturday from 10:00 a.m. to 2:00 p.m.
- Closed on holidays

Please call the Lake Elsinore Library at (951) 674-4517 to confirm availa-bility of hard copies for review.

Corona Public Library
650 South Main Street
Corona, CA 92882
Available for review:
- Monday through Thursday from 10:00 a.m. to 8:00 p.m.
- Friday from 10:00 a.m. to 6:00 p.m.
- Saturday from 1:00 p.m. to 5 p.m.
- Closed on holidays

Please call the Corona Public Library at (951) 736-2381 to confirm availability of hard copies for review.

Additional project information may be downloaded from RCTC's website at:
https://www.rctc.org/projects/i15-express-southern-extension/

WHERE YOU COME IN

Have the potential impacts been addressed? Do you have information that should be included? Your comments will be part of the public record. If you wish to make a comment on the Draft EIR/EA, you may submit your written comments until November 26, 2024, to RCTC.

Jeff Dietzler, Capital Projects Manager (Tolling)
Riverside County Transportation Commission
4080 Lemon Street, Third Floor
P.O.Box 12008
Riverside, CA 92501
or via email to: 15projectsouth@rctc.org

Please use **"Interstate 15 Express Lanes Project Southern Extension"** in the subject line.

Public hearings will be held on Tuesday, October 22, 2024; Wednesday, October 23, 2024; and Tuesday, October 29, 2024, to discuss the Project. The time and place will be announced in local newspapers.

4-way stop at busy Murrieta intersection discussed by Murrieta City Council

Tony Ault
Staff Writer

The Murrieta City Council with a light meeting agenda, Tuesday, Oct. 2, spent time discussing the placement of a 4-way stop sign at the Jackson Avenue and Magellan Street intersection on the request of the staff.

Bob Moehling, Murrieta City Public Works Director, presented the request to place the all-way stop at the intersection because more traffic has been seen on the busy highway, and the line of sight on that portion of the roadway has been reduced by growing trees and vegetation creating a traffic hazard. He said the proposal is not new and went over the Jackson Avenue changes that have taken place.

He said the staff is recommending the all-way stop be constructed to mitigate the traffic problems and at less cost than other options. However, the staff offered three other alternatives to the request. They included: removing all vegetation from the sight distance corridor; installing a traffic signal or just leaving it as it is.

Each of the four options was discussed with the council at some length. The council questioned the number of vehicles passing that intersection that is adjacent to a housing tract on the east and a major retail business on the west. More than 10,000 cars a day going north and south now pass through that intersection.

The possibility that by removing or cutting the trees and vegetation on that portion of the roadway would help improve the line of sight now hindered by the growth was discussed. It was determined that could be possible with the permission of the HOA in the housing tract, but the cost of making that removal might be expensive, but not as much as a traffic signal.

The public works staff showed detailed information on how each of the options might work with more questions coming from the council. A proposal to keep clear signs at the intersection was advanced and if it would be difficult to request the HOA remove the vegetation.

Finally, a motion was made by Councilmember Ron Holliday to approve option two and talk to the HOA about the vegetation removal, adding a "keep clear" before the current stop signs and to report back to the council with the result. It was seconded by Mayor Lori Stone. In the vote, Stone, Holliday and Councilmember Lisa DeForest voted yes while Councilmember Jon Levell and Mayor Pro Tem Cindy Warren voted no. The measure passed.

In an earlier portion of the council meeting, Murrieta City Clerk Cristal McDonald outlined her and the registered voters' responsibilities in voting in the November 5 general and municipal election.

She explained that Murrieta registered voters will soon receive their ballots for both the General election for President and Vice President and a number of state Propositions but a municipal election will include voting to fill two city council seats for the next four years.

The Municipal Vote includes candidates for Murrieta Council seats for Districts 3 and 4. District 3 candidates include Lisa DeForest (incumbent), and John Nakagawa. District 4 candidates include Lori Stone (incumbent), Frank Madrid and Javier Rubalcaba.

McDonald reminded potential voters aged 16 and 17 in California that they can now pre register to vote and be eligible to actually vote after their 18th birthday while adult voters have until Oct. 21 to register. Voting in person at their designed precincts may begin on Oct. 26 if they wish. They have through Nov. 5 to make or mail in their voting choices. Those ballots mailed on or before Nov. 5 will be counted in the 2024 election.

She said she was more than willing to further explain the election process to residents but is not allowed to discuss issues or candidates with them. "I must remain neutral," McDonald said. She gave the Murrieta city clerk's number as 951-461-6030.

Off agenda items were presented to the council by several residents during the public comment session. One Bear Creek resident asked the city code enforcement and fire department to look into the growing trash and debris in a control basin in their private community and another argued the placement of a new Murrieta Valley School District school planned on Hayes Street in the community.

During the public comment session on the all-way stop on Jackson and Magellan, resident Kassen Klein said the issue should be discussed in a public meeting or hearing before any action is taken by the council.

The Murrieta Council proclaimed the month of October as Domestic Violence Awareness Month and Breast Cancer Awareness Month. They recognized the effort in the city to forward the "We are More Than Pink Day" coming to the city on Oct. 15 with more than 4,000 expected to participate, including members of the city council and city staff.

RivCo Flood Control and Water Conservation District seeks public input for 5-year Capital Improvement Plan

RIVERSIDE COUNTY - The Riverside County Flood Control and Water Conservation District (District) is launching its annual update of the 5-year Capital Improvement Plan (CIP) and invites the public to participate in shaping the future of flood control and water conservation projects in their communities.

Community members are encouraged to submit project requests to help the District understand, prioritize, and allocate funding for essential infrastructure improvements. To propose a project, please follow the instructions under "Request a Project" on the District's website at rcflood.org/cip.

All project requests must be submitted by Friday, Oct. 18.

Additionally, residents are welcome to attend the Public Hearing for their respective Zone. The latest schedule and information on these Hearings is available on the District's CIP webpage.

For more information or if you have questions about the CIP or the hearing process, please contact Toni Irvin at 951-955-1612.

The District values community input and looks forward to collaborating on important flood control and water conservation initiatives.

Submitted by Riverside County Flood Control.

PUBLIC NOTICE

Draft Environmental Impact Report/Environmental Assessment available for Interstate 15 Express Lanes Project Southern Extension (ELPSE)

Announcement of Public Hearing

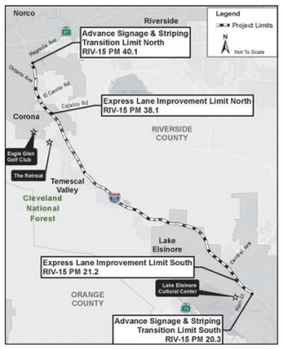
RCTC

WHAT'S BEING PLANNED?

The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (CALTRANS), is proposing to extend the tolled express lanes in both directions along Interstate (I) 15 in Riverside County between the cities of Lake Elsinore and Corona. RCTC is the local Project sponsor and CALTRANS is the lead agency under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). RCTC and CALTRANS have conducted preliminary engineering and environmental studies to support the Environmental Impact Report and Environmental Assessment (EIR/EA) for the proposed I-15 Express Lanes Project Southern Extension (Project). The Project is intended to improve and manage traffic operations, congestion, and travel times along the corridor by extending the I-15 Express Lanes an additional 15.8 miles. The proposed improvements would extend from El Cerrito Road in Corona, through Temescal Valley, to State Route (SR-) 74 (Central Avenue) in Lake Elsinore. The Project would also add southbound auxiliary lanes between both the Main Street (post mile [PM] 21.2) Off-Ramp and SR-74 (Central Avenue) On-Ramp (approximately 0.75 mile), and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (PM 23.9) (approximately 1 mile). Other Project features include widening 15 bridges, creating multiple express lane access points, and constructing potential noise barriers, retaining walls, drainage systems, electronic toll collection equipment, ramp meters, and signage that would be located within the Project limits between PM 20.3 and PM 40.1.

This Project, as currently proposed, is included in the Southern California Association of Governments (SCAG) 2023 Federal Transportation Improvement Program (FTIP) under the Project's FTIP ID, RIV170901 (Amendment #23-16) and fiscally constrained. The Project is also included in the SCAG 2024–2050 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) Project List under its RTP ID 3160001 and the Project's FTIP ID. According to the FTIP, the Project cost is estimated to be $668 million and is proposed to be funded by local agency funds.

Construction activities are anticipated to commence in 2026 and be completed by 2030. Construction is planned to last approximately 36 months.



WHY THIS AD?

CALTRANS has studied the effects this Project may have on the environment. Our studies show it will significantly affect the quality of the environment. The Draft EIR/EA explains why. This notice is to inform you of the preparation of the Draft EIR/EA and of its availability for you to read. A hearing will be held to give you an opportunity to talk about certain design features of the Project with CALTRANS staff before the final design is selected. The tentative schedule for construction will be discussed.

Air Quality Conformity

Air Quality Conformity requirements apply only in nonattainment and "maintenance" (former nonattainment) areas for the National Ambient Air Quality Standards (NAAQS), and only for the specific NAAQS that are or were violated. United States Environmental Protection Agency (USEPA) regulations at 40 Code of Federal Regulations (CFR) 93 govern the conformity process. Conformity requirements do not apply in unclassifiable/attainment areas for NAAQS and do not apply at all for State standards regardless of the status of the area. The Project is in an area that is extreme nonattainment for the 8-hour ozone (O3), serious nonattainment for particles of 2.5 micrometers or smaller (PM2.5), and attainment-maintenance for carbon monoxide (CO), particles of 10 micrometers or smaller (PM10), and nitrogen dioxide (NO2). Therefore, a Project-level air quality conformity analysis was required. The Draft EIR/EA explains the air quality conformity findings.

Not a Project of Air Quality Concern (POAQC).

The Project-level conformity analysis shows that the Project will conform to the State Implementation Plan, including localized impact analysis with interagency consultation for particulate matter (PM10 and PM2.5) and CO required by 40 CFR 93.116 and 93.123. This Project is not considered a Project of Air Quality Concern regarding particulate matter (PM10 and PM2.5) as defined in 40 CFR 93.123(b)(1). A detailed PM10 and PM2.5 hot-spot analysis was not completed because Clean Air Act and 40 CFR 93.116 requirements are met without an explicit hot-spot analysis. The Project comes from a conforming RTP and Transportation Improvement Program (TIP). Comments are requested regarding the Project-level conformity analysis. On September 28, 2021, the Transportation Conformity Working Group (which includes federal [USEPA and Federal Highway Administration], State [California Air Resources Board and CALTRANS], regional [air quality management districts and SCAG], and sub-regional [county transportation commissions] agencies and other stakeholders) confirmed that the proposed I-15 ELPSE is not a POAQC.

WHAT'S AVAILABLE?

You can look at or obtain the Draft EIR/EA at the CALTRANS District Office (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) on weekdays from 8:00 a.m. to 5:00 p.m. and at the RCTC office (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) Monday through Thursday from 8:00 a.m. to 5:00 p.m. Maps and other information are also available. There are also copies of the Draft EIR/EA available at:

City of Lake Elsinore
130 South Main Street, Lake Elsinore, CA 92530

Available for review:
- Monday through Thursday from 8:00 a.m. to 5:00 p.m.
- Friday from 8:00 a.m. to 4:00 p.m.
- Closed on holidays

Please call the city of Lake Elsinore at (951) 674-3124 to confirm availability of hard copies for review.

Lake Elsinore Library
600 West Graham, Lake Elsinore, CA 92530

Available for review:
- Monday, Wednesday, and Thursday from 10:00 a.m. to 6:00 p.m.
- Tuesday from 11:00 a.m. to 7:00 p.m.
- Friday from 10:00 a.m. to 5:00 p.m.
- Saturday from 10:00 a.m. to 2:00 p.m.
- Closed on holidays

Please call the Lake Elsinore Library at (951) 674-4517 to confirm availa-bility of hard copies for review.

Corona Public Library
650 South Main Street, Corona, CA 92882

Available for review:
- Monday through Thursday from 10:00 a.m. to 8:00 p.m.
- Friday from 10:00 a.m. to 6:00 p.m.
- Saturday from 1:00 p.m. to 5 p.m.
- Closed on holidays

Please call the Corona Public Library at (951) 736-2381 to confirm availability of hard copies for review.

Additional project information may be downloaded from RCTC's website at: https://www.rctc.org/projects/i15-express-southern-extension/

WHERE YOU COME IN

Have the potential impacts been addressed? Do you have information that should be included? Your comments will be part of the public record. If you wish to make a comment on the Draft EIR/EA, you may submit your written comments until November 26, 2024, to RCTC.

Jeff Dietzler, Capital Projects Manager (Tolling)
Riverside County Transportation Commission
4080 Lemon Street, Third Floor
P.O.Box 12008
Riverside, CA 92501

or via email to: 15projectsouth@rctc.org

Please use **"Interstate 15 Express Lanes Project Southern Extension"** in the subject line.

Public hearings will be held on Tuesday, October 22, 2024; Wednesday, October 23, 2024; and Tuesday, October 29, 2024, to discuss the Project. The time and place will be announced in local newspapers.

WHEN AND WHERE

Temescal Valley
Date: Tues., Oct. 22, 2024
Time: 6 p.m. - 8 p.m.
Place: The Retreat
Address: 8007 Soft Winds Drive
Corona, 92883

Lake Elsinore
Date: Wed., Oct. 23, 2024
Time: 6 p.m. - 8 p.m.
Place: Lake Elsinore Cultural Ctr.
Address: 183 N. Main Street
Lake Elsinore, 92530

Corona
Date: Thurs., Oct. 29, 2024
Time: 6 p.m. - 8 p.m.
Place: Eagle Glen Golf Club
Address: 1800 Eagle Glen Pkwy.
Corona, 92883

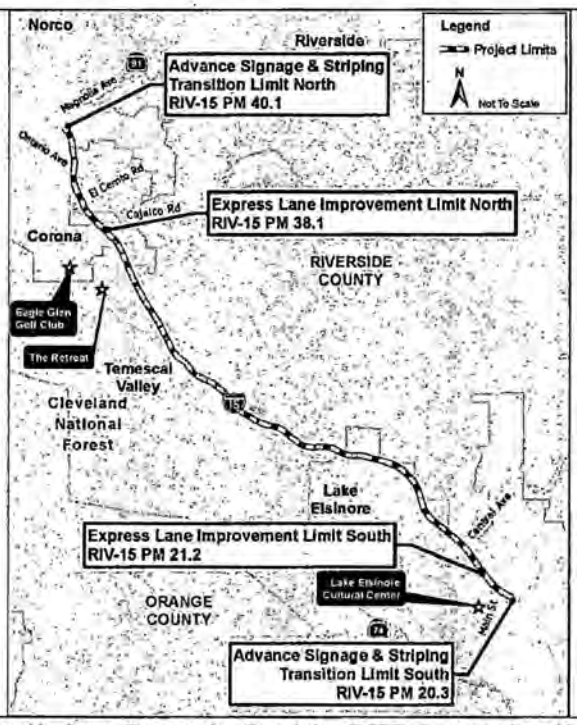
PUBLIC NOTICE

Draft Environmental Impact Report/Environmental Assessment available for Interstate 15 Express Lanes Project Southern Extension (ELPSE)

Announcement of Public Hearing



WHAT IS BEING PLANNED?	The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (CALTRANS), is proposing to extend the tolled express lanes in both directions along Interstate (I-) 15 in Riverside County between the cities of Lake Elsinore and Corona. RCTC is the local Project sponsor and CALTRANS is the lead agency under the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA). RCTC and CALTRANS have conducted preliminary engineering and environmental studies to support the Environmental Impact Report and Environmental Assessment (EIR/EA) for the proposed I-15 Express Lanes Project Southern Extension (Project). The Project is intended to improve and manage traffic operations, congestion, and travel times along the corridor by extending the I-15 Express Lanes an additional 15.8 miles. The proposed improvements would extend from El Cerrito Road in Corona, through Temescal Valley, to State Route (SR-) 74 (Central Avenue) in Lake Elsinore. The Project would also add southbound auxiliary lanes between both the Main Street (post mile [PM] 21.2) Off-Ramp and SR-74 (Central Avenue) On-Ramp (approximately 0.75 mile), and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (PM 23.9) (approximately 1 mile). Other Project features include widening 15 bridges, creating multiple express lane access points, and constructing potential noise barriers, retaining walls, drainage systems, electronic toll collection equipment, ramp meters, and signage that would be located within the Project limits between PM 20.3 and PM 40.1. This Project, as currently proposed, is included in the Southern California Association of Governments (SCAG) 2023 Federal Transportation Improvement Program (FTIP) under the Project's FTIP ID, RIV170901 (Amendment #23-16) and fiscally constrained. The Project is also included in the SCAG 2024–2050 Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS) Project List under its RTP ID 3160001 and the Project's FTIP ID. According to the FTIP, the Project cost is estimated to be $668 million and is proposed to be funded by local agency funds. Construction activities are anticipated to commence in 2026 and be completed by 2030. Construction is planned to last approximately 36 months.
WHY THIS AD?	CALTRANS has studied the effects this Project may have on the environment. Our studies show it will significantly affect the quality of the environment. The Draft EIR/EA explains why. This notice is to inform you of the preparation of the Draft EIR/EA and of its availability for you to read. A hearing will be held to give you an opportunity to talk about certain design features of the Project with CALTRANS staff before the final design is selected. The tentative schedule for construction will be discussed. **Air Quality Conformity** Air Quality Conformity requirements apply only in nonattainment and "maintenance" (former nonattainment) areas for the National Ambient Air Quality Standards (NAAQS), and only for the specific NAAQS that are or were violated. United States Environmental Protection Agency (USEPA) regulations at 40 Code of Federal Regulations (CFR) 93 govern the conformity process. Conformity requirements do not apply in unclassifiable/attainment areas for NAAQS and do not apply at all for State standards regardless of the status of the area. The Project is in an area that is extreme nonattainment for the 8-hour ozone (O_3), serious nonattainment for particles of 2.5 micrometers or smaller ($PM_{2.5}$), and attainment-maintenance for carbon monoxide (CO), particles of 10 micrometers or smaller (PM_{10}), and nitrogen dioxide (NO_2). Therefore, a Project-level air quality conformity analysis was required. The Draft EIR/EA explains the air quality conformity findings. Not a Project of Air Quality Concern (POAQC). The Project-level conformity analysis shows that the Project will conform to the State Implementation Plan, including localized impact analysis with interagency consultation for particulate matter (PM_{10} and $PM_{2.5}$) and CO required by 40 CFR 93.116 and 93.123. This Project is not considered a Project of Air Quality Concern regarding particulate matter (PM_{10} and $PM_{2.5}$) as defined in 40 CFR 93.123(b)(1). A detailed PM_{10} and $PM_{2.5}$ hot-spot analysis was not completed because Clean Air Act and 40 CFR 93.116 requirements are met without an explicit hot-spot analysis. The Project comes from a conforming RTP and Transportation Improvement Program (TIP). Comments are requested regarding the Project-

	level conformity analysis. On September 28, 2021, the Transportation Conformity Working Group (which includes federal [USEPA and Federal Highway Administration], State [California Air Resources Board and CALTRANS], regional [air quality management districts and SCAG], and sub-regional [county transportation commissions] agencies and other stakeholders) confirmed that the proposed I-15 ELPSE is not a POAQC.
WHAT'S AVAILABLE?	You can look at or obtain the Draft EIR/EA at the CALTRANS District Office (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) on weekdays from 8:00 a.m. to 5:00 p.m. and at the RCTC office (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) Monday through Thursday from 8:00 a.m. to 5:00 p.m. Maps and other information are also available. There are also copies of the Draft EIR/EA available at: City of Lake Elsinore 130 South Main Street Lake Elsinore, CA 92530 Available for review: • Monday through Thursday from 8:00 a.m. to 5:00 p.m. • Friday from 8:00 a.m. to 4:00 p.m. • Closed on holidays Please call the city of Lake Elsinore at (951) 674-3124 to confirm availability of hard copies for review. Lake Elsinore Library 600 West Graham Lake Elsinore, CA 92530 Available for review: • Monday, Wednesday, and Thursday from 10:00 a.m. to 6:00 p.m. • Tuesday from 11:00 a.m. to 7:00 p.m. • Friday from 10:00 a.m. to 5:00 p.m. • Saturday from 10:00 a.m. to 2:00 p.m. • Closed on holidays Please call the Lake Elsinore Library at (951) 674-4517 to confirm availability of hard copies for review. Aviso Público

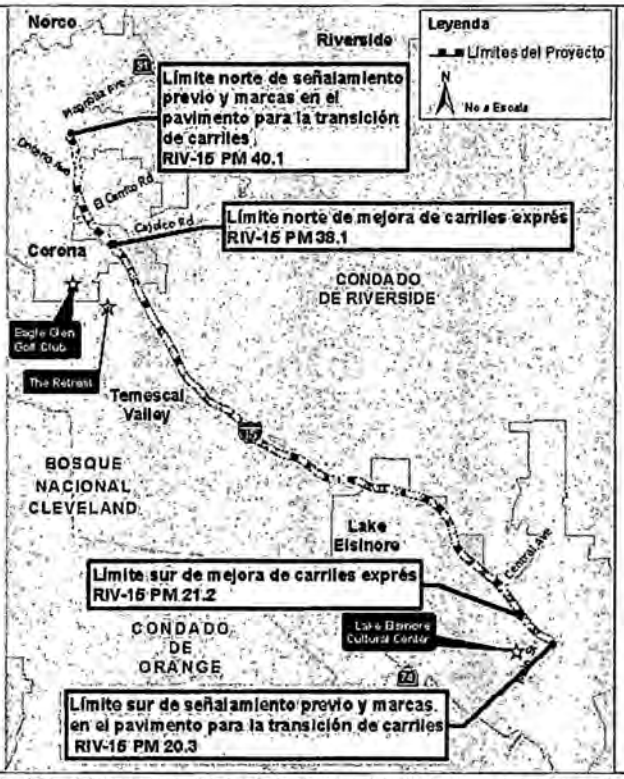
Reporte de Impacto Ambiental y Evaluación Ambiental disponibles para el Proyecto de Extensión de los Carriles Exprés en el Segmento Sur de la Autopista Interestatal 15 (Conocido como I-15 Express Lanes Project Southern Extension o por las siglas ELPSE en inglés)

Anuncio de Audiencia Pública



¿Qué Se Planifica?

La Comisión del Transporte del Condado de Riverside (RCTC por sus siglas en inglés) en cooperación con el Departamento de Transporte de California (CALTRANS por sus siglas en inglés), proponen extender los carriles exprés con peaje en ambas direcciones a lo largo de la interestatal 15 en el condado de Riverside, entre las ciudades de Lake Elsinore y Corona. RCTC es el patrocinador local del proyecto y CALTRANS es la agencia principal bajo el Acta de Calidad del Medio Ambiente de California (CEQA por sus siglas en inglés) y el Acta de Póliza Nacional del Medio Ambiente (NEPA por sus siglas en inglés). RCTC y CALTRANS han llevado a cabo estudios preliminares de ingeniería y medio ambiente para redactar el Reporte de Impacto Ambiental y de Evaluación Ambiental (EIR/EA por sus siglas en inglés) para la propuesta de Extensión de los Carriles Exprés en el segmento Sur de la Autopista Interestatal 15 (proyecto). El proyecto tiene por objetivo mejorar y gestionar las operaciones de tráfico, la congestión, y los tiempos de viaje a lo largo del corredor mediante la extensión de los Carriles Exprés de la Autopsita I-15 por una distancia adicional de 15.8 millas. Las mejoras que se proponen se extenderían desde El Cerrito Road en Corona, a través de Temescal Valley, hasta la Carretera 74 (Central Avenue) en Lake Elsinore. El proyecto también añadiría carriles auxiliares en la dirección sur entre la rampa de salida de Main Street (poste de milla [PM por sus siglas en inglés] 21.2) y la rampa de entrada de la Carretera 74 (Central Avenue) (aproximadamente 0.75 millas), y entre la rampa de salida de la Carretera 74 (Central Avenue) y la rampa de entrada de Nichols Road (PM 23.9) (aproximadamente 1 milla). Otras características del proyecto incluyen la ampliación de 15 puentes, la creación de múltiples puntos de acceso a los carriles exprés, y la posible construcción de barreras acústicas, muros de contención, sistemas de drenaje, equipos electrónicos para el cobro de peaje, semáforos en las rampas de entrada, y señalamientos que se ubicarían dentro de los límites del proyecto entre el PM 20.3 y PM 40.1.

Este proyecto, tal como se propone actualmente, está incluido en el Programa Federal de Mejora del Transporte (FTIP por sus siglas en inglés) 2023 de la Asociación de Gobiernos del Sur de California (SCAG por sus siglas en inglés) bajo el número de identificación FTIP del proyecto, RIV170901 (Enmienda #23-16) y fiscalmente restringido. El proyecto también está incluido en la Lista de Proyectos del Plan de Transporte Regional (RTP por sus siglas en inglés) /Estrategia de Comunidades Sustentables (SCS por sus siglas en inglés) del SCAG 2024-2050 bajo el número de identificación RTP 3160001 en conjunto con el número de identificación FTIP del proyecto. De acuerdo con el FTIP, el costo del proyecto se estima en $668 millones de dólares y se propone que sea financiado con fondos de la agencia local.

Se anticipa que las actividades de construcción comenzarán en el 2026 y serán completadas en el 2030. Se planea que la construcción tendrá una duración aproximada de 36 meses.

¿Por Qué Este Aviso?

CALTRANS ha estudiado los efectos que este proyecto podría tener sobre el medio ambiente. Nuestros estudios demuestran que afectará significativamente la calidad del medio ambiente. El documento preliminar del EIR/EA explica por qué. Este anuncio es para informarle sobre la preparación del documento preliminar del EIR/EA y de la disponibilidad de este para su lectura. Se llevará a cabo una reunión a puertas abiertas para darle la oportunidad de discutir ciertas características del diseño del proyecto con el personal de CALTRANS antes de que se seleccione el diseño final. También se discutirá el cronograma tentativo de la construcción.

Conformidad de la Calidad del Aire

Los requisitos de conformidad de la calidad del aire sólo se aplican en zonas de incumplimiento y de "mantenimiento" (anteriormente de incumplimiento) de los Estándares Nacionales de la Calidad del Aire Ambiental (NAAQS por sus siglas en inglés), y solo para los NAAQS específicos que son o han sido incumplidos. Las regulaciones de la Agencia de Protección Ambiental de Estados Unidos (USEPA por sus siglas en inglés) del 40 del Código de Reglamentos Federales (CFR por sus siglas en inglés) 93 rigen el proceso de conformidad. Los requisitos de conformidad no se aplican en las zonas inclasificables/de cumplimiento de los NAAQS y no se aplican en absoluto a los estándares

	estatales, independientemente de la situación de la zona. El proyecto está en una zona de incumplimiento extremo por ozono (O_3) de 8 horas, y de incumplimiento grave por partículas de 2.5 micrómetros o menos ($PM_{2.5}$), y de cumplimiento-mantenimiento por el monóxido de carbono (CO), partículas de 10 micrómetros o menos (PM_{10}), y el dióxido de nitrógeno (NO_2). Por lo tanto, fue necesario un análisis de conformidad de la calidad del aire a nivel proyecto. El documento preliminar del EIR/EA explica las conclusiones sobre la conformidad de la calidad del aire. No es un Proyecto de Preocupación por la Calidad del Aire (POAQC por sus siglas en inglés). El análisis de conformidad a nivel proyecto muestra que el proyecto se ajustará al Plan de Implementación Estatal, incluyendo el análisis de impacto localizado con consulta entre agencias para partículas materiales (PM_{10} and $PM_{2.5}$) y CO requerido por el 40 CFR 93.116 y 93.123. Este proyecto no se considera un proyecto de detrimento a la calidad del aire en relación con las partículas materiales (PM_{10} and $PM_{2.5}$) como se define en el 40 CFR 93.123(b)(1). No se realizó un análisis detallado de los puntos críticos de PM_{10} and $PM_{2.5}$ debido a que los requisitos de la Ley de Aire Limpio y del 40 CFR 93.116 se cumplen sin la necesidad de hacer un análisis a fondo de los puntos críticos. El proyecto está incluido en el RTP y en el Programa de Mejora del Transporte (TIP por sus siglas en inglés) autorizados. Se solicitan sus comentarios sobre el análisis de conformidad que se realizó a nivel proyecto. El 28 de septiembre del 2021, el Grupo de Trabajo de Conformidad del Transporte (TCWG por sus siglas en inglés) (el cual incluye agencias federales [USEPA y la Administración Federal de Carreteras (FHWA, por sus siglas en inglés), estatales [Junta de Recursos del Aire de California y CALTRANS], regionales [distritos de gestión de la calidad del aire y SCAG], y subregionales [comisiones de transporte del condado] agencias y otras partes interesadas) confirmó que el proyecto I-15 ELPSE propuesto no es un POAQC.
¿Qué Material Estará Disponible?	Puede consultar u obtener el documento preliminar del EIR/EA en la Oficina de Distrito de CALTRANS (The Rosa Parks Memorial Building, 464 West 4th Street, San Bernardino, CA 92401) en días laborales de 8:00 a.m. a 5:00 p.m. y en la oficina de RCTC (4080 Lemon Street, 3rd Floor, Riverside, CA 92501) de lunes a jueves de 8:00 a.m. a 5:00 p.m. Mapas y otra información también están disponibles. También hay copias disponibles del documento preliminar del EIR/EA en los siguientes lugares: City of Lake Elsinore 130 South Main Street Lake Elsinore, CA 92530 Disponible para revisión: • lunes a jueves de 8:00 a.m. a 5:00 p.m. • viernes de 8:00 a.m. a 4:00 p.m. • Cerrado los días festivos Por favor, llame a la ciudad de Lake Elsinore al (951) 674-3124 para confirmar la disponibilidad de copias impresas para su revisión. Lake Elsinore Library 600 West Graham Lake Elsinore, CA 92530 Disponible para su revisión: • lunes, miércoles y jueves de 10:00 a.m. a 6:00 p.m. • martes de 11:00 a.m. a 7:00 p.m. • viernes de 10:00 a.m. a 5:00 p.m. • sábado de 10:00 a.m. a 2:00 p.m. • Cerrado los días festivos Por favor, llame al Lake Elsinore Library al (951) 674-4517 para confirmar la disponibilidad de copias impresas para su revisión. Corona Public Library 650 South Main Street Corona, CA 92882 Disponible para su revisión: • lunes a jueves de 10:00 a.m. a 8:00 p.m. • viernes de 10:00 a.m. a 6:00 p.m. • sábado de 1:00 p.m. a 5 p.m. • Cerrado los días festivos Por favor, llame al Corona Public Library al (951) 736-2381 para confirmar la disponibilidad de copias impresas para su revisión. Puede descargar información adicional sobre el proyecto en el sitio web de RCTC: https://www.rctc.org/es/projects/i15-express-southern-extension/
Otras Formas en que Puede Participar	¿Se han abordado los posibles impactos? ¿Dispone de información que debería incluirse? Sus comentarios serán parte del registro público. Si desea hacer un comentario sobre el documento preliminar del EIR/EA, puede presentar sus comentarios por escrito hasta el 26 de noviembre del 2024, dirigidos a RCTC. Jeff Dietzler, Capital Projects Manager (Tolling) Riverside County Transportation Commission 4080 Lemon Street, Third Floor P.O. Box 12008 Riverside, CA 92501 o por correo electrónico a: 15projectsouth@rctc.org En su mensaje por favor incluya "Interstate 15 Express Lanes Project Southern Extension" en la línea del asunto. Las audiencias públicas a puertas abiertas se llevarán a cabo el martes 22 de octubre del 2024; el miércoles 23 de octubre del 2024; y el martes 29 de octubre del 2024, para discutir el Proyecto. La hora y el lugar se anunciarán en los periódicos locales.
Cuando y Donde	Las audiencias públicas se llevarán a cabo en los siguientes lugares y fechas: **Temescal Valley** The Retreat 8007 Soft Winds Drive Corona, CA 92883 Reunión de información pública se llevará a cabo: • **martes 22 de octubre del 2024** • **De 6 p.m. a 8 p.m.** **Lake Elsinore** Lake Elsinore Cultural Center 183 N Main Street Lake Elsinore, CA 92530 Reunión de información pública se llevará a cabo: • **miércoles 23 de octubre del 2024** • **De 6 p.m. a 8 p.m.** **Corona** Eagle Glen Golf Club 1800 Eagle Glen Parkway Corona, CA 92883 Reunión de información pública se llevará a cabo: • **martes 29 de octubre del 2024** • **De 6 p.m. a 8 p.m.**
Contáctenos	Para más información sobre este estudio, cualquier asunto relacionado con el transporte o para las personas que necesiten documentos en formatos alternativos pueden ponerse en contacto con La Comisión del Transporte del Condado de Riverside (RCTC), Attn: Jeff Dietzler, Capital Projects Manager (Tolling), 4080 Lemon Street, 3rd Floor, Riverside, CA 92502; llamar al (951) 787-7141 (voz); o utilizar el Servicio de Retransmisión de California al (800) 735-2929 (TTY), (800) 735-2929 (voz), o 711. **EA** 08-0J0820 **PN** 08-18000063

4.5 PUBLIC HEARINGS

The Project team hosted three public hearings for the Project. The public hearings were held at the following locations and dates:

Temescal Valley	Lake Elsinore	Corona
The Retreat 8007 Soft Winds Drive Corona, CA 92883 Held on October 22, 2024, from 6 p.m. to 8 p.m.	Lake Elsinore Cultural Center 183 N. Main Street Lake Elsinore, CA 92530 Held on October 23, 2024 from 6 p.m. to 8 p.m.	Eagle Glen Golf Club 1800 Eagle Glen Parkway Corona, CA 92883 Held on October 29, 2024 from 6 p.m. to 8 p.m.

The public hearings included an open-house style format that provided Project informational boards, flyers, and staff at tables available to discuss any aspect of the Project. The boards, flyers, and staff provided an overview of the Project, the methods for submitting public comments, and opportunities to ask questions or express opinions. At each of the three public meetings, a certified court reporter was available to transcribe oral comments from attendees and a professional Spanish interpreter was available to assist the public with Spanish-language needs. A total of 49 participants attended and a total of 14 comments were received through comment cards filled out at the meetings and people who opted to provide oral comments to the certified court reporter available at each of the three meetings.

In addition to the comments received at the public meetings, the following flyer from Save Temescal Valley was handed to a PDT member, although the Projects listed are unrelated to this Project.

SAVE TEMESCAL VALLEY

Is our future warehouses instead of rolling hills?

Traffic today! What will it look like with added warehouse traffic?

No Warehouses in Temescal Valley!

Oppose the Serrano Commerce Center

The Serrano Commerce Center is a proposed **6 million square foot warehouse complex** in Temescal Valley, California, located between Corona and Lake Elsinore. The project will run 1.5 miles parallel to the I-15 Freeway, south of Dawson Canyon Road and east of Temescal Canyon Road. If built, the project would be one of the larger logistics projects in Riverside and San Bernardino counties.

Scan here for cited sources

- **Health Hazards**- Because of diesel truck emissions, residents who live near warehouses make more frequent visits to emergency rooms have higher rates of asthma and heart disease, and even more premature deaths than other residents in the region.
- **Environmental Impact**- Air, Light and Noise Pollution. Destruction of natural beauty.
- **Increased Traffic-** "Warehouses are not standalone buildings; they take in goods and move them out again – mostly with trucks, which burn fuel and clog up streets and highways."

Subject: CEQA comment letter, EIR, I-15 Express Lanes Southern Extension, Temescal Valley and Corona, SCH 2019100381

Good morning Gita,

Please see attached for CDFW's comments on the draft EIR for the Interstate 15 Express Lanes Project Southern Extension in Temescal Valley and Corona (SCH # 2019100381).

Thank you,
Chris

Subject: Draft Environmental Impact Report
Interstate 15 Express Lanes Project Southern Extension (Project)
State Clearinghouse No. 2019100381

Dear Gita Tokhmafshan,

The California Department of Fish and Wildlife (CDFW) received a Draft Environmental Impact Report (DEIR) from the California Department of Transportation (Caltrans), District 8 for the Project pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

A-1.1 Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (*Id.*, § 1802). Similarly, for purposes of CEQA,
A-1.2 CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a **Responsible Agency** under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 et seq.). Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

PROJECT DESCRIPTION SUMMARY

Proponent: Caltrans, District 8

Objective: The objective of the Project is to construct four tolled express lanes in the median of Interstate 15 (I-15). Primary Project activities include vegetation removal, excavation, grading, paving the median, widening up to 15 bridges, construction of drainage systems, and installation of riprap and trash capture devices.

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Location: The Project site is located along 16.9 miles of I-15 adjacent to Temescal Wash and Bedford Wash, from postmile (PM) 21.2 to PM 38.1 in the City of Lake Elsinore, in the unincorporated area of Temescal Valley, and in the City of Corona, County of Riverside.

Timeframe: The Project is proposed to begin construction in the spring of 2027 and to be completed in the fall of 2030.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist Caltrans in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on narrow endemic plants, burrowing owl, Crotch's bumble bee (*Bombus crotchii*), and nesting birds. CDFW requests that Caltrans include in the final EIR the suggested mitigation measures (see Attachment A) offered by CDFW to avoid, minimize, and mitigate Project impacts on California fish and wildlife resources.

The Project occurs within the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) area and is subject to the provisions and policies of the MSHCP. Thus, CDFW has included recommendations regarding the MSHCP to improve the final EIR.

I. Mitigation Measure or Alternative and Related Impact Shortcoming

COMMENT 1: Narrow Endemic Plants

Sections 2.4.3 and 2.4.5, Pages 1185-1254 and 1347-1426

Issue: The Project may impact narrow endemic plant species. CDFW appreciates that focused plant surveys were conducted in the spring and summer of 2020 and 2021 and followed CDFW's Protocols for Surveying and Evaluating Impacts to Special-status Plant Populations and Sensitive Natural Communities (CDFW, 2018). However, CDFW wrote a CEQA comment letter regarding this Project's Notice of Preparation on November 20, 2019, pointing out that CDFW generally considers assessments for rare plants valid for a period of up to three years. Considering that the Project is anticipated to begin in 2027, the plant surveys should be repeated no more than three years before the Project starts to identify plant species present.

A-1.3

Specific impact: Portions of the Project site fall within the MSHCP Narrow Endemic Plant Species Survey Areas (Section 6.1.3) and in a Criteria Area Plant Species Survey Area (Section 6.3.2). These areas have the potential to support narrow endemic plant species, including Munz's onion (*Allium munzii*), San Diego ambrosia (*Ambrosia pumila*), slender-horned spineflower (*Dodecahema leptoceras*), many-stemmed dudleya (*Dudleya multicaulis*), spreading navarretia (*Navarretia fossalis*), California orcutt grass (*Orcuttia californica*), San Miguel savory (*Clinopodium chandleri*), Hammitt's clay-cress (*Sibaropsis hammittii*), Wright's trichocoronis (*Trichocoronis wrightii* var. *wrightii*), and Brand's phacelia (*Phacelia stellaris*), as well as criteria area plant species, including thread-leaved brodiaea (*Brodiaea filifolia*), Davidson's saltscale (*Atriplex serenana* var. *davidsonii*), Parish's saltscale (*Atriplex parishii*), round-leaved filaree (*California macrophylla*), smooth tarplant (*Centromadia pungens*), Coulter's goldfields (*Lasthenia glabrata* ssp. *coulteri*), and little mousetail (*Myosurus minimus*). The California Natural Diversity Database (CNDDB) includes observations of many of these species within one mile of the Project site, including Munz's onion, Coulter's goldfields, many-stemmed dudleya, San Diego ambrosia, slender-horned spineflower, and smooth tarplant.

Why impact would occur: As noted in the DEIR, the Project occurs within MSHCP Section 6.1.3 and 6.3.2 survey areas for the plant species listed above. The DEIR notes that focused plant surveys were conducted in the spring and summer of 2020

and 2021, now more than three years ago. None of the narrow endemic or criteria area plant species listed above were detected during those focused surveys. The Project proposes to begin construction in 2027, and plant species, including those listed above, may have established in the Project area in the six or seven years since focused surveys were performed. Recent surveys are needed to ensure proper identification and conservation of these species if present on the Project site.

Evidence impact would be significant: Narrow endemic plant species are highly restricted by their habitat requirements, and specific conservation measures have been identified in the MSHCP if the species are present. Focused surveys are required to ensure proper identification and conservation of the species if present on the Project site. The MSHCP specifies that survey results shall be documented in map and text formats and shall be presented for review. Therefore, CDFW recommends that Caltrans adopts Bio-Plant-1 below to properly identify narrow endemic plants, ensure avoidance, minimization, and mitigation strategies are implemented for narrow endemic species, and to demonstrate consistency with MSHCP requirements.

A-1.3 cont.

Recommended Potentially Feasible Mitigation Measure: CDFW recommends the inclusion of the below mitigation measure, (additions are in ***bold italics***), in the final EIR to ensure impacts to narrow endemic plants are avoided, minimized, and mitigated.

Natural Communities (NC)-21 (New):

Rare Plant Surveys. No more than 3 years prior to construction and during the appropriate blooming season for each plant with the potential to occur on-site, a qualified biologist shall conduct a pre-construction plant survey according to Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW, 2018). The survey shall be considered valid for up to three years. Special-status plants must be flagged for visual identification to construction personnel for work avoidance. Special-status plants detected that feature multiple plants in a single location must be fenced with stakes and flagging to temporarily identify the environmentally sensitive area (ESA). If complete avoidance is not feasible, Caltrans shall mitigate the loss of the plants through land acquisition and conservation at a mitigation ratio determined by CDFW after Project analysis.

COMMENT 2: Nesting Birds

Section 2.4.4-92, Page 1346

Issue: The DEIR does not disclose impacts to nesting birds. Instead, the DEIR proposes to develop a Nesting Bird Management Plan in the future to address potential impacts to nesting birds. This plan is broadly described in measure Animal Species (AS)-5 (BIO-28) (see below for measure).

A-1.4

Specific impact: The Project may impact suitable nesting and foraging habitat for least Bell's vireo (*Vireo bellii pusillus*), southern California rufous-crowned sparrow (*Aimophila ruficeps canescens*), California horned lark (*Eremophila alpestris actia*), Bell's sparrow (*Artemisiospiza belli belli*), coastal California gnatcatcher (*Polioptila californica californica*), tricolored blackbird (*Agelaius tricolor*), white-tailed kite (*Elanus leucurus*), yellow-breasted chat (*Icteria virens*), and osprey (*Pandion haliaetus*). All of these species are reported on CNDDB within one mile of the Project site.

Evidence impact would be significant: CDFW recommends the completion of pre-construction nesting bird surveys regardless of the time of year to ensure that

A-1.4 cont.

impacts to nesting birds are avoided. The timing of the nesting season varies greatly depending on several factors, such as bird species, weather conditions in any given year, and long-term climate changes (e.g., drought, warming, etc.). In response to warming, birds have been reported to breed earlier, thereby reducing temperatures that nests are exposed to during breeding.[2] CDFW staff have observed that climate change conditions may result in nesting bird season occurring earlier and later in the year than historical nesting season dates.

It is the Project proponent's responsibility to comply with all applicable laws related to nesting birds and birds of prey. Fish and Game Code sections 3503, 3503.5, and 3513 afford protective measures as follows: section 3503 states that it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by Fish and Game Code or any regulation made pursuant thereto. Fish and Game Code section 3503.5 makes it unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by Fish and Game Code or any regulation adopted pursuant thereto. Fish and Game Code section 3513 makes it unlawful to take or possess any migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Bird Treaty Act of 1918, as amended (16 U.S.C. § 703 et seq.). CDFW therefore recommends the completion of nesting bird surveys regardless of the time of year to ensure compliance with all applicable laws pertaining to nesting and migratory birds.

Recommended Potentially Feasible Mitigation Measure: Absent a Nesting Bird Management Plan for CDFW to review and approve, CDFW recommends that the pre-construction nesting bird survey in **Animal Species (AS)-5 (BIO-28)** be included in the final EIR as **Animal Species (AS)-6 (BIO-29)** as follows (deletions are in ~~strikethrough~~ and additions are in ***bold italics***) to ensure impacts to nesting birds are avoided, minimized, and mitigated.

A-1.5

Animal Species (AS)-6 (BIO-29) (NEW) Within ~~7~~ ***three*** days prior to the commencement of construction activities ~~(if between January 15 and September 1)~~, a qualified biologist will perform a nesting bird and raptor survey that will consist of at least two site visits to each area with potential nesting habitat to determine whether there are active nests within ~~200~~ ***500*** feet of the LOD. This survey will also identify the species, and to the degree feasible, nesting stage (e.g., incubation of young, feeding of young, near fledging). Nests will be mapped (not by using GPS as close encroachment may cause nest abandonment). If active nests are found ***during the pre-construction nesting bird surveys, a qualified biologist shall establish an appropriate nest buffer to be marked on the ground. Nest buffers are species specific and shall be at least 300 feet for passerines and 500 feet for raptors. A smaller or larger buffer may be determined by the qualified biologist familiar with the nesting phenology of the nesting species and based on nest and buffer monitoring results. Construction activities may not occur inside the established buffers, which shall remain on-site until a qualified biologist determines the young have fledged or the nest is no longer active. Active nests and adequacy of the established buffer distance shall be monitored daily by the qualified biologist until the qualified biologist has determined the young have fledged or the Project has been completed. The qualified biologist has the authority to stop work if nesting pairs exhibit signs of disturbance*** ~~construction will not occur within 200 feet of the nest, or as directed by a qualified biologist, until the nesting attempt has been completed and/or abandoned because of non-project related reasons~~.

A-1.6 **COMMENT 3: Western Burrowing Owl (*Athene cunicularia hypugaea*)**

[2] Socolar JB, Epanchin PN, Beissinger SR and Tingley MW (2017). Phenological shifts conserve thermal niches. Proceedings of the National Academy of Sciences 114(49): 12976-12981.

Sections 2.4.1 and 2.4.4, Pages 875 and 1255-1346

Issue: CDFW appreciates that focused burrowing owl surveys were conducted in the spring and summer of 2020 and 2021, following the 2006 MSHCP survey protocols. However, CDFW generally considers biological field assessments for wildlife to be valid for one to three years depending on the species and the Project proposes to begin construction in 2027. Thus, the timeline for this Project warrant updated surveys.

Specific impact: The Project site intersects with the MSHCP Burrowing Owl Survey Area and has the potential to provide suitable foraging and/or nesting habitat for western burrowing owl. The MSHCP provides take coverage for impacts to western burrowing owl, but only if the Project is consistent with the MSHCP. The Project has not yet established consistency with the MSHCP and Caltrans and the Western Riverside County Regional Conservation Authority (RCA) are in the process of preparing the Determination of Biologically Equivalent or Superior Preservation (DBESP) for the Project. Further, on October 10, 2024, the California Fish and Game Commission accepted a petition to list western burrowing owl as endangered under CESA, determining the listing "may be warranted" and advancing the species to the candidacy stage of the CESA listing process. As a candidate species, western burrowing owl is granted full protection of a threatened species under CESA. Take of any endangered, threatened, or candidate species that results from the Project is prohibited, except as authorized by State law (Fish & G. Code, §§ 86, 2062, 2067, 2068, 2080, 2085; Cal. Code Regs., tit. 14, § 786.9). Take of individual burrowing owls and their nests is defined by Fish and Game Code section 86, and prohibited by sections 3503, 3503.5 and 3513. Take is defined in Fish and Game Code section 86 as "hunt, pursue, catch, capture or kill, or attempt to hunt, pursue, catch, capture or kill."

A-1.6 cont.

Why impact would occur: The DEIR states that surveys detected suitable burrowing owl habitat on the Project site, including unoccupied burrows. The DEIR also notes that while burrowing owl were absent, burrowing owls are highly mobile and can move into the Project area. Burrowing owl observations are reported within two miles of the Project site. Given that the burrowing owl focused surveys were performed over three years ago and the Project is due to start in 2027, owls may be present at the time of construction and impacts to burrowing owl may occur.

Evidence impact would be significant: Figure 2.4.2-2 in the DEIR shows that burrowing owl surveys in 2020 and 2021 detected at least 140 potential burrowing owl burrows. Given the age of the focused surveys, the recent candidate listing status of this species, and the absence of take coverage from MSHCP consistency, this Project could have significant impacts on burrowing owl habitat and individuals. Please note that if Caltrans does not achieve consistency with the MSHCP, Caltrans does not have incidental take coverage for burrowing owl habitat.

Recommended Potentially Feasible Mitigation Measure: CDFW recommends the inclusion of the below mitigation measure, as revised (edits are in ~~strikethrough~~ and additions are in ***bold italics***) in the final EIR to ensure impacts to burrowing owls are avoided, minimized, and mitigated.

Animal Species (AS)-2 (Natural Environment Study (NES) BIO-25). Burrowing Owl Management Plan (Revised)

A Burrowing Owl Management Plan will be prepared by a qualified biologist and will include:

a) ***Habitat Assessment and*** Focused Survey for Burrowing Owl: Include within the plan the results of the MSHCP protocol survey conducted. ***The survey***

A-1.6 cont.

results shall be no more than three years old**. **The survey shall be performed according to the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area (Survey Instructions).[3] The Survey Instructions specify that first a habitat assessment is conducted. Results of the habitat assessment shall be provided to CDFW in a written report with photographs, indicating whether or not the project site contains suitable burrowing owl habitat. If suitable habitat is found, then focused surveys at the appropriate time of year (March 1 to August 31), time of day, and weather conditions shall be completed. Surveys shall not be performed during rain, high winds (> 20 mph), dense fog, or temperatures over 90 °F. The surveys shall include focused burrow surveys and burrowing owl surveys. For the focused burrow surveys, the location of all suitable burrowing owl habitat, potential owl burrows, burrowing owl sign, and any owls observed shall be recorded and mapped, including GPS coordinates in the report. The focused burrowing owl surveys shall include site visits on four separate days. Site visits shall be at least a week apart to avoid missing owls that may be using the site. The report shall also include an impact assessment evaluating the extent to which burrowing owls and their habitat may be impacted, directly or indirectly by Project activities. A final report discussing the survey methodology, transect width, duration, conditions, and results of the survey shall be submitted to the RCA, USFWS, and CDFW.

b) Preconstruction Survey for Burrowing Owl: Surveys by a qualified biologist shall be conducted in areas containing burrows and/or suitable habitat for burrowing owl within 14 days prior to ground disturbance ***following the survey instructions in the "Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area"***. The Biological Study Area (BSA) shall be the LOD and a 500-foot BSA.

c) Protocol for Presence: Take steps necessary for ***addressing*** ~~handling~~ the presence of burrowing owl (if found during either of the two surveys), which ***shall include proper take authorization and*** ~~may~~ include full avoidance~~, if feasible,~~ or passive relocation by a qualified biologist. ***Avoidance and minimization measures shall also include intensive monitoring (monitors on site daily, and trail cameras at burrows), noise abatement, time/date windows for construction, and plans to pause construction in case of owl distress.***

d) Agency Approval: The plan will need approval ***by*** USFWS and CDFW. Additional approval of the plan will be required by RCA if RCA-owned lands are involved.

Comment 4: Least Bell's Vireo (*Vireo bellii pusillus*)

Section 2.4.2-8, Page 1026, and elsewhere

A-1.7

Issue: The DEIR reports that Least Bell's vireo (LBV) were detected in the Project area in 2020 and 2021, and that the Project was redesigned to avoid LBV-occupied areas (section 2.4.2-8, page 1026). The DEIR acknowledges that LBV-occupied areas can shift from year to year (section 3-21, page 1513). Given that the focused surveys for LBV are now more than three years old, and that the Project is not planned to start construction until 2027, Caltrans should conduct new focused surveys to accurately determine impacts to LBV.

[3] Available at: https://www.wrc-rca.org/species/survey_protocols/burrowing_owl_survey_instructions.pdf

The DEIR also proposes a mitigation measure to ensure that impacted LBV-occupied lands are replaced with equivalent lands (Threatened and Endangered Species (TE)-3 / NES BIO-23, page 2054). The measure proposes mitigating at a ratio of at least 1:1. CDFW is unlikely to approve a mitigation ratio of less than 3:1 in a DBESP for LBV-occupied lands, regardless of whether impacts occur when LBV is present or not in California. If mitigation lands are not immediately available, appropriately vegetated, and occupied by LBV, CDFW will also need to account for temporal losses. Temporal losses would increase the mitigation ratio beyond 3:1.

Specific impact: The Project has the potential for take of LBV and their habitat due to construction activities, including vegetation removal that reduces foraging and nesting habitat and habitat quality.

Evidence impact would be significant: LBV is an endangered species pursuant to CESA (Fish & G. Code, § 2050 et seq.) and the federal Endangered Species Act, and is additionally afforded protection under Fish and Game Code sections 3503, 3503.5, and 3513. CDFW is concerned with potential impacts to LBV, including take and loss of foraging habitat that may result from ground-disturbing activities and vegetation removal. Impacts to birds, their nests, or their habitat would be considered a significant impact under CEQA.

Recommended Potentially Feasible Mitigation Measure(s): CDFW recommends the inclusion of the below revised mitigation measure in the final EIR to ensure impacts to LBV are avoided, minimized, and mitigated. Deletions are in ~~strikethrough~~ and additions are in ***bold italics.***

A-1.7 cont.

TE-3 (NES BIO-23). LBV ~~Habitat Compensation~~ (Revised)

a) If CDFW and/or the USFWS determine that a recent protocol-level survey according to USFWS' 2001 Least Bell's Vireo Survey Guidelines (https://www.fws.gov/sites/default/files/documents/survey-protocol-for-least-bells-vireo.pdf) is needed prior to start of construction, Caltrans shall conduct surveys and provide survey results to CDFW and USFWS to determine LBV-occupied habitat and appropriate mitigation thereof.

b) Because the federally and State-listed as endangered LBV occupies the riparian/riverine areas at Temescal Wash and associated tributaries proposed for impact, compensation for both riparian/riverine and LBV will be integrated and approval of the equivalency analysis by RCA and wildlife agencies shall occur to ensure any occupied LBV lands affected by construction are replaced with equivalent lands (i.e., mitigation lands are occupied or restored to occupation). Final mitigation ratios will be determined after consultation with RCA and wildlife agencies survey; however, at least ~~1~~ ***3***:1 mitigation consisting of establishment or re-establishment of occupied~~, or potentially occupied,~~ lands will occur to ensure no net loss of occupied habitat. Final approval ***by CDFW and USFWS of mitigation for LBV*** will occur prior to the start of Project construction, including any ground disturbance work and/or vegetation clearing.

COMMENT 5: Crotch's Bumble Bee (*Bombus crotchii*)

Section 2.4.5, Page 1367

A-1.8

Issue: Crotch's bumble bee (*Bombus crotchii*) is a candidate species for listing under CESA, and it forages in sage scrub and nests in rodent burrows, bunch grasses, and grass thatches. The Project has the potential to impact sage scrub, grassland, and rodent burrows. The DEIR does not propose any measure to avoid impacts to Crotch's bumble bee because according to the DEIR, there is only low potential for the species to occur in impacted areas of the Project. The DEIR also reports that no survey work was performed for Crotch's bumble bee. CDFW is

concerned with potential impacts to Crotch's bumble bee and their habitat considering that the Project's design plans indicate disturbance of areas that appear to contain suitable habitat for Crotch's bumble bee.

Specific impact: Crotch's bumble bee has been observed within one mile of the Project site. The Project has the potential for take of Crotch's bumble bee from collapsing burrows, entombment, displacement, dust from Project operations, and vegetation removal that reduces foraging and nesting habitat and habitat quality.

Evidence impact would be significant: The DEIR reports that the biological study area contains 1,100 acres of potentially-suitable habitat for Crotch's bumble bee, including needle grass - melic grass grasslands, clustered tarweed fields, wild oats and annual brome grasslands, upland mustard and star thistle fields, wild tarragon patches, brittle bush scrub, scale broom scrub, bush penstemon scrub, California buckwheat scrub, California sagebrush - black sage scrub, deerweed scrub, holly leaf cherry - toyon - greenbark ceanothus chaparral, quailbush scrub, and scrub oak chaparral. While the biological study area is larger than the area to be directly impacted by the Project through vegetation removal, there are areas of the Project that appear to host vegetation that could provide habitat for Crotch's bumble bee and Crotch's bumble bee has been documented within a reasonable dispersal distance of the Project area. The Project, as described, would remove potential habitat, including nesting and foraging habitat for Crotch's bumble bee. Impacts to Crotch's bumble bee are not covered by the MSHCP. CDFW considers the direct and indirect take of Crotch's bumble bee, and the loss of the species' habitat, as a significant impact unless mitigated to a level of less than significant.

Recommended Potentially Feasible Mitigation Measure(s): CDFW recommends that the below mitigation measure be included in the final EIR to ensure that impacts to Crotch's bumble bee and its habitats are evaluated and mitigated to a level of less than significant.

A-1.8 cont.

Bio-Insect-1 (New):

Crotch's Bumble Bee Habitat Assessment. Prior to vegetation removal and/or grading, a Designated Biologist shall conduct a habitat assessment to determine whether Crotch's bumble bee habitat is present or absent in the Project site and adjoining area. The habitat assessment shall be performed according to the 2023 CDFW Survey Considerations for Candidate Bumble Bee.

If habitat for Crotch's bumble bee is present, a Designated Biologist shall conduct focused surveys to determine presence/absence of Crotch's bumble bee prior to vegetation removal and/or grading. Survey methodology shall follow the 2023 CDFW Survey Considerations for Candidate Bumble Bee (available at https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=213150). Surveys shall be conducted during the flying season when the species is most likely to be detected above ground, between March 1 to September 1, by an approved Designated Biologist familiar with Crotch's bumble bee behavior and life history. Surveys shall be conducted within the Project site and areas adjacent to the Project site where suitable habitat exists. Survey results including negative findings shall be submitted to CDFW at least 30 days prior to Project-related vegetation removal and/or ground-disturbing activities. If the species is identified on site, Caltrans shall fully avoid the species absent take authorization. If the Project may result in take of Crotch's bumble bee through either nest destruction or destruction of potential nests hidden in bunch grasses or other nesting habitat, or if complete avoidance of Crotch's bumble bee cannot be achieved, Caltrans shall obtain appropriate CESA authorization (i.e., a finalized CESA ITP under Fish and Game Code section 2081) prior to initiation of Project activities.

COMMENT 6: Wildlife Connectivity

Section 1.4.1.1, Page 72, and Section 2.4.1-143, Pages 1015-1018

Issue: California wildlife is losing the ability to move and migrate as habitat conversion and built infrastructure fragments habitat and cuts off migration corridors.

Specific impact: Wildlife often use culverts to travel, and the Project may prevent movement of wildlife through culverts by modifying existing drainage systems to incorporate trash-capture devices. In addition, the Project is between MSHCP Proposed Linkage 1 and Proposed Extension of Existing Core 2 and bisects Proposed Core 1. As such, the Project is required to follow the guidelines in Section 7 of the MSHCP to improve the culverts to serve as wildlife corridors particularly for Stephen's kangaroo rat (*Dipodomys stephensi*), mountain quail, bobcats, mountain lions, and other species in the area. Caltrans should ensure that any culverts that are installed follow the guidelines in Section 7 of the MSHCP to ensure proper openness ratios, avoid impediment to wildlife movement, and avoid wildlife entrapment.

A-1.9 **Evidence impact would be significant:** The Project site intersects an "irreplaceable and essential" corridor for wildlife movement at Temescal Wash, as defined by the CDFW Areas of Conservation Emphasis (ACE) dataset. Irreplaceable and essential corridors are areas that are likely to host concentrated animal movement. If the Project reduces the ability of animals to move through the site, wildlife conservation could be significantly affected on a regional scale. Wildlife connectivity is likely to be influenced by installation of trash-capture devices, since those devices are likely to cut off all animal movement through existing culverts. Without further consideration of wildlife connectivity by the Project, important wildlife linkages could be lost.

Recommended Potentially Feasible Mitigation Measure(s): CDFW recommends the inclusion of the below mitigation measure in the final EIR to ensure impacts to wildlife connectivity are avoided and mitigated to a level of less than significant.

Bio-Connectivity-1 (New):

The installation of trash collection devices at culverts shall not impede the movement of wildlife, and safeguards shall be installed to avoid entrapment of wildlife.

II. Additional Comments

Western Riverside County MSHCP

A-1.10 Caltrans and the RCA are in the process of preparing the DBESP for the Project. The DBESP process should be completed prior to adoption of the final EIR. Thus, to demonstrate consistency with the MSHCP, as part of the CEQA review, Caltrans shall ensure the Project demonstrates compliance with the Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools (Section 6.1.2 of the MSHCP), the policies set forth in Section 6.3.2, and the Best Management Practices and the siting, construction, design, operation and maintenance guidelines as set forth in Section 7.0 and Appendix C of the MSHCP.

The DEIR proposes to use MSHCP consistency to obtain incidental take coverage for impacts to Stephens' kangaroo rat (SKR) habitat. However, the Project occurs within the SKR Habitat Conservation Plan (HCP) fee area boundary. The SKR HCP area map is available here: https://rchca.us/DocumentCenter/View/200/SKR-Plan-Area. State and federal authorizations associated with the SKR HCP provide take authorization for SKR within its boundaries. Note that the SKR HCP allows for

encroachment into the SKR Core Reserve for public projects, however, there are no provisions for encroachment into the Core Reserve for privately owned projects. If impacts to SKR habitat will occur from the proposed Project, the final EIR should specifically identify the total number of permanent impacts to SKR core habitat and the appropriate mitigation to compensate for those impacts. CDFW recommends that Caltrans coordinate with Riverside County Habitat Conservation Agency (RCHCA) to discuss potential impacts to SKR within the HCP.

Regarding western spadefoot (*Spea hammondii*), the MSHCP in Section 6.1.2 recommends surveys for amphibians, which the DEIR does not consider even though the DEIR reports that "Marginally suitable habitat occurs within the BSA in grasslands and woodlands in seasonal ponds, such as along Temescal Wash" for western spadefoot (Section 2.4.4-5, page 1259). Western spadefoot has been observed within one mile of the Project site, as reported on CNDDB. Surveys for amphibians, including western spadefoot should be conducted to disclose species impacts from the Project, and help assess riparian/riverine functions and values. If western spadefoot is present, CDFW recommends mitigation at a 3:1 (mitigated to impacted) ratio for impacts to western spadefoot habitat.

The Project is adjacent to MSHCP Conservation Areas, and based on the Project design plans the Project may encroach onto Conservation Areas owned and managed by the RCA. No impacts to the Conservation Areas are allowed, and Caltrans should coordinate with the RCA to avoid impacts to Conservation Areas, if needed.

A-1.10 cont.

To minimize edge effects and maintain conservation values within the Conservation Areas, Caltrans is required to implement the Urban/Wildlands Interface Guidelines (MSHCP Section 6.1.4) to minimize harmful effects from drainage, toxics, lighting, noise, invasives, barriers, and grading/land development. CDFW recommends that the final EIR include an analysis of edge effects related to Project construction and operation, such as noise, lighting, trespass, and toxics, and that Project-specific mitigation measures to avoid and minimize any effects be included in the final EIR. Avoidance and minimization measures can include, but are not limited to:

1. *Lighting Plan*: A Lighting Plan that identifies existing ambient lighting conditions, analyzes the Project lighting impacts on the adjacent Conservation Area, and demonstrates that the proposed lighting plan will not significantly increase the lighting in the Conservation Area. At a minimum, the Lighting Plan should identify measures that address light and glare from interior and exterior building lighting, safety and security lighting, and vehicular traffic accessing the site.

2. *Noise Plan*: A Noise Plan to avoid and minimize noise impacts based on an assessment of Project noise impacts on adjacent conservation areas during construction and post-development. The MSHCP specifies that Project noise impacts in Conservation Areas should not exceed residential standards.

3. *Landscaping Plan*: A Landscaping Plan that includes the use of native plant material on the Project site and avoids the use of invasive plant species identified in Table 6-2 of the MSHCP.

4. *Fencing Plan*: A Barrier and Fencing Plan that provides specific details designed to minimize unauthorized public access, predation by domestic animals, illegal trespass, and dumping in the MSHCP Conservation Area (such as block walls along areas directly adjacent to potential conservation areas).

5. *Best Management Practice*s: The final EIR should incorporate the guidance in MSHCP Section 7.0 and Appendix C of the MSHCP regarding Best Management Practices.

Streambed Alteration Agreement Notification

A-1.11 CDFW appreciates that Caltrans plans to submit an application for a Lake or Streambed Alteration Agreement pursuant to Fish and Game Code section 1602 (Table 1-9, Section 1-95, page 139).

ENVIRONMENTAL DATA

A-1.12 CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be filled out and submitted online at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CONCLUSION

A-1.13 CDFW appreciates the opportunity to comment on the DEIR to assist Caltrans in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Chris Briggs, Senior Environmental Scientist (Specialist) at 909-758-6774 or christopher.briggs@wildlife.ca.gov.

Sincerely,

DocuSigned by:

Attachment A: Mitigation and Monitoring Reporting Plan

CDFW recommends that the following language be incorporated into the final EIR for the Project.

Mitigation Measure		Timing	Responsible Party
NC-21	Rare Plant Surveys. No more than 3 years prior to construction and during the appropriate blooming season for each plant with the potential to occur on-site, a qualified biologist shall conduct a pre-construction plant survey according to Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW, 2018). The survey shall be considered valid for up to three years. Special-status plants must be flagged for visual identification to construction personnel for work avoidance. Special-status plants detected that feature multiple plants in a single location must be fenced with stakes and flagging to temporarily identify the environmentally sensitive area (ESA). If complete avoidance is not feasible, Caltrans shall mitigate the loss of the plants through land acquisition and conservation at a mitigation ratio determined by CDFW after Project analysis.	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent
AS-6 (BIO-29)	Within three days prior to the commencement of construction activities, a qualified biologist will perform a nesting bird and raptor survey that will consist of at least two site visits to each area with potential nesting habitat to determine whether there are active nests within 500 feet of the LOD. This survey will also identify the species, and to the degree feasible, nesting stage (e.g., incubation of young, feeding of young, near fledging). Nests will be mapped (not by using GPS as close encroachment may cause nest abandonment). If active nests are found during the pre-construction nesting bird surveys, a qualified biologist shall establish an appropriate nest buffer to be marked on the ground. Nest buffers are species specific and shall be at least 300 feet for passerines and 500 feet for raptors. A smaller or larger buffer may be determined by the qualified biologist familiar with the nesting phenology of the nesting species and based on nest and buffer monitoring results. Construction activities may not occur inside the established buffers, which shall remain on-site until a qualified biologist determines the young have fledged or the nest is no longer active. Active nests and adequacy of the established buffer distance shall be monitored daily by the qualified biologist until the qualified biologist has determined the young have fledged or the Project has been completed. The qualified biologist has the authority to stop work if nesting pairs exhibit signs of disturbance.	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent
AS-2 (BIO-25)	A Burrowing Owl Management Plan will be prepared by a qualified biologist and will include: a) Habitat Assessment and Focused Survey for Burrowing Owl: Include within the plan the results of the MSHCP protocol survey conducted. The survey results shall be no more than three years old. The survey shall be performed according to the Burrowing Owl Survey Instructions for the Western	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent

Mitigation Measure		Timing	Responsible Party
	Riverside Multiple Species Habitat Conservation Plan Area (Survey Instructions). The Survey Instructions specify that first a habitat assessment is conducted. Results of the habitat assessment shall be provided to CDFW in a written report with photographs, indicating whether or not the project site contains suitable burrowing owl habitat. If suitable habitat is found, then focused surveys at the appropriate time of year (March 1 to August 31), time of day, and weather conditions shall be completed. Surveys shall not be performed during rain, high winds (> 20 mph), dense fog, or temperatures over 90 °F. The surveys shall include focused burrow surveys and burrowing owl surveys. For the focused burrow surveys, the location of all suitable burrowing owl habitat, potential owl burrows, burrowing owl sign, and any owls observed shall be recorded and mapped, including GPS coordinates in the report. The focused burrowing owl surveys shall include site visits on four separate days. Site visits shall be at least a week apart to avoid missing owls that may be using the site. The report shall also include an impact assessment evaluating the extent to which burrowing owls and their habitat may be impacted, directly or indirectly by Project activities. A final report discussing the survey methodology, transect width, duration, conditions, and results of the survey shall be submitted to the RCA, USFWS, and CDFW. b) Preconstruction Survey for Burrowing Owl: Surveys by a qualified biologist shall be conducted in areas containing burrows and/or suitable habitat for burrowing owl within 14 days prior to ground disturbance following the survey instructions in the "Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area". The Biological Study Area (BSA) shall be the LOD and a 500-foot BSA. c) Protocol for Presence: Take steps necessary for addressing the presence of burrowing owl (if found during either of the two surveys), which shall include proper take authorization and include full avoidance or passive relocation by a qualified biologist. Avoidance and minimization measures shall also include intensive monitoring (monitors on site daily, and trail cameras at burrows), noise abatement, time/date windows for construction, and plans to pause construction in case of owl distress. d) Agency Approval: The plan will need approval by USFWS and CDFW. Additional approval of the plan will be required by RCA if RCA-owned lands are involved.		
TE-3 (BIO-23)	a) If CDFW and/or the USFWS determine that a recent protocol-level survey according to USFWS' 2001 Least Bell's Vireo Survey Guidelines (https://www.fws.gov/sites/default/files/documents/survey-protocol-for-least-bells-vireo.pdf) is needed prior to start of construction, Caltrans shall conduct surveys and provide survey results to CDFW and USFWS to determine LBV-occupied habitat and appropriate mitigation thereof.	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent

Mitigation Measure		Timing	Responsible Party
	b) Because the federally and State-listed as endangered LBV occupies the riparian/riverine areas at Temescal Wash and associated tributaries proposed for impact, compensation for both riparian/riverine and LBV will be integrated and approval of the equivalency analysis by RCA and wildlife agencies shall occur to ensure any occupied LBV lands affected by construction are replaced with equivalent lands (i.e., mitigation lands are occupied or restored to occupation). Final mitigation ratios will be determined after consultation with RCA and wildlife agencies survey; however, at least 3:1 mitigation consisting of establishment or re-establishment of occupied lands will occur to ensure no net loss of occupied habitat. Final approval by CDFW and USFWS of mitigation for LBV will occur prior to the start of Project construction, including any ground disturbance work and/or vegetation clearing.		
Bio-Insect-1	Crotch's Bumble Bee Habitat Assessment. Prior to vegetation removal and/or grading, a Designated Biologist shall conduct a habitat assessment to determine whether Crotch's bumble bee habitat is present or absent in the Project site and adjoining area. The habitat assessment shall be performed according to the 2023 CDFW Survey Considerations for Candidate Bumble Bee. If habitat for Crotch's bumble bee is present, a Designated Biologist shall conduct focused surveys to determine presence/absence of Crotch's bumble bee prior to vegetation removal and/or grading. Survey methodology shall follow the 2023 CDFW Survey Considerations for Candidate Bumble Bee (available at https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=213150). Surveys shall be conducted during the flying season when the species is most likely to be detected above ground, between March 1 to September 1, by an approved Designated Biologist familiar with Crotch's bumble bee behavior and life history. Surveys shall be conducted within the Project site and areas adjacent to the Project site where suitable habitat exists. Survey results including negative findings shall be submitted to CDFW at least 30 days prior to Project-related vegetation removal and/or ground-disturbing activities. If the species is identified on site, Caltrans shall fully avoid the species absent take authorization. If the Project may result in take of Crotch's bumble bee through either nest destruction or destruction of potential nests hidden in bunch grasses or other nesting habitat, or if complete avoidance of Crotch's bumble bee cannot be achieved, Caltrans shall obtain appropriate CESA authorization (i.e., a finalized CESA ITP under Fish and Game Code section 2081) prior to initiation of Project activities.	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent
Bio-Connectivity-1	The installation of trash collection devices at culverts shall not impede the movement of wildlife, and safeguards shall be installed to avoid entrapment of wildlife.	Prior to commencing ground- or vegetation-disturbing activities.	Project proponent

Response to Comment A-1.1

Thank you for providing comments on the Draft EIR/EA.

Response to Comment A-1.2

Comment acknowledged.

Response to Comment A-1.3

The Project Team appreciates the comment. The Project completed the required rare plant surveys, including surveys for narrow endemic species as defined by the MSHCP, and the surveys were negative. The Project is limited to the Caltrans ROW, which is routinely disturbed by roadway activity, maintenance, and other similar disturbances; therefore, the likelihood of new rare plants establishing is very low. The Project footprint, as well as work areas within drainages that are not routinely disturbed and have an increased chance of rare plant establishment, will be surveyed as part of Avoidance and Minimization Measure **NC-5**, Biological Monitoring; Avoidance and Minimization Measure **NC-6**, Construction and Project Limits, and Avoidance and Minimization Measure **NC-13**, Limits of Disturbance and Environmentally Sensitive Areas, to ensure there are no new populations of rare plants established prior to construction. Please refer to Section 2.4.1.4 of this Final EIR/EA for full descriptions of the measures mentioned above.

Response to Comment A-1.4

The Final EIR/EA addresses nesting birds and acknowledges a possible impact. No changes have been made because Avoidance and Minimization Measure **AS-5**, Nesting Bird Management Plan, as described in Section 2.4.1.4 of this Final EIR/EA, provides for a Nesting Bird Management Plan that will ensure compliance with all applicable laws pertaining to nesting and migratory birds. The Project is in an existing ROW in an existing freeway facility. Long-term operation may temporarily exclude species from nesting in the vicinity of the Project, although over time small numbers of birds may return. It is expected that if this happened, those birds would be acclimated to the new road conditions, including noise and any visual disturbance, and that under normal circumstances no additional impacts would be expected on those particular nesting birds. No changes have been made to Avoidance and Minimization Measure **AS-5**, Nesting Bird Management Plan.

Response to Comment A-1.5

Avoidance and Minimization Measure **AS-5**, Nesting Bird Management Plan, as described in Section 2.4.1.4 of this Final EIR/EA, provides for a Nesting Bird Management Plan that will ensure compliance with all applicable laws pertaining to nesting and migratory birds. No changes have been made to Avoidance and Minimization Measure **AS-5**, Nesting Bird Management Plan.

Response to Comment A-1.6

The Project Team understands concerns regarding burrowing owls. Burrowing owl surveys will be completed within 3 years of construction, and the Project Team has

made these edits to Avoidance and Minimization Measure **AS-2**, Burrowing Owl Management Plan. Please see Section 2.4.5, *Threatened and Endangered Species*, of this Final EIR/EA for these changes.

Response to Comment A-1.7

The Project Team understands concerns regarding least Bell's vireo (LBV). Avoidance and Minimization Measure **NC-1**, Vegetation Clearing Restrictions, which prevents riparian/riverine vegetation removal between March 1 and September 1, will ensure that no unanticipated impacts on LBV occur. No change has been made to Mitigation Measure **TE-3**, LBV Habitat Compensation, based on the comment. Note that mitigation for LBV includes a total of 3:1 mitigation, with at least 1:1 of that including establishment or re-establishment and the remaining 2:1 consisting of enhancement or restoration. In addition, Avoidance and Minimization Measure **JPR-3**, identified as part of the RCA Joint Project Review, is now included in Section 2.4.5, *Threatened and Endangered Species*, to avoid and minimize indirect impacts on LBV during its breeding season by restricting construction activities within 300 feet of suitable habitat, implementing biological and noise monitoring, and requiring detailed preconstruction and clearance surveys to prevent disruption of nesting and foraging behavior.

Response to Comment A-1.8

Thank you for your input on Crotch bumble bee. The Project will complete surveys for Crotch bumble bee prior to construction and will include the recommended measure, to be titled Avoidance and Minimization Measure **TE-5**, Crotch Bumble Bee. The measure is now included in Section 2.4.5, *Threatened and Endangered Species.*

Response to Comment A-1.9

The Project is in full compliance with MSHCP wildlife corridor policies and will not install trash-capture devices or otherwise block or impede wildlife movement. In addition, a Wildlife Crossing Plan will be prepared by a qualified biologist prior to construction to address potential modifications in wildlife movement at the above-identified wildlife crossings during construction. Please see Avoidance and Minimization Measure **NC-18**, Wildlife Undercrossing, for the full measures proposed in Section 2.4.1, *Natural Communities*.

Response to Comment A-1.10

The Project has undergone MSHCP consistency review and Determination of Biologically Equivalent or Superior Preservation approval on June 13, 2025, by the RCA and wildlife agencies The Project will be in full compliance with all applicable MSHCP policies as a result of the review and approval. Impacts on Stephens' kangaroo rat are identified within this Final EIR/EA at 192.1 acres and will be minimized and/or avoided according to Avoidance and Minimization Measure **TE-4**, Stephens' Kangaroo Rat. Regarding western spadefoot, although under review for FESA threatened listing, this species is currently fully covered under the MSHCP. No survey is required, and no mitigation is proposed.

The Project is fully contained within the Caltrans ROW, and no encroachment or impacts on adjacent conservation areas will occur.

The Project has undergone MSHCP consistency review, which includes consistency with MSHCP Section 6.1.4, *Urban/Wildlands Interface Guidelines,* best management practices, and the siting and design criteria as set forth in Section 7.0 and Appendix C of the MSHCP. In addition, measures such as Avoidance and Minimization Measures **AS-1**, Night Lighting Management, **TE-2,** Temescal Wash – Nesting Season Noise Requirements, **WET-1**, Temescal Wash – Biological Monitoring, and **NC-12**, Water Pollution and Erosion Control Plans, are included in the Final EIR/EA to address potential edge effects.

Response to Comment A-1.11

Comment acknowledged.

Response to Comment A-1.12

Caltrans will submit California Natural Diversity Database (CNDDB) entries for special-status species found during surveys. The environmental document filing fees have been paid.

Response to Comment A-1.13

Thank you for your comments and review.

4.6.1.2 Comment Letter A-2: U.S. Environmental Protection Agency

Comment Letter A-2

From: Ruiz, Elise <Ruiz.Elise@epa.gov>

San Bernardino, California 92401

Subject: EPA Comments on the Draft Environmental Assessment for the California Department of Transportation I-15 Express Lanes Project Southern Extension

Dear Gita Tokhmafsha:

The United States Environmental Protection Agency has reviewed the Draft Environmental Assessment that was prepared by Caltrans and the Riverside County Transportation Commission to analyze the impacts associated with the I-15 Express Lanes Project Southern Extension. Our comments are provided pursuant to the National Environmental Policy Act and Section 309 of the Clean Air Act.

A-2.1 The Draft EA states that the proposed project would improve and manage traffic operations, congestion, and travel times along the corridor by extending the I-15 Express Lanes an additional 15.8 miles from El Cerrito Road in Corona, through Temescal Valley, to State Route 74 (Central Avenue) in Lake Elsinore. The Draft EA also identifies that the project would add two tolled express lanes in both directions within the I-15 median, southbound I-15 auxiliary lanes between the Nichols Road entrance ramp and the Main Street exit ramp in Lake Elsinore and widen up to 16 bridges. Please consider the following comments as the Final EA is being prepared and as the project design is finalized:

Air Quality

A-2.2 The EPA confirms that, in 2021, Caltrans presented the proposed project to the Air Conformity Interagency Working Group and, at that time, the project did not qualify as a project of air quality concern (POAQC). We note that Section 2.3.6.3, PM Analysis, states that a "conformity hot-spot analysis for PM was prepared according to the procedures and methods provided in the latest version of the Transportation Conformity Guidance for Quantitative Hot-Spot Analyses in PM2.5 and PM10 Nonattainment and Maintenance Areas" and then further states that "the project meets the FCAA requirements and 40 CFR 93.116 without any explicit hot-spot analysis." We recommend continued coordination and consideration of best practices to reduce air quality impacts and greenhouse gas emissions for the long-term planning of this project.

A-2.2 cont.

Recommendations:

- Clarify in the Draft EA and in Section 2.3.6.3, PM Analysis, if a hot-spot analysis was conducted and disclose any additional results and project design changes related to the analysis.
- Should the project design change, or should Caltrans pursue a reevaluation for any reason to determine that the project's Finding of No Significant Impact continues to be supported, the EPA requests further consultation regarding project level transportation conformity.

Cumulative Impacts and Vehicle Miles Traveled Increases

Table S-1 (page S-12) of the Draft EA states that the project opening year and design year have an "*expected increase in emission of particulate matter 10 microns or less in diameter (PM10) and particulate matter 2.5 microns or less in diameter (PM2.5) when compared to both the existing and no-build conditions".* Page 2.2.5-27 further states that *"The Project increases in air pollutant emissions detailed in Section 2.3.6, Air Quality, would individually not be considered substantial under NEPA, given the existing and future cumulative conditions described in the 2024–2050 Regional Transportation Plan/Sustainable Communities Strategy Environmental Impact Report."* However, the Draft EA notes that *"the Project's incremental increase in particulate matter 10 microns or less in diameter (PM10) and particulate matter 2.5 microns or less in diameter (PM2.5) emissions would be cumulatively considerable under NEPA."* Further, the document states that*, "Project increases in air pollutant emissions would be cumulatively considerable."*

Mitigation Measure VMT-1 (p. 2.2.5-27) is proposed as mitigation for reducing impacts and is described as including the launching of the "Riverside County Free Rail Pass Program" to take place for approximately 2 years starting in 2025, and potential expansion of the Riverside Transit Authority's existing CommuterLink bus service. Given these descriptions, it is unclear how these programs could mitigate the air quality impacts and increases in VMT in 2030 and into the future build years for the facility.

A-2.3

Recommendations:

- To support the Finding of No Significant Impact, clearly indicate what mitigation measures proposed are required to reduce cumulative impacts to less than significant, given that the Draft EA concludes that "emissions would be cumulatively considerable under NEPA" and VMT increases and associated impacts are anticipated.
- Clarify what the increased VMT will be over the lifetime of the project in various scenarios where the mitigation identified is delayed, or not implemented fully, and what the corresponding increases in VMT-related impacts would be under these scenarios.
- Describe how the VMT-1 Mitigation Measure component of the 2-year Rail Pass program is projected to reduce the adverse effects of increased VMT for the project at 2030 and into the future, given that the program is only a 2-year program and the anticipated VMT increases will continue more than 2 years. If this program cannot be a commitment into the future at this time, we recommend revising the VMT -1 Mitigation Measure to explicitly state the limitation of this measure each time it is referenced or remove it from being

A-2.3 cont.

described as mitigating VMT (for example, include it in other sections of the mitigation plan).

Habitat Connectivity and Wildlife Movement

There is growing scientific support for the importance of maintaining and facilitating habitat connectivity as it pertains to wildlife movement. Connectivity allows wildlife to access needed resources, facilitates fundamental ecological processes, and promotes resilience by enabling wildlife to adapt, disperse, and adjust to changes in the quality and distribution of habitats. The Council on Environmental Quality's Guidance on Ecological Connectivity and Wildlife corridors directs agencies to design infrastructure such that it facilitates wildlife movement and avoids and minimizes adverse impacts that would fragment habitat connectivity. Through the NEPA review process, agencies can consider measures to advance corridors and connectivity as components of a proposed action, or as mitigation for the effects of a proposed action.

As noted in the Draft EA, the capacity for wildlife movement across I-15 in the project area has been degraded over the past decades by the increasing width of the interstate, increased traffic flows, and increased noise. Wildlife vehicle collisions are a common occurrence on this stretch of I-15, and development of the median into active traffic lanes, as proposed by this project, is likely to further reduce the chance of animals successfully crossing the highway. Additionally, road widening is likely to reduce the use of existing wildlife crossing structures due to the closing of skylights between the northbound and southbound freeway, thus reducing the openness factor and affecting the type and size of animal that would use the existing crossings. The cumulative impact of the many expansions of the I-15, combined with the ongoing development of important habitat areas along the freeway, has led to a near complete barrier to wildlife movement in portions of the project area. Given the significant acreage of wildlife habitat adjacent to the project, and existing constraints to wildlife movement, it is imperative that the project incorporate elements that enhance, protect, and restore wildlife connectivity across the I-15 corridor. The Nature Conservancy, in conjunction with Caltrans and several other agencies, recently released a study of wildlife crossings for a section of I-15 to the south of the project area[1]. This study may be helpful to inform the design of potential wildlife crossings or connectivity enhancements as a component of the I-15 Express Lanes Project.

A-2.4

Recommendations:

- Utilize wildlife vehicle collision data to inform incorporation of safety measures into project design such as additional wildlife crossing structures and/or wildlife fencing.
- Coordinate with the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, and authors of the I-15 Wildlife Crossing Design Report to determine whether there are specific design elements for wildlife connectivity that could be incorporated into the I-15 Express Lanes project. Document this coordination in the Final EA.
- Evaluate the effectiveness and feasibility of any wildlife connectivity structures or enhancements that have been proposed as a result of the above coordination and document the reasons why they were or were not incorporated into project design.
- Consider additional mitigation in the form of preservation or conservation easements on lands within and adjacent to the Bedford Canyon and Gavilan Hills–Santa Ana Mountains

[1] Interstate 15 Wildlife Crossings: Design Considerations for Local Wildlife: Species https://www.scienceforconservation.org /assets/downloads/FINAL_I-5_Wildlife_Crossing_Design_Experts_Report_ 09212023.pdf

A-2.4 cont.

linkages that would allow for enhanced wildlife connectivity through these important movement areas.

A-2.5

Emergency Evacuation and Safety Planning

Southern California has experienced, and continues to anticipate, an increase in extreme weather events, including wildfires and flooding. With the pressure of worsening environmental conditions, and the expected increased population growth in Riverside County and neighboring areas, it is important that emergency planning strategies be incorporated into transportation projects to ensure public safety.

Recommendations:

- Include information in the Final EA regarding how the project will be incorporated into emergency evacuation plans for the communities which reside near and/or use the I-15 and how management and operation of the TSM/TDM strategies might be modified during an emergency evacuation.

A-2.6

The EPA appreciates the opportunity to comment on the Draft EA and we are available to discuss our comments. Once the Final EA is released for public review, please provide an electronic copy to EPA. If you have any questions, please feel free to contact Elise Ruiz, the lead reviewer for the project, at (415) 972-3583 or ruiz.elise@epa.gov.

Sincerely,

CONNELL DUNNING

Response to Comment A-2.1

Thank you for providing comments on the Draft EIR/EA.

Response to Comment A-2.2

The comment is correct in stating that the Project was presented to the Southern California Association of Governments' (SCAG's) Transportation Conformity Working Group (TCWG) and that the Project was determined to be not a Project of Air Quality Concern (POAQC). As requested by the comment, an updated particulate matter (PM) Hot Spot form was presented to SCAG's TCWG on March 25, 2025. Section 2.3.6.3 in the Final EIR/EA was updated to include the results of this analysis. The March 2025 form included updates to the project schedule and purpose and need (Section 1.2 in the Final EIR/EA).

Response to Comment A-2.3

The comment is correct in stating that the Draft EIR/EA concluded that the Project is expected to result in an increase in emission of particulate matter 10 microns or less in diameter (PM_{10}) and particulate matter 2.5 microns or less in diameter ($PM_{2.5}$) when compared to both the existing and no-built conditions and that the increases in air pollutant emissions would be cumulatively considerable. To clarify, the term "cumulatively considerable" is specific to the CEQA analysis. Under NEPA, the Final EIR/EA concludes that, with implementation of mitigation, the Project would not result in significant impacts, supporting the Finding of No Significant Impact.

To support the Finding of No Significant Impact, Mitigation Measures **AQ-5** through **AQ-8** have been added to the Final EIR/EA. These additional measures will reduce air quality impacts associated with vehicle travel during construction and operation of the Project.

VMT in the Final EIR/EA is analyzed in connection with air quality, climate change, and greenhouse gas (GHG) impacts in Section 3.3; it is not analyzed as a transportation impact herein under CEQA because the NOP circulated for this Final EIR/EA in October 2019 predated July 1, 2020, when the State CEQA Guidelines were amended to provide a general rule that VMT is the most appropriate measure of transportation impacts (see State CEQA Guidelines, §§ 15007 ["Amendments to the [State CEQA] Guidelines apply prospectively only"]; 15064.3 [provisions of this section shall apply statewide beginning July 1, 2020]). Given the unique timing of this Project (NOP almost 10 months prior to implementation of SB 743), and consistent with Caltrans' guidance that projects initiated prior to July 2020 are not required to evaluate projects using VMT. Accordingly, the Draft EIR/EA used the appropriate approach for disclosing impacts associated with both level of service (LOS) and VMT in an effort to fully disclose information to the decision makers. Therefore, the comment regarding the recommendation to clarify VMT increases over the lifetime of the project under various implementation scenarios is acknowledged; however, because VMT is not analyzed as a transportation impact under CEQA, and the mitigation measures are not relied upon to reduce VMT to a less-than-significant level, such projections are not required for the purposes of this analysis.

Because VMT is not analyzed as a transportation impact, Mitigation Measure VMT-1 has been changed and is now identified as Mitigation Measure AQ-5 in this Final EIR/EA.

Response to Comment A-2.4

The Project is in full compliance with the MSHCP wildlife corridor policy Section 7.5.2 and the MSHCP Consistency Analysis was approved by the RCA, CDFW, and USFWS on June 13, 2025. Comments from the RCA and wildlife agencies were received specifically with regard to wildlife corridors. Although the Project will close the inside gap between many of the bridges, an extensive analysis was completed for 34 potential wildlife crossing structures as part of the Joint Project Review process. Crossings evaluated included jurisdictional features, metal pipe culverts, box culverts, bridge spans over creeks and washes, and bridge underpasses. If the crossing was not described for conservation under the MSHCP, it was excluded from further evaluation. A total of 12 crossings were determined to be described for conservation per the MSHCP, with impacts anticipated at nine of these crossings and impacts due to shading at seven of these crossings.

Within Section 7.5.2 of the MSHCP, in the Specific Initial Guidelines for Wildlife Movement Design Considerations within the Criteria Area, one of the requirements is to maintain openness ratio of at least 0.6 for crossings intended for use by large mammals such as mule deer (*Odocoileus hemionus*), with a minimum height of 3 to 4 meters maintained for mule-deer-specific crossings (Riverside County Integrated Project 2003). The openness ratio was calculated for each wildlife crossing that was large enough for mule deer, and all bridge undercrossings proposed for inside widening would still be vastly above the minimum openness ratio of 0.6, with the ratios ranging from 2.28 to 19.13 for bridge crossings along the Project alignment. In addition, specific avoidance and minimization measures have been incorporated into the Project to ensure that all crossing functionality is retained, including Avoidance and Minimization Measure **NC-18**, Wildlife Undercrossings. According to this measure, in portions of the MSHCP Conservation Area that are assembled to provide for wildlife movement or where there is known wildlife movement, the permittee is required to maintain functionality of wildlife crossings to comply with Section 7.5.3 of the MSHCP. Furthermore, prior to construction, a Wildlife Crossing Plan to address potential modifications in wildlife movement at identified wildlife crossings during construction will be prepared by a qualified biologist. The Wildlife Crossing Plan will be based on the information provided in the MSHCP Consistency Analysis (consistent with Section 6.6.2 (E[2]) of the MSHCP). Further details on Project compliance with wildlife corridors and MSHCP consistency are provided in Section 2.4-1, *Natural Communities*. Overall, the Project is not expected to substantially affect wildlife movement or linkage functions and values within the Project alignment because major wash crossings under I-15 bridges would be retained, including the priority linkages at Bedford Wash and Indian Wash. Cumulative impacts on wildlife crossings in the region will not occur.

Response to Comment A-2.5

The Project is included in the Connect SoCal 2024 Regional Transportation Plan, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll free express lane access for emergency responders and law enforcement. As discussed in Section 3.2, *Wildfire*, in the EIR/EA, construction of the median into express lanes would also serve to extend the firebreak between the east and west sides of I-15, which is an added benefit of the Project. Additionally, with implementation of additional lanes on I-15, the Project would have the potential to improve travel time and decrease emergency response times during operation.

In addition, during construction, the Project would implement several measures to minimize the risk of wildfires and ensure that emergency response plans are not compromised. Standard Project Measure **TR-1** (Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*) would be implemented through the preparation and implementation of a Transportation Management Plan (TMP) and shall consider construction and alternative route strategies in the event that portions of roadways within the Project limits are restricted during certain construction activities. Standard Project Measure **TR-1** would ensure continuous access and connectivity for emergency travel routes and coordination with emergency service providers. Additionally, the Project shall comply with the emergency operations plans of the County of Riverside, the City of Lake Elsinore, and the City of Corona, each of which outlines procedures for responding to extraordinary emergency situations.

To further reduce wildfire risks, the Project would implement Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)**, as well as comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a fire prevention plan. These measures are designed to avoid or minimize the risk of fires and ensure that all emergency procedures are consistent with local, State, and federal guidelines.

RCTC is committed to maintaining safety and accessibility for emergency services throughout construction and operation of the Project. By implementing these measures, RCTC aims to address wildfire concerns and ensure the well-being of the community.

Response to Comment A-2.6

Thank you for providing comments on the Draft EIR/EA. This Final EIR/EA will be provided to U.S. EPA electronically.

4.6.2 Organization Comments

4.6.2.1 Comment Letter O-1: Save Temescal Valley

Comment Letter O-1

From: Patrick Rutten
To: 15 Project South
Subject: [EXTERNAL] DEIR Comments on Toll Road Project
Date: Thursday, November 7, 2024 4:56:36 PM
Attachments: STV TOLL LANE LETTER 3.docx

O-1.1 Attached are comments from Save Temescal Valley regarding the I-15 Toll Road Project.

If you have questions please contact me by email.
Thank you,

Patrick Rutten

Jeff Dietzler, Capital Projects Manager (Tolling)
Riverside County Transportation Commission
4080 Lemon Street, Third Floor
P.O. Box 12008k
Riverside, CA 92501

Dear Mr. Dietzler,

This letter represents the views of the 1,300 members of Save Temescal Valley (STV) and is in response to the RCTC proposed I-15 Express Lanes Project which will extend from El Cerrito Road in Corona through Temescal Valley to State Route 74 (Central Avenue) in Lake Elsinore, Riverside County, California.

O-1.2 In reviewing the DEIR with respect to the Alternatives Analysis, several significant options were omitted regarding build alternatives.

1. Reverse Traffic Lanes - the purpose of this project is to move cars at peak use hours. There are several examples nationally, where dedicated commute lanes are built to accommodate morning and evening rush hours. The best example of this is the I-5 through downtown Seattle, Washington. A swing arm moves with the time of day. This would be a much more cost effective than building four-Toll lanes.

O-1.3

2. There is a "Metro Train" option in the RCTC's future plans. Why isn't that a primary build alternative? It's clearly needed now. Again, if the objective is to move people, why isn't there a train alternative that conceivably runs from Temecula to Corona? This project could be the first segment of a Temescal Valley metro. Based on Governor Newsom's interest in rails, clearly the cost would not be 100% dependent on regional taxpayers.

O-1.4

3. Why are there no new freeway interchanges, specifically at Campbell Ranch Road and the Temescal Canyon underpass? CalTrans has an "aspirational interchange" in the future transit plan, but it's needed now. There are proposed Warehouse projects at Dawson Canyon Rd. (1 million sq ft), the Serrano Business Complex (6.5 million sq ft) to the east of Tom's Farm, and another 1 million sq ft warehouse at Alberhill. How are the existing interchanges going to handle the additional truck traffic volume?

4. If the toll lanes are supposed to be a means of alleviating congestion, why not build a dedicated lane for trucks? What is the point of building toll lanes when close to 2,000 new truck trips are added to the 1-15 monthly? Is the RCTC expecting for commuters to pay tolls as trucks congestion occupies passenger vehicle space? At this time the existing truck traffic on I-15 is a major source of congestion. According to staff at the Public Hearings, they indicated they were not even aware of the warehouse projects, even though warehouse truck traffic will be a huge burden on the existing infrastructure. The oversight of warehouse traffic not being factored into the model is a glaring oversight. Further, there are new housing developments being built from south of Indian Truck Trail to Lake Elsinore. Are those homes factored into the traffic equation? See the link below to see what Bishop Ranch (3 million sq ft of warehouse and 15,000 new homes), and what Renaissance Ranch represents with more home and warehouses.

O-1.5

https://www.lee-associates.com/elee/sandiego/LeeLandTeam/WalkerCanyon/WalkerCanyon-Brochure.pdf

The I-15 Toll Road will be a $700M+ project before it's done. How could the RCTC have not factored in ***known*** growth, particularly the proposed multi-million warehouse square footage and truck volume? This information is readily available as it was published by Riverside County District 2 Supervisor Karen Spiegel.

https://rivcodistrict2.org/planning-news#2392643287-2478352087

https://rivcodistrict2.org/sites/g/files/aldnop256/files/migrated/Portals-0-PDF-Planning-News-Temescal-Valley-Residential-20180729.pdf

The modeled traffic and toll lane use are speculative, and the RCTC is going to ask voters to pass a bond to increase taxes on a "it should work" alternative. Just because the model says it will move cars, doesn't mean it's a 100% viable option. Presently, the public resentment for toll lanes is palpable given the current gridlock from the CA-91 to Cajelco Rd. is no better with toll lanes. Voters are not going to support more of the same, particularly the cost of Tolls. What is also disturbing was a comment from County staff that Corona voters will approve a tax in order to "push the bottleneck south."

O-1.6

STV acknowledges that something must be done to improve the existing I-15 gridlock. We are not opposed to a project that improves a bad situation, but it must be a project that truly addresses the problem. The identified commercial and residential growth needs to be included in the CEQA Alternative and Cumulative Impacts Analysis.

The current DEIR is being single-minded in the Alternative Analysis e.g. Build / No Build Toll Roads. The RCTC will only get **ONE** opportunity to fund this project with voters, and more of the same is a non-starter.

Sincerely,

//S// Patrick Rutten //S//

Patrick Rutten, Co-Chair
Save Temescal Valley

Response to Comment O-1.1

Thank you for providing comments on the Draft EIR/EA. It is noted that the comments are from Save Temescal Valley and are related to the I-15 Toll Road Project.

Response to Comment O-1.2

A reversible lane was an option that was considered early in the process (in 2019) by RCTC, using the example of I-15's express lanes in San Diego County as a potential solution. What the analysis indicated was that, given the split profile of the northbound and southbound roadbeds, a reversible lane configuration was deemed extremely expensive with dual retaining walls needed at the buffer locations plus a movable barrier system as opposed to one retaining wall on the centerline with single fixed concrete median barrier. Additionally, in the future, traffic volumes in both directions during both peak periods were sufficiently high enough that building three express lanes (with one of those being a reversable lane) would not provide sufficient capacity for I-15 in the future. Given these findings, the reversible lane option was not considered as a viable option and was not incorporated as a Project alternative.

Response to Comment O-1.3

Consideration of a rail alternative (e.g., train service) would conflict with several key components of the purpose and need established for this Project. The following table summarizes the Project's purpose and need and evaluates the consistency of a rail alternative with each element.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Rail alternative	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	A rail alternative does not improve or manage traffic operations or throughput (traffic flow) along the corridor.[1]
	Expand travel mode choice along the corridor.	A rail alternative would expand travel choice and RCTC has evaluated rail connectivity along the Santa Fe Branch Line as described below.
	Provide an option for travel time reliability.	A rail line would provide an option for travel time reliability better than the No-Build Alternative.

[1] The University of California, Los Angeles recently completed a study looking at the effects of transit on improving congestion. That study can be found here: https://ucits.org/projects/right-sizing-transportation-infrastructure-to-reduce-vehicle-miles-traveled/. As discussed in the study, "Increasing active transportation and transit options are two key strategies that California regions are using to try to reduce VMT, but to date, these projects have not been able to cut VMT. One potential explanation is induced travel demand. Just as adding a highway lane reduces congestion and travel times and thereby induces more people to drive, the same outcome may occur when rapid transit and bike facilities are constructed. As these facilities attract former drivers, congestion is reduced, and more or new drivers backfill the roadway capacity that was freed up." Studies like these reinforce the conclusion that transit does not improve traffic operations and travel times along a corridor due to the "backfill" effect.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
	Provide a cost-effective mobility solution.	Although no specific assessment has been completed, the ridership identified by RCTC indicates that rail is not yet a cost-effective solution, because it would be more expensive while benefiting fewer users.
	Expand and maintain compatibility with the express lane network in the region.	A rail alternative could be developed with compatibility with the express lane network; however, a rail alternative would not serve to expand the express lane network.

- As noted in the table above, components of a rail alternative are inconsistent with the purpose of the Project as defined by the PDT. However, RCTC is not hindering rail projects; rather, they are actively being researched as separate projects.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line Rail Project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

This study also identified that if rail was considered along the corridor, it would be accommodated along a former Santa Fe Branch Line between Corona and Lake Elsinore. The study identified the following potential feasible technologies: express bus service (which could also be served in the express lanes), bus rapid transit (BRT) (which also could be served in the express lanes), diesel multiple-unit trains, and commuter rail. The study further estimated ridership on this corridor to be between 126 and 921 riders per day and ultimately was recommended to be included in future plans by RCTC.

Furthermore, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity

passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options. Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative project between RCTC and Caltrans, the Project would enhance regional mobility and offer greater user flexibility of the regional transportation system.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Response to Comment O-1.4

This Project is an express lanes project located entirely within the Caltrans ROW and does not include any interchanges. However, the I-15 corridor has an additional interchange planned at Horsethief Canyon Road, which is identified in the SCAG Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS). That interchange is assumed to be in place in the design year scenarios, as it is identified in SCAG's fiscally constrained project list. Additionally, another interchange has been contemplated at Campbell Ranch Road/Temescal Canyon underpass, although that project is not in the SCAG fiscally constrained project list. The Project has been developed to ensure that it will not conflict with any potential interchanges at these locations. Please note that the assessment does not include a new connection at

Campbell Ranch Road/Temescal Canyon since that interchange is not identified in SCAG's fiscally constrained project list.

The Western Riverside Council of Governments' Transportation Uniform Mitigation Fee (TUMF) program does collect money from future development and programs some regional interchange projects. The TUMF program currently identifies TUMF interchange improvements at the Cajalco Road, Temescal Canyon, Lake Street, Nichols Road, and State Route (SR-) 74 interchanges in the study area.

Response to Comment O-1.5

This Project is an express lanes project located entirely within Caltrans ROW, and it considers two alternatives:

- A Build Alternative (Preferred Alternative)
- A No-Build Alternative (no Project)

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

The Project does not include additional lanes solely dedicated to trucks.

Known growth was factored into the Project, including the traffic modeling completed for the Project. The travel demand forecasting for the Project began in 2019 and was completed when the Volumes Report was reviewed and approved by Caltrans on April 30, 2020.

The volumes were developed following a detailed process. First, the Riverside County Traffic Analysis Model (RIVTAM) was used. This regional travel demand model had been updated with future land use assumptions consistent with the SCAG 2016 RTP/SCS (which was the current RTP/SCS available at that time). Additionally, all agencies in the study area (e.g., City of Lake Elsinore, Riverside County, City of Corona) were part of the PDT and provided input related to approved and pending developments in the study area (e.g., reasonably foreseeable projects that had applications on file with the agency at the time the analysis was being completed). The information used was from early 2020 and would not reflect any project application occurring after that date. It should be noted that the future year model assumptions use the best available data that was obtained/coordinated just after the NOP was prepared for the Project in October 2019.

The assumed growth for all traffic analysis zones along the study corridor includes substantial growth assumptions—the addition of over 35,000 residential units and over 3,200 industrial/warehousing employees along the study corridor (note that 3,200 employees would generally translate between 2.5 million and 5 million square feet, depending on the type of use and the employment yield along the corridor). The growth assumptions were consistent with the information that was available at the time.

Most of the applications on the referenced websites provided in the comment have application dates that occurred after the Project NOP and after the travel demand forecasting had begun/was completed for the Project. Finally, most of the projects noted by the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local areas where they are located.

Response to Comment O-1.6

As noted above, the Project was modeled using the most up-to-date information that was available at the time the studies were initiated (and when the NOP was released in October 2019). The forecasts and operations assessment were completed using state of the practice software, methodologies, tools, and planned growth information available.

The analysis included for the Project identified that, by 2030, southbound I-15 would experience significant congestion without the Project because I-15 generally transitions from six lanes just north of Ontario Avenue to three lanes at Weirick Road. This lane reduction creates the southbound bottleneck that is experienced along the corridor, and the Project should help alleviate this by changing that lane reduction from six lanes to five lanes with the Project. Furthermore, the northbound direction currently experiences congestion related to oversaturation that begins around Cajalco Road and extends south. The Project will add a toll option to this corridor that will be beneficial for users.

The comment related to shifting bottlenecks is noted. I-15 will transition to three lanes at the south end of the corridor (in Lake Elsinore) in each direction (four lanes in the future with a planned managed lane in each direction from Main Street in Lake Elsinore to the I-15/I-215 junction). As shown in Chapter 4 of the Traffic Operations Analysis Report (TOAR) (*Design Variations* section), a variety of alternatives were tested at the express lane terminus section to help identify a lane drop transition that minimizes the bottleneck in that area. (The TOAR is available on the Project website: https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.)

The comment regarding RCTC's opportunity to improve the I-15 corridor is noted. The PDT created the purpose and need for the Project, and the Build Alternative (Preferred Alternative) is the most viable alternative that meets the purpose and need for the Project.

RE: Letter of Support for the Interstate 15 Express Lanes Project Southern Extension

Dear Riverside County Transportation Commission,

Rebuild SoCal Partnership (RSCP), representing 2,750 contractors who employ over 90,000 union workers across 12 Southern California counties, writes **IN SUPPORT** of the proposed Interstate 15 Express Lanes Project Southern Extension. The extension is a critical infrastructure project, aligned with our mission to enhance mobility and drive economic growth across the Inland Region.

O-2.1

The proposed 15.8-mile I-15 Express Lane extension is a well-conceived solution to improve traffic flow and reduce congestion, providing a reliable travel option for Riverside County commuters. The addition of tolled express lanes and auxiliary lanes will also efficiently, cost-effectively accommodate increasing traffic volumes, which currently increase commute times considerably for our hard-working Inland Empire families. In short, the Interstate 15 Express Lanes Project Southern Extension is vital for the region's growth and economic vitality, as planned bridge widening, noise barriers, and drainage enhancements further demonstrate our regional commitment to community safety and sustainability.

As a strong advocate for regional infrastructure development, RSCP vigorously supports the continuation of the I-15 Extension, including expedient completion of the environmental review to quickly move into the construction stage, slated to begin as early as 2027. And we commend RCTC and Caltrans for ongoing efforts to engage the community and stakeholders throughout the approvals process.

Thank you for your dedication to improving Southern California's infrastructure. We look forward to witnessing the incredible benefits of the I-15 Extension project in partnership with the agencies, commissions, and departments leading the charge.

Sincerely,

Jon Switalski
Executive Director

Re: I-15 Express Lanes Project Southern Extension Draft Environmental Impact Report/ Environmental Assessment

Dear Jeff Dietzler,

O-3.1

The undersigned organizations write to raise several concerns about the I-15 Express Lanes Project Southern Extension (ELPSE) Draft Environmental Impact Report/Environmental Assessment (DEIR/EA). Our organizations work collectively in California to advance sustainable and equitable transportation to meet our climate goals, improve travel and quality of life for residents, and reduce harms to communities most impacted by our transportation system and freight-related land uses. We advocate for alternatives to highway expansion and closely monitor all highway capacity projects in development. We provide the following comments below and additional details in the attachment on the I-15 ELPSE DEIR/EA for consideration by Riverside County Transportation Commission and Caltrans District 8.

1. **The DEIR/EA does not adequately analyze and mitigate induced vehicle miles traveled**

The DEIR/EA substantially underestimates the increase in vehicle miles traveled (VMT) – the induced VMT – that the project would cause. The DEIR/EA (p. 3-108) states that the project would add 125.8 million more VMT in the design year than under the no build alternative.

O-3.1 cont.

That is more than 60% less than the 318.7 million induced VMT estimated for the project by the California Induced Travel Calculator (Calculator), which can be used to estimate induced VMT from additions of both general-purpose lanes, high-occupancy vehicle lanes, and high-occupancy toll (HOT) lanes like those that the project would add.[1] Using an outdated and incomplete method to estimate the project's VMT impacts violates CEQA.[2] Not only is the project's analysis of VMT impacts substantively flawed, the DEIR/EA's substantial underestimation of the project's induced VMT effects propagate throughout the DEIR/EA and render inadequate many other impact analyses in the document.

2. The DEIR/EA relies on flawed travel demand modeling that underestimates project impacts

O-3.2

The assessment of several environmental impacts in the DEIR/EA, such as the air quality assessment, relies on travel demand models that do not satisfy Caltrans's checklist for measuring induced VMT. As a result, analysis relying on this model misrepresents real foreseeable impacts. The DEIR/EA should rely on models that provide an accurate accounting of vehicle miles traveled (VMT) that is reasonably anticipated to be generated by the project in the future build scenarios. However, the DEIR/EA does not adequately factor in the induced travel expected to be generated by adding two additional lanes (either in the dual express lanes or dual general purpose lanes alternatives) into the VMT analysis, resulting in a significant underestimate of future VMT and related impacts to air quality. The underestimate of future VMT also results in an inaccurate assessment of greenhouse gas emissions, energy use, noise impacts, and other impacts such as freight-related land uses that must all rely on an accurate calculation of future VMT.

3. The DEIR/EA significantly underestimates impacts to air quality

O-3.3

We are particularly concerned about the accuracy of the air quality impacts assessment due to the high proportion of diesel trucks in the fleet mix along the I-15 corridor and the growth in freight-related land uses in Riverside County. The anticipated increase in truck VMT due to this project will have a significant impact on air quality. However, the I-15 ELSPE was not identified as a project of air quality concern despite these reasonably anticipated impacts to air quality in the region through additional diesel truck traffic and inducing more freight-related land use growth.

4. The DEIR/EA significantly overestimates the congestion reduction of the project

O-3.4

The traffic operations analysis assessment overestimates the congestion relief benefit from the project because it also fails to account for induced VMT. Similar projects have for

O-3.4 cont. decades promised to relieve congestion through adding new lanes only to demonstrate yet again the predictability of induced demand and worse congestion upon completion of the project. Evidence documented by Volker and Handy[3] reveals that similar levels of induced VMT can be expected from express lanes as for general purpose and high occupancy vehicle lanes.

O-3.5 Please see the attachment to this letter for additional technical details that expand on the high level concerns we have outlined here. We appreciate your attention to these concerns and look forward to your response.

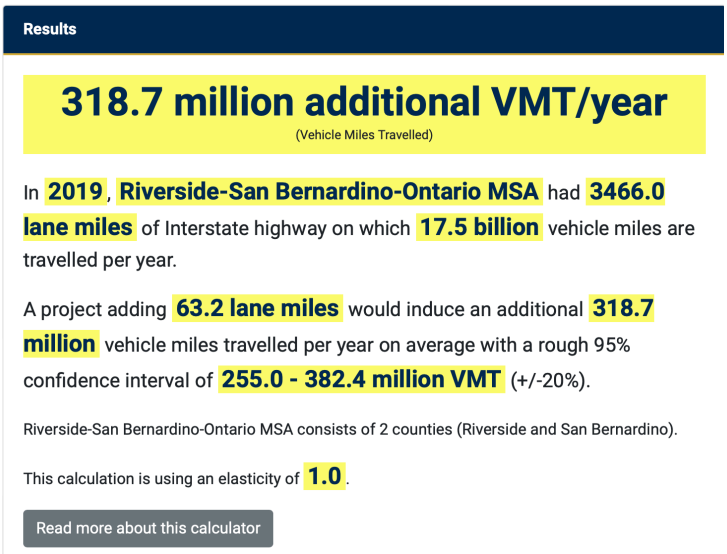
Attachment - Additional Technical Comments on I-15 Express Lanes Project Southern Extension Draft Environmental Impact Report/ Environmental Assessment

1. **The DEIR/EA does not adequately analyze and mitigate induced vehicle miles traveled**

The DEIR/EA substantially underestimates the increase in vehicle miles traveled (VMT) – the induced VMT – that the project would cause. The DEIR/EA (p. 3-108) states that the project would add 125.8 million more VMT in the design year than under the no build alternative. That is more than 60% less than the 318.7 million induced VMT estimated for the project by the California Induced Travel Calculator (Calculator), which can be used to estimate induced VMT from additions of both general-purpose lanes, high-occupancy vehicle lanes, and high-occupancy toll (HOT) lanes like those that the project would add.[4] Caltrans' Transportation Analysis Framework (TAF; p. 18)[5] likewise instructs that, "in the absence of a travel demand model capable of projecting induced travel based on the checklist assessment, the NCST Calculator may supply a useful data point for consideration in the analysis of a HOT lane project." Here, as discussed below, the Riverside County Transportation Analysis Model (RIVTAM) used to estimate the project's VMT effects does not satisfy the TAF's checklist assessment and is otherwise not capable of projecting induced VMT. Using an outdated and incomplete method to estimate the project's VMT impacts violates CEQA.[6] The relevant output from the Calculator is shown below in Figure 1.

O-3.6

Figure 1. California Induced Travel Calculator Output for the Project



[4] The California Induced Travel Calculator was developed and is maintained by the National Center for Sustainable Transportation. It is based on extensive empirical evidence of the network-wide induced VMT effects from roadway capacity expansions. The Calculator is available here: https://travelcalculator.ncst.ucdavis.edu/

[5] Caltrans. 2020. Transportation Analysis Framework. First Edition. https://dot.ca.gov/-/media/dot-media/programs/transportation-planning/documents/sb-743/2020-09-10-1st-edition-taf-fnl-a11y.pdf

[6] *Berkeley Keep Jets over the Bay Committee v. Board of Port Commissioners* (2001) 91 Cal.App.4th 1344, 1364-1367.

O-3.6 cont.

The DEIR/EA is also flawed in suggesting that the project would induce significantly less VMT than an alternative project that added general-purpose lanes instead of HOT lanes. The February 25, 2021 draft VMT impact analysis (p.5)[7] for the project estimates that a general-purpose lane alternative would increase design year (2050) VMT by 10.45% more than would occur under a no project scenario, while the proposed HOT lane project would only increase VMT by 2.32%. That result contravenes the available empirical evidence, which suggests that new HOT lanes have similar induced travel effects as general-purpose lanes.[8]

Not only is the project's analysis of VMT impacts substantively flawed, the DEIR/EA's substantial underestimation of the project's induced VMT effects propagate throughout the DEIR/EA and render inadequate many other impact analyses in the document.

O-3.7

2. The DEIR/EA relies on flawed travel demand modeling that underestimates project impacts

The assessment of several environmental impacts in the DEIR/EA, such as the VMT analysis and the air quality assessment, relies on travel demand models that do not satisfy Caltrans's checklist for measuring induced VMT. As a result, analysis relying on this model misrepresents real foreseeable impacts. The DEIR/EA should rely on models that provide an accurate accounting of VMT that is reasonably anticipated to be generated by the project in the future build scenarios. However, the DEIR/EA does not adequately factor in the induced travel expected to be generated by adding two additional lanes (either in the dual express lanes or dual general-purpose lanes alternatives) into the VMT analysis, resulting in a significant underestimate of future VMT and related impacts to air quality. The underestimate of future VMT also results in an inaccurate assessment of greenhouse gas emissions, energy use, noise impacts, and other impacts such as freight-related land uses that must all rely on an accurate calculation of future VMT.

There are several factors that contribute to flaws in the travel demand modeling. These flaws get propagated throughout many impact analyses in the DEIR and thus lead to inaccurate assessments and underestimates of environmental impacts. Environmental impacts are thus inadequately mitigated. The flaws in the travel modeling include:

- Truncation of the traffic study area to a 5-mile buffer around the highway project. This truncation fails to account for the complete effects on travel behavior and thus transportation impacts from the 16.9-mile long project (project limits between Post Miles 21.2 and 38.1, according to the Traffic Operations Analysis Report, though project descriptions are inconsistent throughout the DEIR).
- The travel demand model used to calculate VMT, the Riverside County Transportation Analysis Model (RIVTAM), is a county-wide model limited to Riverside County. A highway expansion project of this magnitude (two new highway lanes in each direction for a total of approximately 63 new lane miles of express lanes, as well as 1.75 lane

O-3.7 cont.

miles of auxiliary lanes) will have transportation impacts far beyond the borders of Riverside County. By comparison, the California Induced Travel Calculator uses the metropolitan statistical area as the unit of analysis for induced VMT from interstate highway lane additions. A travel demand model limited to the county will provide insufficient analysis of this project. The Western Riverside Council of Governments administers and distributes another travel demand model, the Riverside County Transportation Model (RIVCOM), which covers the entire SCAG region but focuses on Riverside County, was available for use but was not used.

- Regardless, any travel demand model used needs to be assessed with and meet criteria in the "Checklist for Evaluating Adequacy of Travel Demand Models for Estimating Induced Travel" in Caltrans' TAF. A memorandum that Fehr & Peers prepared for Western Riverside Council of Governments about VMT analysis of transportation projects specified that the effects of transportation projects on land use patterns and trip generation – key parameters in the TAF checklist – "are not directly included in the RIVTAM model, but its inputs and parameters can be modified to include additional sensitivity, or off-model analysis methods such as the use of research-based elasticities can be used to measure regional VMT changes associated with changes in lane-miles associated with the proposed projects."[9] The DEIR documents none of these steps necessary to make the travel demand model meet the requirements for accurately estimating induced VMT, nor does the DEIR use research-based elasticities as is recommended in the TAF, and thus fails to accurately estimate transportation impacts.

3. The DEIR/EA significantly underestimates impacts to air quality

We are particularly concerned about the accuracy of the air quality impacts assessment due to the high proportion of diesel trucks in the fleet mix along the I-15 corridor and the growth in freight-related land uses in Riverside County. The anticipated increase in truck VMT due to this project will have a significant impact on air quality. However, the I-15 ELSPE was not identified as a "project of air quality concern" despite these reasonably anticipated impacts to air quality in the region through additional diesel truck traffic and inducing more freight-related land use growth.

O-3.8

This project is in a nonattainment area for the federal and State 8-hour ozone standards, the State 1-hour ozone standards, the federal and State fine particulate matter ($PM_{2.5}$) standards, and the State particulate matter (PM_{10}) standards. It is also in a maintenance area for the federal PM_{10}, carbon monoxide (CO), and nitrogen dioxide standards. Per federal code, hot-spot analyses are required for projects in nonattainment and maintenance areas unless the project does not qualify as a project of air quality concern (POAQC). The Air Quality Assessment states that the project "does not qualify as a POAQC" because it assumes the project would, in summary, "not result in a significant increase in truck trips" nor a "significant increase in the number of diesel vehicles." However, the transportation analysis fails to accurately estimate induced travel and underestimates the number of new trips and vehicles on the project corridor.

[9] Fehr & Peers. "WRCOG SB 743 Implementation Pathway Document Package." March 2019. https://www.fehrandpeers.com/wp-content/uploads/2019/12/WRCOG-SB743-Document-Package.pdf, page 57.

O-3.8 cont.

In the determination that the project is not a POAQC, the authors imply that there will be no significant increase in the number of diesel vehicles because heavy truck trips will not be induced by new express lanes. Again, this impact assessment relies on an inaccurate estimate of future vehicle travel as described above.

This determination also contravenes the empirical evidence of induced travel. Even if heavy-duty trucks would be restricted from using the express lanes,[10] passenger automobiles will "sort" into the express lanes and create new capacity in the general purpose lanes for heavy-duty trucks and passenger vehicles alike. This new capacity can be considered akin to new general purpose capacity in how it influences travel times in the short-run. Freight and truck travel is indeed sensitive to travel times. In fact, research finds that freight travel "is at least as responsive to road supply as other traffic" and that increases in freight and truck VMT comes in part from land use and employment changes.[11] This research also found the relationship between road supply and county-level data for "employment in traffic-intensive activities" – a measure of land development change to "motor freight transportation and warehousing" uses. Their findings show that employment in this sector increases with highway capacity and that employment in this sector has become more sensitive to highway capacity over time (1983 to 2003). In short, this determination about the project's air quality concern was made with inaccurate travel forecasts, inaccurate estimates of future traffic and heavy-duty truck volumes, and is contrary to the academic evidence.

Furthermore, the DEIR (page 2.3.6-19) states that a "conformity hot-spot analysis for PM was prepared for the project, [and] submitted to the SCAG Transportation Conformity Working Group for consideration at the September 28, 2021 meeting." At that meeting it was "confirmed that the Project is not a project of air quality concern (see Appendix B of the Air Quality Report)." In fact, Appendix B of the Air Quality Report does not include a PM hot-spot analysis but rather a "Project Summary Form for Interagency Consultation" that was used by the Working Group members in their determination that the project meets provisions of the Clean Air Act "without any explicit hot-spot analysis" (Appendix B, p. 4).

[10] The DEIR/EA's Air Quality Assessment Report (Appendix B, p. 3) asserts that heavy-duty trucks would be restricted from using the project's express lanes, but does not substantiate that claim with any detailed information about project operation.

[11] Duranton, Gilles, and Matthew A. Turner. 2011. "The Fundamental Law of Road Congestion: Evidence from US Cities." American Economic Review, 101 (6): 2616–52. https://pubs.aeaweb.org/doi/pdfplus/10.1257/aer.101.6.2616

Response to Comment O-3.1

Thank you for providing comments on the Draft EIR/EA. The commenter is correct that the stated increase in the Draft EIR/EA between the No-Build and Build Alternative (Preferred Alternative) was estimated to be 125.8 million VMT (e.g., induced travel associated with the Project). The commenter is also correct in that the National Center for Sustainable Transportation (NCST) calculator estimates additional VMT that is higher than what was predicted by the model.

However, the comment is incorrect in assuming that these numbers should be the same. Specifically, when comparing a future year No-Build scenario to a Build scenario, a short-term elasticity should be used. The NCST calculator only uses long-term elasticities; it assumes a 1.0 elasticity over a 20-year horizon, whereas the model is isolating just the induced travel associated with improved travel times and increased travel options that induce travel over a 1-year horizon.

Additionally, the total VMT associated with the Project includes a variety of other influences associated with development, including future population and employment growth, which are also included in the No-Build and Build scenarios. As such, comparing a short-term elasticity estimate to a long-term elasticity value in the NCST calculator is not appropriate because they reflect fundamentally different values.

The VMT included in the Draft EIR/EA assessment used the VMT change between the base year model and the future year with Project forecasts. The existing model predicts 9,566,400 VMT per day. If that number is divided by the six lanes the freeway currently has, the result is a VMT estimate of 1,594,407 VMT per lane along the corridor. The Project will add four additional lanes. If a 1.0 elasticity is assumed for those express lanes, then the resulting 10-lane corridor would result in a VMT estimate of 15,944,067 VMT/day. This is very close to the 16,011,542 VMT/day (or a daily VMT increase of 6,445,102 VMT/day) that the model anticipated.

The comment suggests that the 6 million VMT/day increase used in the assessment underestimated the induced travel component by 193,372 VMT/day, or underestimated to total VMT growth by 3 percent. The comment also assumes that the induced travel calculator's use of a 1.0 elasticity is correct. However, that assumption is potentially flawed. Specifically, the best approach for estimating the effects of building new lane miles, and the potential magnitude of such effects, is still widely debated. Additionally, congestion relief and vehicular throughput (traffic flow) is only one possible benefit gained from capacity improvements, along with the accommodation of additional travelers, improved access, improved economic activity, and safety enhancements that are not reflected in the elasticity approach.

It should also be noted that the NCST calculator is largely based on data published by Duranton and Turner, and the data collected compares long-term induced travel effects from data collected in the 1980s through early 2000s (although one study extended its data from 1981 to 2015), when significant economic factors affected how much people traveled in addition to the new lane miles that were added to the system. The VMT growth during this time period may not accurately reflect current travel elasticities, VMT-

reducing policies, and other travel behavior that influences when, how often, and how far individuals travel. Specifically, recent research has indicated that there is a "maximum" amount of time that people are willing to spend in their vehicles on any given day. Utilization of data from the 1980s through 2000s in areas where that "maximum" amount of acceptable travel time was not yet being approached may result in induced travel elasticity estimates that do not reflect current travel trends.

The Los Angeles County Metropolitan Transportation Authority (Metro) used more recent travel data to evaluate elasticities in Los Angeles County; this data reflects the extensive travel times in Los Angeles County. Additionally, the Metro information pertains to areas closer to the study area than the dated studies used in the NCST calculator. This Metro evaluation found very different elasticities than those used in the NCST calculator, and they were significantly lower. One of the explanations as to why the Metro elasticities are lower than those used in the NCST relates to the "maximum" amount of time people are willing to spend time in their vehicles, which is mentioned above. Since Los Angeles County has higher commute times and individuals spend more time in their vehicles compared to the statewide average, even major freeway widening projects had significantly lower induced travel than what the NCST elasticities would have predicted.

To determine if Western Riverside County could experience similar effects, the mean travel time by county was reviewed using American Community Survey data. That information shows the average commute time in California to be 29.3 minutes. Los Angeles County's average is 31.3 minutes, roughly 7 percent higher than the statewide average. Riverside County's average is 33.3 minutes, 14 percent higher than the statewide average. Based on a review of this dataset, Riverside residents are already spending an inordinately long amount of time in their vehicles; induced travel elasticities are expected to be even lower than what Metro found if the explanation of time in vehicle is accounted for in the assessment. The NCST calculator should be updated to account for "maximum tolerable commute times" to more accurately account for the local context missing from the dated statewide dataset.

Given that the average commute time in 1990 (the time period in which the NCST data was collected) was 26.2 minutes in Los Angeles County and was 28.4 minutes in Riverside/San Bernardino Counties according to the Public Policy Institute of California, this "maximum tolerable commute time" instance shown in the recent survey data in the Metro region may actually be even more pronounced in Riverside County.

It should be noted that the model actually showed a short-term VMT increase of 1.6 million VMT/day associated with dual general purpose lane additions—or roughly double what would have been anticipated in the NCST calculator for the same project using a long-term elasticity. This indicates that the model is perhaps more sensitive and estimated higher levels of induced travel relative to what is in the NCST calculator for the addition of general purpose lanes. However, the model may be overly sensitive to pricing of the express lanes compared to the NCST calculator, which has no distinction between tolled lanes and general purpose lanes.

Finally, the reference to underestimating VMT impacts is not entirely correct. VMT in the Final EIR/EA is analyzed in connection with air quality, climate change, and GHG impacts in Section 3.3; it is not analyzed as a transportation impact herein under CEQA because the NOP circulated for this Final EIR/EA in October 2019 predated July 1, 2020, when the State CEQA Guidelines were amended to provide a general rule that VMT is the most appropriate measure of transportation impacts (see State CEQA Guidelines, §§ 15007 ["Amendments to the [State CEQA] Guidelines apply prospectively only"]; 15064.3 [provisions of this section shall apply statewide beginning July 1, 2020]). Given the unique timing of this Project (NOP almost 10 months prior to implementation of SB 743), and consistent with Caltrans' guidance that projects initiated prior to July 2020 are not required to evaluate projects using VMT, the Draft EIR/EA used the appropriate approach for disclosing impacts associated with both LOS and VMT in an effort to fully disclose information to the decision makers.

The Project does mitigate for VMT and its associated environmental impacts, as shown throughout the Final EIR/EA. Please note Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a

component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, Orange County Transportation Authority (OCTA), San Diego Association of Governments (SANDAG), and San Bernardino County Transportation Authority (SBCTA). By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/Transportation Demand Management [TDM]) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)

- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Response to Comment O-3.2

The commenter is correct that the travel demand model does not fully satisfy the Caltrans checklist for ensuring models are sensitive to induced travel. Specifically, the model lacks a feedback loop to each land use or trip generation that would otherwise make the model more sensitive to changes in land use with modified infrastructure. However, it should be noted that the checklist was published by Caltrans in the *Transportation Analysis Framework* First Edition document, which is dated September 2020. The NOP for the Project was circulated in October 2019, 11 months prior to the checklist being published. As stated in the VMT documentation, with the NOP occurring prior to July 2020, in accordance with Caltrans policy, the Project is not subject to complete VMT assessment.

As noted in response to comment O-3.1, the model still predicted 67-percent VMT growth in the corridor (6.4 million daily VMT growth compared to the existing VMT estimate in the corridor of 9.6 million daily VMT). The argument that the VMT growth in the corridor should have been 69 percent using NCST data instead of model data will not change the results of the Draft EIR/EA assessment. Additionally, as noted in response to comment O-3.1, based on review of the elasticity data prepared by Metro, Riverside County likely would show reduced elasticities using more recent data based on the high commute times already present in the region.

The proposed mitigation (Mitigation Measures **AQ-6** through **AQ-8**) that reduces VMT and its associated impacts for air quality, GHGs, and climate change for the project will

not completely offset the VMT induced by the Project but will greatly reduce the associated impacts during operation.

Response to Comment O-3.3

Please see response to comment O-3.1 regarding the estimation of VMT used in the assessment. Regarding an increase in truck usage, the land use forecast includes more than an additional 3,000 industrial/warehousing jobs within a 2-mile buffer of the corridor. Additionally, the SCAG/Riverside County forecasts included additional industrial/ warehousing jobs growth in the region. This is all reflected in the forecasts developed for the Project. Also, since heavy vehicles are a percentage of the overall fleet mix on the corridor, the growth in VMT of almost 70 percent would also show up as a 70-percent increase in truck VMT along the study corridor. Given the above information, the analysis appropriately incorporates truck VMT that is included into the assessment for the Project GHG impacts.

The comment is correct in stating that the Project would result in an increase in regional VMT and an associated increase in regional air quality emissions. However, the POAQC determination is based on the daily traffic volumes on the Project facility and its effect on local diesel particulate emissions, not the regional VMT. As discussed in the PM Conformity Hot Spot Analysis dated September 28, 2021 (updated March 25, 2025), because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation. Based on this information, U.S. EPA, Federal Highway Administration (FHWA), and Caltrans Headquarters determined that the Project was not a POAQC.

Response to Comment O-3.4

As noted in response to comment O-3.1, the analysis accounts for induced travel in several ways. It uses the regional model to calculate the change in VMT associated with the Project, which was estimated and documented in the report. This reflects induced travel associated with the Project as anticipated by the travel demand model and is appropriate for the environmental assessment.

As noted in responses to comments O-3.1 and O-3.2, the Metro assessment did identify some concerns related to NCST elasticities, as they did not accurately represent observed induced travel in Los Angeles County reflected in more recent datasets. As noted in the referenced responses, average commute time in Riverside County is longer than that observed in Los Angeles County, and, given the high commute times experienced in Riverside County, the NCST elasticities may overestimate induced VMT associated with the Project.

Finally, the operations assessment did still identify areas of congestion along the study corridor. Specifically, where bottlenecks are shifted along the study corridor, congestion did occur at some of those locations specifically.

Response to Comment O-3.5

Comment noted. Please see responses to comments O-3.6 through O-3.8 for responses to the letter attached to the comment.

Response to Comment O-3.6

See responses to comments O-3.1, O-3.2, and O-3.3. It should also be noted that the referenced memo in the comment looked at an option that would build two general purpose lanes instead of two express lanes. However, the Project compares the Build Alternative (Preferred Alternative) to the No-Build Alternative. An alternative with general purpose lanes is in no way connected to the No-Build Alternative, as the addition of two general purpose lanes is not representative of a No-Build Alternative.

The results in the VMT memo presented what the model's prediction of VMT would be with two additional general purpose lanes in each direction as well as two express lanes in each direction and compared both of those to a No-Build Alternative to review induced travel as predicted by the model using short-term elasticities. The VMT assessment shows that not tolling the two new lanes would increase VMT in the corridor by approximately 7 percent, which makes sense—decreasing the cost of travel in the corridor by not tolling the facility would slightly increase VMT. It should be noted that this is comparing two different scenarios, whereas the Volker & Handy study focused on No-Build to Build elasticities and how the long-term elasticity research showed a 1.0 elasticity whether express lanes or general purpose lanes were constructed.

Please see response to comment O-3.1 related to how Volker & Handy's research compared to Metro's research using the same methodology in congested areas of Southern California and Metro's conclusion that perhaps the reduction in VMT was associated with tolling of facilities that were implemented. As previously stated, the RIVTAM model actually showed a short-term VMT increase of 1.6 million VMT/day associated with dual general purpose lane additions, or roughly double what would have been anticipated in the NCST calculator for the same project using a long-term elasticity. This indicates that the model is perhaps more sensitive and estimated higher levels of induced travel relative to what is in the NCST calculator for the addition of general purpose lanes. However, the RIVTAM model has sensitivity to pricing of the express lanes that the NCST calculator does not. Furthermore, it seems completely correct that increasing travel costs would decrease VMT (e.g., when driving is more expensive, people drive less) which is what RIVTAM reflects, while the NCST calculator does not.

Response to Comment O-3.7

Responses to the comments above are generally responded to in responses to comments O-3.1, O-3.2, and O-3.3. One additional response relates to Fehr & Peers' evaluation of RIVTAM that is referenced in comment. Please note that Fehr & Peers' statement that the RIVTAM model does not meet the Caltrans checklist, which was published after the NOP for the Project was developed, is correct. As previously noted, the model does not include a feedback loop to each lane use allocation or trip generation, which is what Fehr & Peers' model review indicated. As noted in previous

responses, the VMT estimated for the I-15 corridor, if the corridor is coded as a General Purpose Lane, had elasticities that exceeded what is used in the NCST calculator, indicating the model may have increased sensitivity to network modification even though it may not have sensitivity to land use allocations.

Additionally, multiple geographies were reviewed to identify what should or should not be used in estimating VMT. Specifically, travel demand models, as they reach convergence, have an allowable "deviation" or allowable "error" in the roadway assignment, which is specified in the model convergence criteria. Although RIVTAM incorporates the entire SCAG region, this allowable deviation creates what is referred to as *model noise*. The issue with larger models (like RIVTAM) is that the larger network increases the amount of model noise and decreases the model's sensitivity to specific projects. In this instance, a 5-mile radius, 10-mile radius, Western Riverside Council of Governments region, Metropolitan Statistical Area region, and SCAG region were all reviewed as potential geographies to use for this assessment. The 5-mile buffered region was ultimately used, as it identified the highest amount of overall VMT growth and reflected induced travel associated with the Project but also minimized model noise. As such, the geography was not chosen to truncate VMT associated with the Project but to maximize the estimated VMT associated with the Project.

Response to Comment O-3.8

Please see responses to comments O-3.1 and O-3.2 in regard to the Project's induced traffic and response to comment O-3.3 in regard to the Project's POAQC determination. The POAQC determination is based on the daily traffic volumes on the project facility and their effect on local diesel particulate emissions, not the regional VMT. As discussed in the PM Conformity Hot Spot Analysis dated September 28, 2021 (updated March 25, 2025), because the new lanes are express lanes where heavy-duty vehicles are prohibited, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation.

The presence of truck trips on the study corridor was estimated using the Riverside County travel demand forecasting model (RIVTAM) after land use was updated to reflect known projects in the study corridor when the NOP was released and when the technical studies were initiated. Through heavy vehicle trips were estimated and are consistent with the RTP/SCS. As such, the model accurately forecasts and assigns heavy vehicle trips to the I-15 corridor based on the assumed land use and the regional estimates of regional truck traffic. As previously noted, the express lanes will not increase capacity or increase the demand for heavy vehicles in the study corridor, because heavy vehicles will be restricted from using the express lanes. Therefore, although there is expected growth in heavy vehicles along the corridor when comparing the Opening Year or Design Year forecasts to the existing condition, there is no change in heavy vehicle volumes between the No Build and Build conditions.

The PM Hot Spot form that was presented to SCAG at the TCWG meeting is titled “PM Conformity Hot Spot Analysis – Project Summary for Interagency Consultation.” Therefore, the reference included in the Draft EIR/EA is accurate.

San Bernardino, CA 92401

RE: Letter of Support for Riverside County Transportation Commission's Interstate 15 Express Lanes Project Southern Extension (ELPSE)

Dear Mr. Heidelberg,

On behalf of the City of Murietta, I am writing to lend our support for the Riverside County Transportation Commission's (RCTC) to the Interstate 15 Express Lanes Project Southern Extension Project (ELPSE). The project will extend the existing express lanes on I-15 an additional 14.5 miles from Cajalco Road in Corona to State Route 74 (Central Avenue) in Lake Elsinore. RCTC is requesting $85 million from SCCP and $25 million under LPP to advance Segment 1 which would extend the existing expressways approximately 5 miles from Cajalco Road to Indian Truck Trail along Interstate 15.

RCTC's full project will add two express lanes in both directions within the existing I-15 median to facilitate mobility in Riverside County. The project advances RCTC's mission to provide a safe, interconnected, and multimodal transportation system. The project will include several benefits regionally including improved traffic operations and increased travel time reliability, expand travel choice and promote safety.

E-1.1

Riverside County is the 10th largest county in the nation by population, with repaid growth occurring due to the regions relative housing affordability and economic opportunities. The project will offset impacts to the I-15 corridor because of population grown, as well as continued growth in the nation's goods movement. The project addresses competing passenger and commercial traffic congestion on I-15, bolstering mobility choice and supporting continued economic development.

While the ELPSE project does not directly address transportation or traffic-related issues within the City of Murrieta, it is essential to consider the integral role that the I-15 freeway has in the daily lives of residents and businesses. The I-15 supports a substantial volume of commuter traffic, serving as a vital link for residents travelling to work, conducting business, and returning home. The efficient flow of traffic along I-15 impacts the community's quality of life, economic

E-1.1 cont.

activities, and overall regional connectivity. The ELPSE project aligns with the city's broader vision of safe, sustainable, and modernized infrastructure.

For these reasons, we strongly support RCTC's ELPSE project. For questions regarding this letter of support, please contact Isaac Bravo, Management Analyst, at (951) 461-6449 or ibravo@murrietaca.gov.

Sincerely,

Lori Stone
Mayor

Response to Comment E-1.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

4.6.4 Individual Comments

4.6.4.1 Comment Letter I-1: Russell Adams

Comment Letter I-1

From: RUSSELL ADAMS
To: 15 Project South
Subject: [EXTERNAL] Stop the toll
Date: Monday, October 14, 2024 5:37:25 PM

I-1.1 The resentment of suffering because you can't afford the tolls will cause the harm that can only resort in class hate.

I-1.2 The gridlock is cause by development. Develop mass transit.
Have an alternative!

Russell Adams
Menifee
Sent from my iPad

Response to Comment I-1.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for high-occupancy vehicle (HOV) 3+ users to use the facility with a transponder for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Response to Comment I-1.2

Regarding the comment related to development, please note that known growth was factored into the Project, including the traffic modeling completed for the Project. The travel demand forecasting for the Project began in 2019 and was completed when the Volumes Report was reviewed and approved by Caltrans on April 30, 2020.

The volumes were developed following a detailed process. First, RIVTAM was used. This regional travel demand model had been updated with future land use assumptions consistent with the SCAG 2016 RTP/SCS (which was the current RTP/SCS available at that time). Additionally, all agencies in the study area (e.g., City of Lake Elsinore, County of Riverside, City of Corona) were part of the PDT and provided input related to

approved and pending developments in the study area (e.g., reasonably foreseeable projects that had applications on file with the agency at the time the analysis was being completed). The information used was from early 2020 and would not reflect any project application occurring after that date. It should be noted that the future year model assumptions use the best available data that were obtained/coordinated just after the NOP was prepared for the Project in October 2019.

The assumed growth for all traffic analysis zones along the study corridor includes substantial growth assumptions—the addition of over 35,000 residential units and over 3,200 industrial/warehousing employees. The growth assumptions were consistent with the information that was available at the time.

For the comment related to development of mass transit, note that rail alternatives are not in the scope of this Project. However, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers that would result in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Please see Section 1.4.7, *Alternatives Considered but Eliminated from Further Discussion*, for further information about other potential Build Alternatives that were considered for this Project.

Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-2.1

Response to Comment I-2.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that the express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

4.6.4.3 Comment Letter I-3: Scott Black

Comment Letter I-3

From: Scott Black
To: 15 Project South
Subject: [EXTERNAL] I-15 Toll lanes
Date: Monday, October 14, 2024 5:06:18 PM

I-3.1 We may the biggest Fuel Tax in the nation, have the highest fuel prices in the Nation. I vehemently oppose anything thing else that will make us pay even more money to drive on our roads!
Those taxes were supposed to help us with our roads. Use that and quit gouging us even more!

Scott G. Black

Response to Comment I-3.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.4 Comment Letter I-4: Damon Bowen

Comment Letter I-4

From: damon bowen
To: 15 Project South
Subject: [EXTERNAL] I-15 toll lanes
Date: Monday, October 14, 2024 5:39:20 PM

To the committee/whom it may concern,

I-4.1 **Toll lanes are often presented as a solution to traffic congestion, but they come with numerous drawbacks that make them less beneficial to society, especially for daily commuters. The most immediate concern is the cost. For many, toll lanes represent an additional tax on top of the income taxes they already pay, placing an undue financial burden on people simply trying to get to work. Commuters, who already face the daily grind of navigating congested roads, should not be expected to pay extra for the privilege of getting to their jobs on time. This is especially unfair to lower-income individuals who are disproportionately affected by toll fees and often have fewer transportation options.**

I-4.2 **Beyond the financial cost, the construction of toll lanes often causes significant inconvenience. Roads are frequently clogged during construction periods, leading to longer travel times and increased frustration for drivers. The construction itself can take years, during which time commuters must deal with detours, lane closures, and a generally more stressful driving experience. This ongoing inconvenience rarely results in significant long-term benefits, as toll lanes often fail to reduce traffic to the degree that was promised.**

I-4.3 **Another issue with toll lanes is the additional traffic congestion caused by entrance and exit points. These access points frequently become bottlenecks, where drivers must merge in or out of the toll lanes, slowing down the overall flow of traffic. Instead of easing congestion, these points often create new areas of delay and confusion, negating any potential benefits of the toll lanes themselves. Moreover, toll lanes can create a two-**

I-4.4 **tiered system on public roads, where those who can afford to pay enjoy faster commutes while others are left to contend with increasingly crowded regular lanes.**

I-4.5 **From a broader societal perspective, toll lanes are a disservice to the public. Roads are a public good, and access to them should not be determined by one's ability to pay. Forcing commuters to pay an additional fee to use these lanes further divides society and erodes the principle that public infrastructure should be accessible to all. Additionally,**

I.4-6 **toll lanes are often marketed as a choice for drivers, but for many, particularly those in highly congested areas, they are less of a choice and more of a necessity. This creates a system where people feel they have no option but to pay extra just to arrive at their jobs in a reasonable amount of time.**

I.4-7 **In summary, toll lanes place an unfair financial burden on commuters, cause long-term inconvenience during construction, contribute to traffic at access points, and ultimately create a system that favors the wealthy at the expense of the general public. Instead of offering real solutions to traffic congestion, toll lanes exacerbate existing inequalities and undermine the idea that public roads should serve everyone equally. For these reasons, toll lanes are not a beneficial solution for society, especially for those who simply want to commute without being taxed further.**

Respectfully,

Damon Bowen

Response to Comment I-4.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow), and provide travel options to all users of the corridor. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free, as discussed in Chapter 1 of the EIR/EA. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

As previously mentioned, the toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities. Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor.

As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in

order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter, a rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching,

customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire. Ultimately, the Project will benefit all users of the corridor.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-4.2

Regarding construction of the Project, the I-15 would remain in operation throughout the duration of construction activities. There are no anticipated long-term closures or detours needed for the Project and no closures of local roads are anticipated. Under the Build Alternative (Preferred Alternative), temporary ramp closures not exceeding ten consecutive days in duration may be needed to complete the ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As identified in Standard Project Measure **TR-1**, Transportation Management Plan, in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays when performing work activities. Potential impacts of road/lane closures are discussed further in the traffic and community sections of the Final EIR/EA.

Response to Comment I-4.3

As detailed in Section 1.3, *Project Description*, of the EIR/EA, six preliminary intermediate express lane access locations throughout the Project limits were evaluated. The access points are located to provide access to all local street and system interchanges and are subject to adjustment, along with toll gantry locations, during the final design phase. Two types of access points are proposed: combined ingress/egress without a weave lane and ingress-only. Two optional express lane access locations are being considered in the southbound direction between El Cerrito Road and Weirick Road. These access points will be refined as the Project moves forward.

Comment Letter I-7

From: stephenepstein13
To: 15 Project South
Subject: [EXTERNAL] Toll Lanes Proposed For 15 Freeway In Southwest Riverside County
Date: Monday, October 14, 2024 9:31:15 PM

I-7.1 Why are there toll roads when our taxes are supposed to be paying for road improvement? Yes, build new lanes to reduce traffic congestion, but with the highest taxes in the country, it's abhorrent that we would be charged as well for public transportation.

Sincerely,

Stephen Epstein
stephenepstein13@gmail.com
951-526-4012

Response to Comment I-7.1

Thank you for your comment. Your opposition to the Project is acknowledged. RCTC began developing tolled express lane facilities to improve mobility in 2006. Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. These improvements reduce delays, allow faster emergency response, relieve local street congestion, and offer better access to public transit and trails.

In addition, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of the Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional

agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

In addition, express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.9 Comment Letter I-9: David Fillis

Comment Letter I-9

From: David Fillis
To: 15 Project South
Subject: [EXTERNAL] Proposed I-15 Toll Road Southern Extension
Date: Monday, October 14, 2024 4:58:58 PM

I-9.1 I support the construction of additional travel lanes on I-15 south to SR-74 in Lake Elsinore under certain conditions.

I-9.2 There must be a provision for no-toll car pool usage of these lanes in addition to those single-passenger vehicles paying for toll-based usage. Otherwise, I do not approve a toll only plan.

1-9.3 The I-15 freeway was constructed with taxpayer money, and any new construction plan needs to include those CA taxpayers who funded the freeway initially, otherwise this would be considered a give-away of publicly-owned resources to a private entity.

David Fillis
Lake Elsinore

Response to Comment I-9.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

Response to Comment I-9.2

Thank you for your comment. Chapter 1 of the EIR/EA discusses how express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-9.3

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. The managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free, as discussed in Chapter 1 of the EIR/EA. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

The congestion-based toll price will vary based on volume of usage to optimize corridor throughput (traffic flow) and will provide the funding source for the Project; any excess toll revenue would be used as a funding source for corridor improvements and repairs. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

4.6.4.10 Comment Letter I-10: Jeff Fose

Comment Letter I-10

From: Jeff Fose
To: 15 Project South
Subject: [EXTERNAL] Please extend the toll road on the 15
Date: Monday, October 14, 2024 6:37:53 PM

I-10.1 Hi, Just weighing in on the proposal to make I15 have a toll extension in Southwest Riverside County. Please do not do this. We will finally have some traffic relief and all that the toll road would do is slow up traffic for most of the citizens that use this every day but allow those that are rich to have priority on our roads. While I could afford the toll roads, I'm against penalizing everyone for the benefit of the few.

Jeff Fose
jlfose@yahoo.com

Response to Comment I-10.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that the express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. Ultimately, the Project will benefit all users of the corridor.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

4.6.4.11 Comment Letter I-11: Joel Foster

Comment Letter I-11

From: Joel Foster
To: 15 Project South
Subject: [EXTERNAL] Toll Lane
Date: Monday, October 14, 2024 5:52:37 PM

I-11.1 Continuing the toll lane is a excellent idea. It would even be better if it went all the way to Temecula Parkway.

Response to Comment I-11.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. The southern end of the Project would terminate at SR-74, which serves as one of the few east–west cross-county network connections, providing connectivity from I-15 to I-215 and to I-5 in Orange County. Therefore, the significance of SR-74 serves as a logical point from a traffic perspective to terminate the southern end of the Project. However, this Project does not prevent the development of future express lanes or other projects that may benefit users in the Temecula Parkway region.

4.6.4.12 Comment Letter I-12: Shannon Gardiner

Comment Letter I-12

From: Shannon
To: 15 Project South
Subject: [EXTERNAL] Toll Lane Comments
Date: Monday, October 14, 2024 4:46:45 PM

Hello,

I-12.1 I am writing in hopes that you will consider changing from a Toll Lane only to a Toll Lane/Carpool Lane. Connecting with the Toll Lane/Carpool Lane in San Diego on the 15 would be a brilliant idea. In addition, making the lane adjustable as they have in San Diego for variances in morning and late afternoon traffic would be perfect. I believe that by having an adjustable carpool/toll lane on the 15 that runs from the 91 and connects to the one in San Diego would be a huge help to our area. Plus, it would be easier to sell the toll lane to the public if the option to use it as a free carpool lane was included. If you poll people in the area, I believe you will find that many people agree. I have discussed this with many other people in the area as well as online, and all of them have agreed that a combo Toll Lane/Carpool lane like the one in San Diego would be best.

Sincerely,

Shannon Gardiner

Response to Comment I-12.1

Thank you for your comment. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

The limits for the Project were chosen to continue addressing congestion relief beyond the original I-15 Express Lanes Project (ELP), which ended at Cajalco Road. This segment targets the next most congested portion of the corridor, extending improvements southward toward growing residential and commuter areas, while aligning with the long-term Measure A commitment to widen I-15 to the San Diego County Line. The selected limits also reflect traffic studies and operational needs identified after the ELP opened, including bottlenecks near the southern terminus. It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

4.6.4.13 Comment Letter I-13: John Garsow

Comment Letter I-13

From: John Garsow
To: 15 Project South
Subject: [EXTERNAL] Toll lane extension
Date: Monday, October 14, 2024 6:38:47 PM

I-13.1 Regarding plans to extend toll lanes on I-15 south towards Ca Hwy 74: my preference would be for a system like That further south on I-15 in San Diego County where car pools 2 or more are allowed free access. At the same time I would hope fines for those who use the lanes but are single occupants would increase exponentially, thus retarding ones desire to cheat. I am a member of fast track and weigh the value for the time savings. Being able to take advantage of Fast track has changed the way I travel SoCals freeway system. Think you seriously need to consider a similar program on I-5 between the I-10/I-5 interchange and CA-134.
Sent from my iPhone

Response to Comment I-13.1

Thank you for your participation in the environmental review process for the I-15 Project. Chapter 1 of the EIR/EA discusses how express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

Subject: [EXTERNAL] Toll road options
Date: Monday, October 14, 2024 9:21:26 PM

I-14.1 Get with SD COUNTY…. We also need one from the 15 and 215 merge in Murrieta all the way down to the 78 in Escondido. It needs to be ALL THE WAY DOWN. We can add or subtract lanes from the center with the wall mover machine just like they do from Escondido all the way down to the 163!!! This would alleviate so much congestion.

I-14.2 I spend two hours a day in the afternoon trying to get home from Miramar to my house off Cal Oaks in Murrieta. Gas and Time! Not to mention pollution from all those cars on the road.

Let's make it happen!!

From my iPhone

r/s,
BP GASTON

Response to Comment I-14.1

Thank you for your participation in the environmental review process for the Project. Improvements along I-15 and I-215 in Murietta and I-15 and SR-78 are beyond the scope of the Project. Please contact Caltrans District 8 at (909) 383-4631 (between 8 a.m. and 5 p.m. Monday through Friday) regarding any concerns or issues for I-215 and Caltrans District 11 for SR-78.

Response to Comment I-14.2

Your comment has been noted. As included in S.4.1, *Purpose*, of the EIR/EA, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice; provide options for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region. Furthermore, the Project is not anticipated to cause or contribute to any new violations of the State and federal standards of the criteria air pollutants.

I-16.1 So let me get this correct, we pay some of the highest road taxes in the US. Now you propose we allow a developer to build a road for profit on public land and then we pay to use the road that's on land our taxes payed for. People are struggling to make ends meets in this area already, this just reeks of a gas vehicle penalty as I understand that electric vehicles get to travel these roads for free. How about we use the money tax payers are paying for their intended purpose making these types of proposals moot. Just a thought!
Sent from my iPad

Response to Comment I-16.1

Thank you for your comment. Your opposition to the Project is acknowledged. The I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. The I-15 express lanes operate under the RCTC name Riverside Express. Additionally, express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. All public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ and motorcycles. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the

date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle use and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

I-21.1 Wow l live in LE, why do l wanna pay a toll to go from one exit to another. I am here 38yrs. We use the freeway to get to shopping n school! Not commuting, l am home. Discount our fees!! Nancy

Sent from my iPhone

Response to Comment I-21.1

Thank you for your comment. Express lanes are traffic lanes that are separated from general purpose lanes; users are charged a toll to use the express lanes. Express lanes in Riverside County are designed to provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. As noted in Chapter 1 of this EIR/EA, all public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ and motorcycles. Ultimately, the Project will benefit all users of the corridor.

Jeff,

I-22.1 I heartily support the extension. I have been commuting on the 15 since 2002 and it has now become the most traffic impacted freeway I drive on.

I live on Clinton Kieth just South of the proposed 15 toll road southern extension.

Further, I've personally seen the significant benefits of the 91 and the recent 10 toll road extensions as I utilize these freeways also.

Sooner the better!

Best,
Michael Jacque

Comment Letter I-29

From: Lisa Patterson
To: 15 Project South
Subject: [EXTERNAL] Toll road
Date: Monday, October 14, 2024 6:03:56 PM

I-29.1 I highly disapprove of this development. Monies would be better spent building light rail, and that would actually be used. Why spend millions of dollars to add new lanes and then profit off of us if we choose to use them? You justify this environment mentally by saying it might lead to more carpooling. Nobody carpools out here. However, if you were to build a light rail system, which would run through the freeways, people would actually use those. And that would definitely have an environmental impact.

Sent from my iPhone

Response to Comment I-29.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region as discussed in Section S.4, *Purpose and Need*, of the EIR/EA. The I-15 express lanes operate under the RCTC name Riverside Express.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. The purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader multimodal enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of

other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

4.6.4.30 Comment Letter I-30: Pam River

Comment Letter I-30

From: Pamela Rosales
To: 15 Project South
Subject: [EXTERNAL] Toll roads
Date: Monday, October 14, 2024 5:41:17 PM

I-30.1 I like the idea of adding toll road lanes to the 15. As long as you don't take away any lanes.

Pam River

"Trust the LORD completely and don't depend on your own knowledge" Proverbs 3:5

Response to Comment I-30.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. As noted in Section 1.3, *Project Description*, of the EIR/EA, two tolled express lanes would be constructed in the median, for a total of four lanes, and no general purpose lanes would be removed.

4.6.4.31 Comment Letter I-31: Denise Robinson

Comment Letter I-31

From: Denise Robinson
To: 15 Project South
Subject: [EXTERNAL]
Date: Monday, October 14, 2024 7:48:19 PM

I-31.1 Why not use what San Diego County has. Toll road that actually encourages 2+ in each car in which the toll is Free!!
Brilliant!
Sent from my iPhone

Response to Comment I-31.1

Thank you for your participation in the environmental review process for the I-15 Project. Chapter 1 of the EIR/EA discusses how express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.32 Comment Letter I-32: Paul Robinson

Comment Letter I-32

From: Paul Robinson
To: 15 Project South
Subject: [EXTERNAL] Toll
Date: Monday, October 14, 2024 5:24:14 PM

I-32.1 How much will it be now 100 bucks??
Paul A Robinson

Please excuse any typos as this is being sent via my IPhone.

Response to Comment I-32.1

Thank you for your comment. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.33 Comment Letter I-33: Frank Rosales

Comment Letter I-33

From: Frank Rosales
To: 15 Project South
Subject: [EXTERNAL] Toll roads on 15
Date: Monday, October 14, 2024 5:39:59 PM

I-33.1 If you can add toll road lanes to what's already there, so no lanes are taken away, I think it's a good idea.

Response to Comment I-33.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. As noted in Section 1.3, *Project Description*, of the EIR/EA, two tolled express lanes would be constructed in the median, for a total of four lanes, and no general purpose lanes would be removed or converted.

4.6.4.34 Comment Letter I-34: Kevin Rosales

Comment Letter I-34

From: kevin rosales
To: 15 Project South
Subject: [EXTERNAL] Proposed extension of the 15 express lanes
Date: Monday, October 14, 2024 7:54:48 PM

I-34.1 I am for extending the fast track on the 15 freeway there is plenty of space to do so. While you guys are at it you should add a general lane for everyone else so much space in that area that it's possible and would serve all those that commute. Unfortunately there's just not enough jobs in the area and everyone has to commute or of the area. It's unfortunate but it's the reality so many people have to commute and more lanes are needed.

Response to Comment I-34.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. The Project proposes two express lanes in each direction along the project limits and does not include additional general purpose lanes. Your comment is noted.

4.6.4.35 Comment Letter I-35: Wesley Scott

Comment Letter I-35

From: Wesley
To: 15 Project South
Subject: [EXTERNAL] I15 Additional Lanes South to Highway 74 in Lake Elsinore
Date: Monday, October 14, 2024 4:53:50 PM

I-35.1 Whereas I agree that additional lanes would be very helpful I can not support them being toll lanes. Toll lanes increase congestion on the non-toll lanes. They price-out anybody who doesn't have serious money…those who pay for their usage.

A better solution to all drivers who use the I15 corridor would be to make then general use lanes, not toll lanes. Isn't that why we pay such high gas taxes? This would be the right place to use such tax revenue. Again, all drives would benefit, not just a few.

Wcscott6@verizon.net

Response to Comment I-35.1

Thank you for your comment. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measure **AQ-5** has been implemented, which assists in minimizing impacts on travelers. Additional Mitigation Measures **AQ-6** through **AQ-8** will also provide increased transit benefits, both regionally and along the I-15 corridor.

As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded

as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes

(https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

The suggestion to convert toll lanes into general purpose lanes is noted. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods, and do not allow trucks to utilize them. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who

prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

4.6.4.36 Comment Letter I-36: RaTasha Smith

Comment Letter I-36

From: RaTasha Smith
To: 15 Project South
Subject: [EXTERNAL] Toll roads
Date: Monday, October 14, 2024 6:35:45 PM

I-36.1 It makes absolutely no sense to keep creating toll roads in California which just keeps going into our pockets. As a home owner and an owner of several cars I feel that I have contributed enough in property tax and DMV fees. It would be different if the toll road was affordable but not when traffic is heavy and it can be as high as $12 dollars one way for approximately 10 miles. California is already outrageous with unnecessary fees we don't need more toll roads. Why not just expand the freeway with no additional cost to the citizens.

RaTasha Smith

Response to Comment I-36.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. The suggestion to expand the freeway by converting the toll lanes into general purpose lanes is noted. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods, and do not allow trucks. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free..

RCTC will also be launching the Riverside County Free Rail Pass Program (https://www.rctc.org/ride-train-free-experience-metrolink-program/), which would offer Metrolink passes to Riverside County residents, starting in 2025, to increase the number of passenger rail riders within Riverside County. RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). The RTA buses would be permitted to use the express lanes at no cost within the Project limits.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

Comment Letter I-43

From: H A
To: 15 Project South
Subject: [EXTERNAL] toll road expansion on I 15
Date: Tuesday, October 15, 2024 8:10:05 AM

I-43.1 I think that more toll roads is unfair for those who are not commuters.
Why not just add another free lane. The I 215 also needs another lane from the I 15 to Hot springs .
The 91 freeway has not changed back up traffic by having the toll roads. Check how few cars are in the toll lanes vs the non toll lanes -
Just open up all the lanes for anyone.

Helen Alexander
hlvpal@gmail.com

Response to Comment I-43.1

Thank you for your comment. RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The suggestion to convert toll lanes into general purpose lanes is noted. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods. By contrast, general purpose lanes are open to all vehicles without any form of demand management, including trucks. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network.

The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also

be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Comment Letter I-45

From: Kim Bradford
To: 15 Project South
Subject: [EXTERNAL] Nope
Date: Tuesday, October 15, 2024 8:32:58 AM

I-45.1 We don't want toll lanes on the 15 fwy to Lake Elsinore. The tolls get more and more expensive. The traffic at the end point is even worse. People out here can barely pay their bills right now. So I guess just rich people would be using them. No thanks. How about take all the gas tax money we pay and get off your asses and widen the freeways FOR EVERYONE!

Kim Bradford
Temecula CA

Response to Comment I-45.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that the express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow), and provide travel options to all users of the corridor. The suggestion to widen the freeway and convert toll lanes into general purpose lanes is noted. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods. By contrast, general purpose lanes are open to all vehicles without any form of demand management, including truck traffic. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

In regard to your comment about equitable pricing of toll lanes, use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of the Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through

increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

I-46.1

Response to Comment I-46.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. The suggestion to open up additional lanes and convert toll lanes into general purpose lanes is noted. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers who choose to use them. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC

launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through

increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

The development of an extensive express lanes network is a key strategy that aims to improve travel time reliability, provide travel choice, and optimize existing freeway capacity within the SCAG region. The Project is needed because the projected growth in the region is expected to place a high demand on existing transportation facilities and services, including public transit.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

I-49.1 A resounding YES from this 24-year veteran of the 91/15 road wars!!! For that matter, why not build it all the way to SR-78 to marry up with San Diego's express lanes! But at least down to the Ortega is a start.

Best,

David Estrada
Murrieta, CA

Response to Comment I-49.1

Thank you for your participation in the environmental review process for the Project and your overall support of the Project. Improvements along I-15 and SR-78 are beyond the scope of the Project.

4.6.4.50 Comment Letter I-50: Michael French

Comment Letter I-50

From: Michael French
To: 15 Project South
Subject: [EXTERNAL] Two Lanes?
Date: Tuesday, October 15, 2024 9:16:24 AM

I-50.1 Why not add one more to the regular traffic and one express lane. Where is the money coming from to build the extra lanes? People work hard to earn what they can and then are penalized in paying for additional lanes that they cannot afford to drive on. Let's get real and help everyone.

Response to Comment I-50.1

Thank you for your comment. RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An additional alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. The I-15 express lanes operate under the RCTC name Riverside Express. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

The Project would provide travel options to any and all users of the corridor through express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Additionally, express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver

would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**), RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in

Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle use, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)

- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Comment Letter I-51

From: JF Personal eMail
To: 15 Project South
Subject: [EXTERNAL] Comments 15 Project South
Date: Tuesday, October 15, 2024 9:38:12 AM

I-51.1 Do away with sound barriers. People purchased their homes next to a highway to save money. We do not have subsidize them. Tolls should be paid to the gov't not private industry (PI). PI just keep raising prices which we DO NOT NEED OR WANT.

Jack Frost
41250 Intrepid Rd
Sage, CA 92544-9500

703-819-7568 (M)
jfrostva@gmail.com

Response to Comment I-51.1

Thank you for your comment. The predicted Project Design-year traffic noise levels were compared to existing (2019) conditions and to the Design-year No-Build conditions. The comparison to existing conditions was included to identify substantial traffic noise impacts that may result from implementation of the Project. Based on the noise modeling and analysis conducted for the Project, traffic noise impacts are predicted to occur at residential and recreational land uses. As such, federal and State law require a project to consider noise barriers per 23 Code of Federal Regulations (CFR) 772 and Caltrans' Traffic Noise Analysis Protocol (see more information about these requirements in Section 2.3.7, *Noise*). Based on studies completed, noise barriers that are found to be both feasible and reasonable will be incorporated. Detailed modeling analysis must show that potential noise barriers meet noise reduction goals, are acoustically feasible, and are reasonable from a cost perspective or they would not be recommended as abatement for the Project. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the northbound I-15 Weirick Road On-Ramp edge of shoulder. The results of the survey indicated majority support for SW1890A + SW1890C (Design Barrier) to be included as part of the Project. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than 50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. The I-15 express lanes operate under the RCTC name Riverside Express. Additionally, express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders with a transponder, and offer transit providers a lane for commuter buses free of charge. All public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ vehicles and motorcycles. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to users along the corridor.

Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Comment Letter I-53

From: Kathleen Herman
To: 15 Project South
Subject: [EXTERNAL] Toll Road Extension
Date: Tuesday, October 15, 2024 7:59:08 AM

I-53.1 I am in favor of the I-15 toll road extension between Cajalco to Route 74. Please ensure a smooth ending that doesn't result in a loss of lanes on either side. Otherwise you just push the bottleneck from Cajalco to 74.
Regards,

Kathi Herman

Response to Comment I-53.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. The comment related to the transition at the terminus of the Project is noted. I-15 will transition to three lanes at the southern end of the corridor (in Lake Elsinore) in each direction (four lanes in the future with a planned managed lane in each direction from Main Street in Lake Elsinore to the I-15/I-215 junction). As shown in Chapter 4 of the TOAR (*Design Variations* section), a variety of alternatives were tested at the express lane terminus section to help identify a lane drop transition that minimizes the bottleneck in that area. (The TOAR is available on the Project website: https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.)

4.6.4.54 Comment Letter I-54: Debbie Lopez

Comment Letter I-54

From: Debbie Lopez
To: 15 Project South
Subject: [EXTERNAL] I-15 Toll Road Extension Corona-Lake Elsinore
Date: Tuesday, October 15, 2024 8:31:57 AM

Thank you for allowing public comments to occur on the plans for a new toll road extension on the N and S I-15 from Corona to Lake Elsinore.

I-54.1 I am against this plan 100%. Californians should not have to pay ridiculous amounts of money to drive on freeways that we already pay the highest taxes on to commute. Californians are doing their best to make ends meet as it is, driving to work to put food on our tables, so why should we pay out the nose to drive there? We already pay the highest gas prices on top of the highest taxes. I have never understood why this State continues to nickel and dine it's citizens.

I-54.2 The only way this would possibly work is if the tolls work like those in San Diego county. They utilize these toll roads as HOV lanes as well, so there is no charge to drive the toll with 2 or more people on board. And the fees are way less than Riverside county.

Please don't add more toll roads to Riverside County, or at the very least if you do, make it work like an HOV lane instead.

Thank you for taking the time to read this email.

Sincerely,

Debbie Lopez

Response to Comment I-54.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Response to Comment I-54.2

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing

ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.55 Comment Letter I-55: Pam Lund

Comment Letter I-55

From: Pamela Lund
To: 15 Project South
Subject: [EXTERNAL] Support for I-15 Toll Lanes
Date: Tuesday, October 15, 2024 11:14:48 AM

Hi,

I-55.1 I'm just writing to express support for the toll lanes project on the 15. We always run into congestion in these areas when traveling to/from OC and would benefit from the expansion of the toll road.

Thanks,

Pam Lund
Murrieta resident

Response to Comment I-55.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

I-57.1 I have no problems with adding additional too lanes. What I have a problem with is the rates as to wish you charge us. These rates need to come down. It is a gouge. I do not have a problem with you making a reasonable amount if money to have in reserve for maintenance and salaries but it would be interesting for you to post for the public to see, just how much your are making.

Sent from my T-Mobile 4G LTE Device

Response to Comment I-57.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

The I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Funding for the Project is expected to be provided through a combination of funds that, while not yet committed, would likely include potential federal and State funding sources as mentioned in Chapter 1 of this EIR/EA.

State law requires that, within 6 months of the close of each fiscal year, the RCTC publish a complete set of financial statements presented in conformity with accounting principles outlined in the United States Generally Accepted Accounting Principles and audited in accordance with generally accepted auditing standards by independent certified public accountants. RCTC's fiscal activities for both I-15 and SR-91, including a summary of RCTC's fiscal activities, are available to the public each fiscal year and can be found at the link below. Financial results are audited on an annual basis, and RCTC has received the Government Finance Officers Association Certificate of Achievement for Excellence in Financial Reporting since Fiscal Year 1993 for its Annual Comprehensive Financial Report.

RCTC's financial reports, including the summary of RCTC's fiscal activities and fiscal activities of the RCTC SR-91 express lanes and I-15 express lanes, are available at the link below:

Subject: [EXTERNAL] Adding Toll Lanes on 15 South

I-58.1 Hello I have to say that I would like to see this however I am VERY concerned at the toll costs. I drive from Temecula to East LA. My route is 15 to 91 to 5 to 710. I am spending around $500 a month out of my own pocket which is very frustrating. I am not one of those people that try to avoid the toll by going in 3 plus lane. I also know that the toll lanes are like driving on the autoban as people drive erratic and fast. I also am concerned because if there is a backup or problem you charge more and don't discount if there was a accident causing the price increase. Why is it cheaper in going to San diego and why do you price gouge us.

Regards,

ROSENDIN

Response to Comment I-58.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

In order to provide safe speed differentials between the express lanes and general purpose lanes, buffer separation would be implemented, consisting of two solid white lane markings with accommodations for channelizers to deter illegal and unsafe access. The express lanes would also be patrolled regularly by the Riverside County Sheriff's Department and California Highway Patrol to enforce speed limits.

4.6.4.60 Comment Letter I-60: Jim O'Donnell

Comment Letter I-60

From: Jim O
To: 15 Project South
Subject: [EXTERNAL] I15 adding toll road south
Date: Tuesday, October 15, 2024 1:12:25 AM

I-60.1 I am strongly disagree to the additional toll lane(s) adding for the 15S between the current (Calama?) to SR74 in lake Elsinore. This in not against adding lanes as we should have additional lanes. What the opposition is to adding more toll roads. We pay so much in taxes and property is so expensive (giving the counties more tax revenue)that any additional lanes should be absorbed and budgeted accordingly to what we can afford in this state.

We should not be spending billions on a high speed train to nowhere that we don't have one track down, or an absorbent amount to support the homeless community- they are homeless how much does it take to improve from there? Or supporting any illegal immigrant over supporting your constituents, the tax payers and ones to keep feeding CA politicians and their own agenda .

I-60.2 Enough is enough on those absurd tolls we have currently. Why are the toll roads allowed to price gouge? That last fire the toll was up to $20 plus one way to OC. I spend alway too much as it is on the current toll lanes. They are ridiculous and you should be ashamed to pitch more!

Strongly oppose the addition of any more toll lanes

Resident and registered voter - riverside county CA

Jim ODonnell

Response to Comment I-60.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Funding for high-speed rail, homeless and/or transient communities, and illegal immigration (as noted in the comment) does not fall under the scope of the Project.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Response to Comment I-60.2

Please note that express lanes are optional and would be an addition to the existing general purpose lanes.

4.6.4.61 Comment Letter I-61: Daniel Salib

Comment Letter I-61

From: Daniel Salib
To: 15 Project South
Subject: [EXTERNAL] Toll road proposal
Date: Tuesday, October 15, 2024 8:55:43 PM

I-61.1 I am deeply frustrated and outraged by the absurd idea of building a toll road. This proposal is nothing more than a blatant money grab, and it's incredibly insulting to expect the public to passively accept it. It shows a complete lack of awareness and empathy for the frustrations of everyday people who rely on these roads. Implementing a toll road will do nothing to solve the existing traffic issues we already endure. On the contrary, it will only worsen the situation by adding unnecessary costs to the already burdensome expenses we face. Are we really supposed to believe that paying for the privilege of sitting in even more traffic is a viable solution? This is beyond frustrating—it's infuriating. The decision-makers behind this plan clearly haven't taken into account the impact it will have on those who have no choice but to use these roads every day. It's as

I-61.2 if they are deliberately ignoring the needs of the public, hoping that we will just roll over and accept this nonsense. But we won't. This plan needs to be scrapped entirely. It's time for those in charge to genuinely listen to the community they are supposed to serve. We are fed up with being treated like cash cows to fund misguided projects like this.

Response to Comment I-61.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. https://www.riversideexpress.com/about#policies.

Response to Comment I-61.2

The Project is a result of extensive public outreach, coordination, and facilitation among several agencies, entities, and the public. In response to growing congestion, Riverside County voters approved Measure A in 1988 to fund transportation improvements. In 2002, Measure A was extended by Riverside County voters through 2039 and included improvements to the I-15 corridor. Since then, engineering, scoping, traffic, and revenue studies have been performed. A scope was developed to both meet the Measure A commitments to voters and to use the revenue from tolling to fund more congestion-relief projects and build more improvements than would have otherwise been possible using Measure A funds and other traditional State and federal freeway funding sources. Furthermore, due to the forecasted population growth and continued development of the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times. As such, the purpose of the Project is to improve and manage traffic operations and travel times along the corridor, as well as expand and maintain compatibility with the express lane network in the region.

4.6.4.62 Comment Letter I-62: Rania Salib

Comment Letter I-62

From: Rania Salib
To: 15 Project South
Subject: [EXTERNAL] 15 Project South
Date: Tuesday, October 15, 2024 8:47:03 PM

I-62.1 I am writing to express my strong opposition to the proposed toll road plan. This project is deeply flawed, unfair, and completely unnecessary. It will only burden the community with more financial strain while providing little to no benefit in return. Adding a toll road will increase congestion, not alleviate it, and disproportionately impact those who rely on these roads daily. The idea that paying additional fees will somehow improve traffic flow is laughable at best and insulting to those of us who already struggle with high transportation costs. Not only does this plan fail to address any of the root problems with our infrastructure, but it also serves as a blatant cash grab that benefits a few at the expense of many. The community doesn't need this, and we certainly don't want it. I

I-62.2 urge you to reconsider this proposal and listen to the actual concerns of the people who will be affected. The consequences of pushing this through without proper consideration will be dire for everyone involved.

Rania Salib

Response to Comment I-62.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers who choose to use them. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Response to Comment I-62.2

The Project is a result of extensive public outreach, coordination, and facilitation among several agencies, entities, and the public. In response to growing congestion, Riverside County voters approved Measure A in 1988 to fund transportation improvements. In

2002, Measure A was extended by Riverside County voters through 2039 and included improvements to the I-15 corridor. Since then, engineering, scoping, traffic, and revenue studies have been performed. A scope was developed to both meet the Measure A commitments to voters and to use the revenue from tolling to fund more congestion-relief projects and build more improvements than would have otherwise been possible using Measure A funds and other traditional State and federal freeway funding sources. Furthermore, due to the forecasted population growth and continued development of the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times. As such, the purpose of the Project is to improve and manage traffic operations and travel times along the corridor, as well as expand and maintain compatibility with the express lane network in the region.

4.6.4.65 Comment Letter I-65: Ricky Tinsley

Comment Letter I-65

From: Ricky Tinsley
To: 15 Project South
Subject: [EXTERNAL]
Date: Tuesday, October 15, 2024 4:57:09 PM

I-65.1 I believe that money could be spent repairing the existing roadways

Response to Comment I-65.1

Thank you for your comment. The Riverside County Transportation Department is responsible for the repair and maintenance of roads within the unincorporated areas of Riverside County; the Cities of Corona and Lake Elsinore are responsible for the repair and maintenance of city roadways; and Caltrans is responsible for the repair and maintenance of State highways and interstates. RCTC operates all existing and future express lanes within Riverside County. Funding for the Project is provided by a combination of local, State, and federal sources.

RCTC uses toll revenue to operate and maintain the express lanes and to repay the loan and bonds issued to fund construction of the new lanes. RCTC reinvests any remaining revenue after these obligations are paid in new transportation improvements to the corridor. The Project is intended to improve and manage traffic operations, throughput (traffic flow), and travel times along the I-15 corridor; expand travel mode choice; and provide a cost-effective mobility solution. Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

4.6.4.66 Comment Letter I-66: Richard Tweedle

Comment Letter I-66

From: Richard Tweedle
To: 15 Project South
Subject: [EXTERNAL] Proposed For 15 Freeway In Southwest Riverside County
Date: Tuesday, October 15, 2024 7:26:00 AM

I-66.1 This should not be a toll road, if anything it should be a HOV lane and extended all the way to Escondido.
If any tax payers money is used at all in the changes they should not be asked to pay for it again for each and every use.

Response to Comment I-66.1

Thank you for your comment. As discussed in Section 1.4, *Alternatives*, of the EIR/EA, an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

As to your comment about extending to Escondido, improvements outside the Project limits are beyond the scope of the Project. Please contact Caltrans District 11 regarding any concerns of issues along I-15 in San Diego County.

The I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

4.6.4.67 Comment Letter I-67: Sean Van Grinsen

Comment Letter I-67

From: Sean Van Grinsven
To: 15 Project South
Subject: [EXTERNAL] I15 Toll Lanes
Date: Tuesday, October 15, 2024 10:01:12 AM

I-67.1 Why can't you call it and HOV lane (free) if 2 or more people are in the vehicle like San Diego?????

Response to Comment I-67.1

Thank you for your participation in the environmental review process for the Project. HOV 3+ is recommended as the minimum occupancy requirement for discounted travel for the I-15 express lanes, consistent with policy recommendations in the SCAG Regional Express Lanes Concept of Operations, the adjoining SR-91 in Orange/ Riverside Counties, and future I-15 express lanes in San Bernardino County. This policy also aligns with the existing practices on the I-15 express lanes in Riverside County and the I-10 express lanes in San Bernardino County. Chapter 1 of the EIR/EA discusses how express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles utilizing the express lanes. Furthermore, under established agreements between RCTC, Caltrans, and FHWA, toll revenues are to be used for constructing, operating, and maintaining I-15 within the Project limits, with toll revenues being subject to audit, and to further fund other eligible transportation-related projects under the Federal-Aid Highways Code (23 United States Code). The toll collection, congestion pricing, and other enhanced technology to be used are similar to those currently operating on existing toll facilities throughout Orange and San Diego Counties.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

4.6.4.69 Comment Letter I-69: Helen Alexander

Comment Letter I-69

From: H A
To: 15 Project South
Subject: [EXTERNAL] toll roads
Date: Wednesday, October 16, 2024 8:26:21 AM

I would like to comment. If you go back east - there are toll roads. These roads can be accessed by any driver. All you need is the toll fee.

I do not know why our toll roads need a special transponder. Why can't we just pay if we are using it - like the 241 used to be. It would provide jobs and there could be a way to insert a credit card to pay for the trip at the time you are there. I-69.1

Those of us that live in the inland empire - cringe at the thought of going west. We may not do it often but there should be some allowance for the few times we go - so we could use the less used toll lanes. I realize that paying at the time may slow some traffic - but maybe one lane entrance could be for at the time payments.

Thank you

Helen A.

Response to Comment I-69.1

Thank you for your comment. The express lanes in Riverside County operate with a state-of-the-art electronic toll collection system that requires a FasTrak transponder. This transponder-based system allows travel without stopping to pay a toll. As of 2023, California is the most populous state in the U.S. according to the U.S. Census Bureau. FHWA identifies California as having the highest traffic volumes in the nation, which has led to significant traffic delays due to population growth and extensive commuting. Because transponders allow for automated toll collection, they reduce the need for toll booths and manual payments, helping to keep traffic moving smoothly. Electronic payment with a FasTrak transponder reduces traffic delay associated with on-site toll collection booths.

Comment Letter I-70

From: Ed Long
To: 15 Project South
Subject: [EXTERNAL] 15 fwy project
Date: Wednesday, October 16, 2024 7:01:38 AM

I-70.1 I think it's a great idea but a 2027 start date is too far out, the project needs to start now. If California department of transportation wants to improve our traffic infrastructure the state needs to speed up the permit process and all the red tape that goes along with it. If the project is approved the bridges that will need to be built should be completely built for the full width of the freeway for quick future freeway lane expansion.

Ed long

Sent from my iPhone

Response to Comment I-70.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. There are several factors that go into a project schedule that can depend on State and federal regulations as well as preliminary studies and design aided by preparation of technical studies and environmental reports, public review periods, funding, and final design before construction can begin. Permit applications from multiple federal and State agencies that are typically submitted during the design phase and approval processes and timelines vary. Once the Project is approved, RCTC expects to use a progressive design-build method to expedite the delivery of the Project. Although subject to change, construction could begin in 2027; however, this would depend on funding availability.

Response to Comment I-70.2

The Project would include widening of up to 15 bridges to accommodate the express lanes. Please refer to Section 1.4.1.1, *Additional Project Features*, of the EIR/EA for details of the proposed bridge improvements. No new bridges are included as part of this Project.

Comment Letter I-71

From: Paul Michaud
To: 15 Project South
Subject: [EXTERNAL] 15 Toll Draft pros
Date: Wednesday, October 16, 2024 4:44:36 AM

Hello,

I-71.1 I am in favor of adding the extension to the I 15 toll roads. Congestion is getting extremely bad. With all the housing that is being built south in LE, rush-hour traffic has been out of standstill. Once the express s 15 lanes end, it is extremely slow to get home. In my honest opinion, the entire infrastructure needs to be expanded. The rate of growth of the population far exceeds the infrastructure currently. I am not sure why this is not already done. It takes me almost 45 minutes to get home and I live off of the diamond Drive exit. extending the southbound lanes to the 74 Highway would greatly expedite traffic flow and get everybody home sooner, instead of having to deal with bumper-to-bumper traffic for 3 miles.

Sent from my iPhone

Response to Comment I-71.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

4.6.4.72 Comment Letter I-72: Griffin Wayne

Comment Letter I-72

From: griffin thewaynes.net
To: 15 Project South
Subject: [EXTERNAL] Southwest Riverside County proposed TollRoads
Date: Wednesday, October 16, 2024 4:05:57 PM

I-72.1 I would like to state that I am in full support of this project. It will enable Southwest Riverside County residences the ability to spend less time on the road, providing better quality of life and use of time.

I also see this sparking a higher demand for real estate within the county as it will enable citizens to commute more easily.

Thanks,

Griffin Wayne

Response to Comment I-72.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

4.6.4.73 Comment Letter I-73: Miriam Jauregui

Comment Letter I-73

From: Jauregui, Miriam
To: 15 Project South
Subject: [EXTERNAL] Concern
Date: Thursday, October 17, 2024 4:36:15 PM

Hi,

I-73.1 The impact will be more money for residents because as of right now I already have an express lane transponder sticker, and it comes out really expansive. Now with more lanes and further down it will be worse to drive to Corona from Lake Elsinore.

The resolution would be that residents can get free access to the fast-track transponder at least from Corona to Lake Elsinore and from Lake Elsinore to Corona. The impact of the jams, accidents and incidents, cars that have issues on the side are taking too long to be resolved.

Miriam Jauregui

mjauregui@elcamino.edu

Response to Comment I-73.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

RCTC currently provides Freeway Service Patrol on various routes to quickly assist stranded motorists and keep Riverside County highways moving.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

A transponder is available for purchase on RCTC's website: https://www.riversideexpress.com/.

Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

Response to Comment I-74.1

Thank you for your comment. RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur.

The I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

4.6.4.76 Comment Letter I-76: Jay Houlihan

Comment Letter I-76

From: Jay Houlihan
To: 15 Project South
Subject: [EXTERNAL] No more toll roads.....
Date: Sunday, October 20, 2024 8:05:11 AM

I-76.1 Tolls road adversely impact working men and women, students, contribute to more pollution, congestion when those lanes could and should be used by everyone not just those with a special sticker or with enough money to justify an additional expenditure just to be able to drive their vehicle somewhere.

NO TOLL ROADS.

Response to Comment I-76.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Furthermore, the Project is not anticipated to cause or contribute to any new violations of the State and federal standards of the criteria air pollutants.

The Project would accommodate all those who commute by providing travel options to all users of the corridor through express lanes and general purpose lanes. As noted in Chapter 1 of this EIR/EA, the express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measure **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the

date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

I-77.1

Response to Comment I-77.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Additionally, express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. As noted in Section 1.1, *Introduction*, of the EIR/EA, all public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ and motorcycles. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

4.6.4.78 Comment Letter I-78: Jason Shelter

Comment Letter I-78

From: Jason Shelter
To: 15 Project South
Subject: [EXTERNAL] Toll Lane Extension
Date: Monday, October 21, 2024 6:51:42 PM

To Whom It May Concern,

I-78.1 I am opposed to this extension. I have witnessed these toll lanes do nothing but move the congestion from one place to another. The cost for using the lanes is out of reach for most commuters. Additionally, the cost to build them can better be used for real solutions to the traffic congestion problem. Finally, commuters would be faced with more delays and a worse commute due to construction of these lanes. A project of this sort would inevitably include taxpayer money. These same taxpayers would then be forced to pay to use it, if they could even afford it.

I-78.2 A better solution would be a dedicated commuter rail line that follows the I-15 corridor. This line was proposed decades ago and never implemented. For all of these reasons, I am opposed to more toll lanes on our freeways. Keep them free and add a layer of commuter rail.

Jason Shelter
Frustrated Commuter

Response to Comment I-78.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Additionally, express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses as discussed in Section 1.1, *Introduction*, of the EIR/EA. All public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ and motorcycles. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Regarding your concerns with traffic delays during construction, no full roadway closures are anticipated during construction; however, temporary ramp closures not exceeding ten consecutive days in duration may be needed to complete ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As identified in Standard Project Measure **TR-1**, Transportation Management Plan, in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays and impacts on pedestrians and bicyclists when performing work activities.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Response to Comment I-78.2

RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC

embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 22, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

CORONA, CALIFORNIA; TUESDAY, OCTOBER 22, 2024,

-OOO-

NAME: Linda Thomson.

ADDRESS: 11424 Summit Court Temescal Valley, California, 92883.

PHONE NUMBER: (949) 303-6258

EMAIL: Linda.axtel78@gmail.com

COMMENT: I live in Temescal Valley, and there is a proposed 6.4 million square feet of warehouses that are going to be directly built next to my neighborhood. It's not been approved by the city yet.

I also understand that in Lake Elsinore millions of square feet of warehouses have been approved by their city council members. I live off of the 15 Freeway. As it is now, going northbound especially, it is -- it is completely jammed up. Many times it will take you an hour to go eight miles. I am very concern with the traffic conditions once these warehouses are built. I-79.1

I am happy that two more lanes are being considered for the 15 Freeway. However, I strenuously object paying a fee every time I need to go on those lanes to go anywhere. I-79.2

I'm very concerned if there is a fire anywhere near us, that we are not going to be able to get out. I live in a retirement -- I live in a 55-plus community. I'm worried if one I-79.3

of us has a heart attack or some kind of medical condition that we need immediate responders, that they're not going to be able to get to us. I-79.3 (cont.)

So that's basically what I have to say. I so oppose having to pay for this. I-79.4

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-79.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the project. The PDT and representatives from the Cities of Corona and Lake Elsinore and Riverside County worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time.

Please note the projects mentioned by the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

In terms of traffic, although the traffic model includes all growth within the SCAG region as a whole, when looking at all traffic analysis zones within a 2-mile buffer of the corridor, it includes over 35,000 new residential units and more than 3,200 “industrial” jobs. Some pending developments that had applications filed after the model was created may not be reflected in the forecasting, but the forecasting will likely be revisited during future project revalidation efforts that would capture some of that additional proposed land use.

Finally, it should be noted that the regional growth included in the forecasting does include regional and subregional forecasts that are based on more aggressive forecasts compared to the current RTP/SCS. Forecasts in the study area using the more recent RIVCOM model, which incorporates updated land use reflecting newer land use forecasts, were also reviewed. This model shows a significantly lower growth forecast compared to what was used in this assessment, indicating a potential need to reassess future infrastructure and development plans.

It should also be noted that I-15 is strategically located and is a vital interstate goods-movement corridor that links Southern California to the Inland Empire, Las Vegas, the Rocky Mountain states, and Canada. It is a primary link between major economic centers and geographic regions and is classified as a “High Emphasis” and “Gateway” route in the Interregional Road System. I-15 is a major truck route and is included in the National Network for Federal Surface Transportation Assistance Act for conventional combination trucks. Its main use is interstate and interregional movement of people and goods. I-15 is also part of the Intermodal Corridors of Economic Significance system of routes, which are significant transportation arteries that provide access to major sea or

waterway ports, nationwide railway systems, airports, and interstate and intrastate highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40.

The new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor.

Response to Comment I-79.2

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-79.3

As noted above in response to comment A-2.5, the Project is included in the 2024–2050 RTP/SCS, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll-free express lane access for emergency responders and law enforcement at all times.

Response to Comment I-79.4

Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Please see response to comment I-79.2 for more information about toll pricing.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 22, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

NAME: Dori Mendoza

ADDRESS: 24445 Overlook Drive, Temescal Valley, 92883

PHONE NUMBER: (909)618-4769

EMAIL: Loviedovie3274@gmail.com

COMMENT: I'm opposed to the extension of the toll roads for multiple reasons. First of all, I don't think foresight has been put into the fact of the additional diesel and freight trucks that are going to be going in because of two major warehouses that are being planned. One, Serrano Commerce Center which will be just below Terramor, which is where I live, and as well as a 4.5 million square foot warehouse that's planned in Alberhill further down the 15 Freeway. I-80.1

Terramor is a community of all ages, so you have young adults and young children, who are just developing, you know, lung issues, lung problems, as well as a 55-plus community who already have existing lung issues, as well as heart conditions. I-80.2

So we're concerned about the health effects, first of all, the warehouses, and then on top of that, extending all the construction that's going to happen concurrent -- by the sounds of it, concurrent with the construction of these warehouses. I-80.3

I just see it as a total nightmare that this would happen at the same time which sounds like it will. I think the developer is planning on starting construction of the Serrano Project in 2026, and if I understand the toll road expansion, that's going to happen in 2027, beginning of 2027. I-80.4

So the fact that they're going to be happening concurrently will just be a nightmare to anybody living on the 15 Freeway, whether you're on the east side or on the west side of the 15 freeway. It's already a nightmare getting in and out of our communities. Adding this additional construction, shutting down -- you would have to shut down at least some of the lanes, even though you're adding two new lanes. You're still going to have to shut down at least one lane in either direction to accommodate construction. And you're just going to be adding additional, you know, turmoil and chaos to an already unlivable condition. That's it.

I-80.4 (contd.)

That I am a disinterested person to the said action.

Dated at San Bernardino, California, this 23nd day of October, 2024.

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-80.1

Thank you for your comment. Your opposition to the Project is acknowledged. RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the Project. The PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time.

Please note most of the projects mentioned in the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

In terms of traffic, although the traffic model includes all growth within the SCAG region as a whole, when looking at all traffic analysis zones within a 2-mile buffer of the corridor, it includes over 35,000 new residential units and more than 3,200 “industrial” jobs. Some pending developments that had applications filed after the model was created may not be reflected in the forecasting, but the forecasting will likely be revisited during future project revalidation efforts that would capture some of that additional proposed land use.

It should be noted that the regional growth included in the forecasting does include regional and subregional forecasts that are based on more aggressive forecasts compared to the current RTP/SCS. Forecasts in the study area using the more recent RIVCOM model, which incorporates updated land use reflecting newer land use forecasts, were also reviewed. This model shows a significantly lower growth forecast compared to what was used in this assessment, indicating a potential need to reassess future infrastructure and development plans.

It should also be noted that I-15 is strategically located and is a vital interstate goods-movement corridor that links Southern California to the Inland Empire, Las Vegas, the Rocky Mountain states, and Canada. It is a primary link between major economic centers and geographic regions and is classified as a “High Emphasis” and “Gateway” route in the Interregional Road System. I-15 is a major truck route and is included in the National Network for Federal Surface Transportation Assistance Act for conventional combination trucks. Its main use is interstate and interregional movement of people and goods. I-15 is also part of the Intermodal Corridors of Economic Significance system of routes, which are significant transportation arteries that provide access to major sea or

waterway ports, nationwide railway systems, airports, and interstate and intrastate highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

As to the concern about an increase in truck usage, the land use forecast includes an additional 3,000+ industrial/warehousing jobs within a 2-mile buffer of the corridor. Additionally, the SCAG/Riverside County forecasts included additional industrial/ warehousing jobs growth in the region. This is all reflected in the forecasts developed for the Project. Additionally, the new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips.

Response to Comment I-80.2

Operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase particulate emissions (PM_{10} and $PM_{2.5}$) compared with existing conditions and decrease reactive organic gas (ROG), nitrogen dioxide (NO_2), and carbon monoxide (CO) emissions. However, conformity analyses demonstrate that the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations, or delay timely attainment of any National Ambient Air Quality Standards or any required interim emission reductions or other milestones during the timeframe of the transportation plan (or regional emissions analysis); refer to Section 2.3.6, *Air Quality*. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. Implementation of Mitigation Measures **AQ-5** through **AQ-8** would mitigate air quality impacts resulting from the increase in vehicle travel by providing increased transit benefits, both regionally and along the I-15 corridor.

Response to Comment I-80.3

Please see responses to comments I-80.1 and I-80.2.

Response to Comment I-80.4

Regarding your concerns with traffic delays during construction, no full roadway closures are anticipated during construction; however, temporary ramp closures not exceeding ten consecutive days in duration may be needed to complete ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As identified in Standard Project Measure **TR-1**, Transportation Management Plan, in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays and impacts on pedestrians and bicyclists when performing work activities. Potential impacts of road/lane closures are discussed further in the traffic section of the Final EIR/EA (Section 2.2.8).

PHONE NUMBER: (951)733-8369

EMAIL: Linda.Oliva@att.net.

COMMENT: My comment is how are we going to accommodate approximately 1,500 additional diesel trucks on the 15 Freeway in the project area after the Serrano Project is built. I-81.1

Okay. So these express lanes, I'm concerned that they will exclude underserved communities because people can't afford to drive in these lanes. So here we go discriminating again. I-81.2

And the other thing that I'm concerned about is this area is a really bad area in air quality, very bad air quality here. And what is -- what are two more lanes on the freeway going to do to our already bad air quality? That's it. I-81.3

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-81.1

Thank you for your comments on the Draft EIR/EA. As to the concern about an increase in truck usage, the land use forecast includes an additional 3,000+ industrial/ warehousing jobs within a 2-mile buffer of the corridor. Additionally, the SCAG/Riverside County forecasts included additional industrial/warehousing jobs growth in the region. This is all reflected in the forecasts developed for the Project. Additionally, the new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips.

Please note the Serrano Project mentioned in the comment should be completing individual traffic studies that would identify needed improvements for that project. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area. The NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5.

Response to Comment I-81.2

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to

public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to

worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve

mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Response to Comment I-81.3

The comment requests information on what impact the addition of the two lanes will have on air quality. Section 2.3.6 of the Final EIR/EA summarizes the short-term construction and long-term operational air quality impacts of the Project. Implementation of the South Coast Air Quality Management District Rules and Caltrans Standard Construction Specifications, which are provided in Standard Project Measures **AQ-1** through **AQ-4** in Section 2.3.6, would avoid or minimize potential short-term air quality impacts on sensitive receptors.

The emissions analysis presented in Table 2.3.6-10 indicates that, when compared to the No-Build conditions, operation of the Build Alternative (Preferred Alternative) would increase the regional criteria pollutant emissions under both the Opening Year (2030) and Design Year (2050) conditions. However, when compared to the existing (2019) conditions, under Opening Year (2030) and Design Year (2050) conditions, the Build Alternative (Preferred Alternative) is expected to decrease ROG, nitrogen oxides, and CO emissions. The PM_{10} and $PM_{2.5}$ emissions would increase with the Build Alternative (Preferred Alternative) when compared to both the existing and No-Build conditions.

As discussed in the September 28, 2021, and March 25, 2025, PM Conformity Hot Spot Analysis forms, because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation. Based on this information, U.S. EPA, FHWA, and Caltrans Headquarters determined that the Project was not a POAQC. Please note that the POAQC determination is based on the daily traffic volumes on the Project facility and its effect on local diesel particulate emissions, not the regional VMT. Therefore, as the ROG, nitrogen oxides, and CO emissions would decrease when compared to the existing (2019) conditions, and the increase in PM emissions would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation, the Project would not expose sensitive receptors to substantial pollutant concentrations.

OFFICIAL COURT REPORTER, CSR NO. 13689

NAME: Maurice Oliva

ADDRESS: 11472 Summit Court, Temescal Valley, 92883

PHONE NUMBER: (951)733-8369

COMMENT: My comment, I guess it's the same as hers (referring to Linda Oliva). How are they going to incorporate the freeway, the 15 improvements, and I'm not sure what the name of this project is -- with the -- with the one that's going to be for the warehouse project -- what do you call it -- with the upcoming warehouses, Serrano Project, in Temescal Valley and warehousing in Lake Elsinore. I-82.1

I understand the city council already approved some new housing for Lake Elsinore. So that will be right there at the end at Central.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 22, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

NAME: Herbert Prosk

ADDRESS: 11424 Summit Court, Temescal, 92883

PHONE NUMBER: (949) 303-6257

EMAIL: Cre8ivherb@gmail.com

COMMENT: I am stunned. We moved from Orange County and had no idea that they were -- they would actually do this, in terms of monetizing lanes that were largely probably Diamond Lanes to begin with. And all of a sudden you monetize them at exuberant rates, depending on the time of day, where you go a few miles, you're paying through the roof.

When we lived in Orange County, when they -- I would say we lived in Dove Canyon. My office was at Jamboree in Irvine. It would take me an hour and a half to get to work. When they built that 241 Toll Road, when they built that toll road, it was a Godsent. It was an absolute Godsent. Rather than taking an hour and half to go to work, I could be in my office in 15, 20 minutes. And at that time, the rate, it didn't fluctuate. It was always 0.25, $0.50 -- whatever it was -- but it was, like I said, unbelievable. I-83.1

But now what's happening is it seems like that whole concept of, you know -- it's all about making money now. And I cannot tell you how many times I've been forced to take the FasTrak or whatever you call it, and you sit there anyways. It doesn't move either. So now to find out they're even monetizing more lanes and a section of freeway that has serious, serious I-83.2

challenges. I-83.2 (contd.)

I am really concerned that -- we live -- when they had the Ortega Fire, people were sitting there. And I know a lot of folks were evacuated and taking alternate -- you know, just blocked the highway. And you know, we can see the freeway from where we live. It's sitting. It's not moving. And I cannot tell you how many times I've had neighbors they've had to go to another -- a Riverside hospital or one of these places and, literally, they've turned around and gone back home and canceled their meetings, their appointments, because of the traffic. I-83.3

So to go and monetize lanes where you're stealing from other lanes that are existing -- and I know they want to build new lanes, but that's going to create a nightmare as well, you know. But like I say, its all just -- it's wrong. You know, I lived in many places, and I've never experienced a place where you have these exorbitant lanes. I-83.4

As far as I'm concerned, Riverside County does not care about people. It's all about whoever and whatever, warehouses, and this and that. Orange County is much more -- you know, much more pro citizen. I don't find that here. If I knew this was going to happen, we never would have moved here. I-83.5

* * * * *

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-83.1

Thank you for your comment. Currently, this segment of I-15 does not include diamond lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-83.2

Please refer to response to comment I-83.1.

Response to Comment I-83.3

As discussed in Section 3.2, *Wildfire*, in the EIR/EA, construction of the median into express lanes would extend the firebreak between the east and west sides of I-15, which is a benefit of the Project. In addition, with implementation of additional lanes on I-15, the Project would have the potential to improve travel time and decrease emergency response times during operation.

The Project is included in the 2024 RTP/SCS, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll-free express lane access for emergency responders and law enforcement at all times.

Response to Comment I-83.4

Please note that the Project would not remove any general purpose lanes. The Project includes an additional two lanes in each direction, constructed in the median, for a total of four lanes. The I-15 express lanes are publicly owned and operated, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor.

Response to Comment I-83.5

Comments on Riverside County and Orange County policies have been noted.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 22, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

NAME: Patrick Rogan

ADDRESS: 24375 Phoebe Drive, Temescal Valley

PHONE: (714)269-5298

EMAIL: Patrick.Rogan@gmail.com

COMMENT: We need general purpose lanes as well. With all the warehouses being built here, and we're not adding any general purpose lanes. Toll ways are one thing. Trucks don't use toll lanes. And there is no alternative, other than Interstate-15 from the 91 south. You can't go on west all the way or east all the way.

And so the only alternative is to drive the 15, and yet they're adding all these lanes, there's all this growth, and they're not adding any gen- -- they're adding one general purpose lane in each direction. I-84.1

And there is room for it. Based on the right of away they're showing, there is room for actually another lane.

And if they want to look at it, going north on the 15, around 6th Street in Norco, when the lane goes from four lanes to three, the freeway backs up going northbound on general purpose. And coming south, it's the same lane. If they would have added one lane, that way traffic wouldn't be so bad.

Response to Comment I-84.1

Thank you for your comment. Your opinion on adding additional general purpose lanes, assuming no express lanes, is acknowledged. However, this approach would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network. The purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor. The Build Alternative (Preferred Alternative) would include the addition of two tolled express lanes in both the northbound and southbound directions within the median of I-15, for a total of four lanes, and was deemed the best option to meet the purpose and need.

That I am a disinterested person to the said action.

Dated at San Bernardino, California, this 23nd day of October, 2024.

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-85.1

Thank you for providing comments on the Draft EIR/EA. The use of rubberized asphalt or other “quieter pavement” types is not currently an approved abatement measure for highway traffic noise (per 23 CFR 772.15(c)), and the analysis of such pavements is not supported by the federally mandated Traffic Noise Model. Therefore, the Project pavement selection is an engineering consideration that is independent of the Noise Study Report. The Project team performed a life-cycle cost analysis, which is an evaluation that compares the economic impacts of different pavement alternatives, in which rubberized asphalt was determined not to be the preferred pavement alternative for this Project. Factors that weighed into the analysis included anticipated longevity of the pavement, initial construction, and long-term maintenance costs.

Based on studies completed, one noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the northbound I-15 Weirick Road On-Ramp edge of shoulder, was found to be both feasible and reasonable and is recommended for construction. Detailed modeling analysis showed that this noise barrier system meets noise reduction goals, is acoustically feasible, and is reasonable from a cost perspective. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than 50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-86.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

Response to Comment I-86.2

Runoff within the Project limits ultimately discharges into Temescal Wash. Temescal Wash begins at the outlet from Lake Elsinore near the Seaport Boat Launch on West Lakeshore Drive. From the outlet, Temescal Wash generally flows northwest for approximately 23 miles before its confluence with Santa Ana River Reach 3 and Prado Dam near the Cities of Norco and Corona. Stormwater that falls on I-15 within the Project limits eventually discharges into Temescal Wash. Please refer to Section 2.3.1, *Hydrology and Floodplain*, of this EIR/EA for detailed a discussion of rainfall runoff in relation to the I-15 corridor.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 29, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

CORONA, CALIFORNIA; TUESDAY, OCTOBER 29, 2024

-OOO-

NAME: Linda Thomson

ADDRESS: 11424 Summit Court, Temescal Valley, California, 92883

PHONE NUMBER: (949) 303-6258

EMAIL: Linda.axtell@gmail.com

COMMENT: I have concerns about the toll roads that are coming in. First of all, I feel that we're paying for this twice. There is a bond that's probably going to go through with the taxpayers. Then we'll be charged usury rates to use the toll road to get to a place. Right now, as it is in Temescal Valley, the 15 Freeway is fairly usable. Many times during the day it's a parking lot. I-87.1

Talking to a gentleman who lives in our community who has a child that is handicapped, to get her to school it takes him an hour to go about eight or nine miles into Corona. Obviously he has to get to work. He's a young 35-year-old. I-87.2

I have concerns about these toll roads coming in at the same time as 6.4 million square feet of warehouses are being proposed for Temescal Valley along Temescal Canyon Road, that is proposed. If it comes through, if the county approves it, construction would start in 2026. I understand that the toll roads -- the medians would be worked on in 2027, so there is an I-87.3

overlap of traffic, where it would be almost impossible for us to get out of our community. I-87.3 cont.

I'm worried about Cleveland National Forest. They frequently have fires. Few months ago they had a fire there. They were evacuating Lake Elsinore. The last time they had a fire, I believe it was 2019 or 2020, they were evacuating the community that I live in. But if you're going to do massive construction at the same time, I worry about us getting out of our community. Mostly concerned if somebody has a health issue of getting us out of our community in a safe and timely manner. I-87.4

And I just feel it's a triple whammy with a bond, paying for this, warehouses possibly coming in with about 1500 trucks a day coming -- of truck traffic. Lake Elsinore has also approved millions of square feet of warehouses. So that is really, really going to impact everything from Temecula on down to the interchange of 91 and 15. I-87.5

I'm very concerned with the air quality. I have an app on my phone called Air Now of the EPA. A few weeks ago when the wind was blowing because we live in a valley and everything goes down into the valley, our air quality at 1:00 p.m. on Thursday -- can't remember the date now -- was 436. A good air quality should be between 440 and 50. I'm concerned about the noise. And I think that's it for right now. I know I have more concerns, but I think that's it for right now. I-87.6

* * * * *

State of California

County of San Bernardino

I, Rebecca Allen, License Number 13689, a Certified Shorthand Reporter of the State of California, do hereby certify:

Dated at San Bernardino, California, this 30th day of October, 2024.

REBECCA ALLEN, CSR

Official Court Reporter, CSR No. 13689

Response to Comment I-87.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-87.2

Your comment regarding your community member's commute is noted. Veterans and disabled veterans are eligible for a discount, as well as HOV3+ riders. Disabled non-veterans are not entitled to a specific discount.

Response to Comment I-87.3

As to the concern about an increase in truck usage, the land use forecast includes an additional 3,000+ industrial/warehousing jobs within a 2-mile buffer of the corridor. Additionally, the SCAG/Riverside County forecasts included additional industrial/ warehousing jobs growth in the region. This is all reflected in the forecasts developed for the Project. Additionally, the new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips.

Response to Comment I-87.4

Your concerns about fires are noted. RCTC understands the importance of addressing these issues and ensuring the safety of the community. The Project is included in the 2024 RTP/SCS, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll-free express lane access for emergency responders and law enforcement at all times. Additionally, during construction, the Project would implement several measures to minimize the risk of wildfires and ensure that emergency response plans are not compromised. Standard Project Measure **TR-1** (Section 2.2.8, *Traffic and*

Transportation/Pedestrian and Bicycle Facilities) would be implemented through the preparation and implementation of a TMP and shall consider construction and alternative route strategies in the event that portions of roadways within the Project limits are restricted during certain construction activities. Standard Project Measure **TR-1** would ensure continuous access and connectivity for emergency travel routes and coordination with emergency service providers. Additionally, the Project shall comply with the emergency operations plans of the County of Riverside, the City of Lake Elsinore, and the City of Corona, each of which outlines procedures for responding to extraordinary emergency situations.

To further reduce wildfire risks, the Project would implement Avoidance and Minimization Measures **FIRE-1** and **NC-3 (NES BIO-1)**, as well as comply with Caltrans Standard Specifications Section 7-1.02M(2), which mandates fire prevention procedures during construction, including a fire prevention plan. These measures are designed to avoid or minimize the risk of fires and ensure that all emergency procedures are consistent with local, State, and federal guidelines.

RCTC is committed to maintaining safety and accessibility for emergency services throughout construction and operation of the Project. By implementing these measures, RCTC aims to address wildfire concerns and ensure the well-being of the community.

Response to Comment I-87.5

Please refer to response to comment I-87.3 above.

Response to Comment I-87.6

For specific Project-related air quality emissions, please refer to Table 2.3.6-9 for construction emission estimates and Table 2.3.6-10 for operational emission estimates in Section 2.3.6 of this EIR/EA. Temporary air quality impacts associated with construction activities as a result of vehicle and equipment emissions and earth-disturbing activities would occur to the surrounding communities. These impacts would be reduced by the inclusion of Standard Project Measures **AQ-1** through **AQ-4**.

The Project is expected to result in a marginal increase in daily regional emissions due to capacity expansion and subsequent increases in vehicle travel along the Project corridor, and would result in an increase in GHG emissions in the Project area compared with existing (2019) conditions. Mitigation Measures **AQ-5** through **AQ-8** will reduce travel and emissions from both construction and operation of the Project.

Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible

participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

The POAQC determination is based on the daily traffic volumes on the Project facility and its effect on local diesel particulate emissions, not regional vehicle travel. As discussed in the PM Conformity Hot Spot Analysis dated September 28, 2021 (updated March 25, 2025), because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation. Based on this information, U.S. EPA, FHWA, and Caltrans Headquarters determined that the Project was not a POAQC.

INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION

PUBLIC HEARING

TUESDAY, OCTOBER 29, 2024

6:00 P.M. - 8:00 P.M.

TRANSCRIBED BY:

REBECCA M. ALLEN,

OFFICIAL COURT REPORTER, CSR NO. 13689

NAME: Susan Felix

ADDRESS: 24226 Sprout Drive, Corona, 92883

PHONE NUMBER: (714) 404-5199

EMAIL: Nwftwa@AOL.com

COMMENT: My concerns are, first of all, the environment; the cost of the project; how it will affect my taxes. I'm also concerned of the traffic that it's going to bring. I mean, even more traffic. I understand that they -- this extra lane will probably be a fast lane, which for the most part there are two big retirement communities in this area. Retirement people do not want to get into fast lanes, so it's not going to benefit us in any way. I-88.1 I-88.2

I also think that the time it takes to do a project like this causes even more congestion. The 15 on a Friday night going south is bumper to bumper, and on Sunday nights, returning, it's bumper to bumper coming back. I don't see that this is going to be beneficial to this part of the community.

* * * * *

Response to Comment I-88.1

Thank you for your comment. Please see Table S-1 of the Final EIR/EA for a summary of the impacts documented in the environmental analysis A toll would be charged to drivers entering the express lanes that are not HOV 3+, transit operators, or emergency personnel. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor.

Response to Comment I-88.2

Regarding the comment on traffic, the analysis included for the Project did identify that, by 2030, southbound I-15 would experience significant congestion without the Project because I-15 generally transitions from six lanes just north of Ontario Avenue to three lanes at Weirick Road. This lane reduction creates the southbound bottleneck that is experienced along the corridor and the Project should help alleviate this by changing that lane reduction from six lanes to five lanes with the Project. Furthermore, the northbound direction currently experiences congestion due to oversaturation that begins around Cajalco Road and extends south. The Project will add a toll option, with an additional two lanes in each direction in the median, to this corridor, for a total of four lanes, which will be beneficial for users.

Thank you for your interest in the I-15 Express Lanes Project Southern Extension. We welcome your comments.
Gracias por su interés en el Proyecto de Extensión de los Carriles Exprés en el Segmento Sur de la Autopista Interestatal 15. Sus comentarios son bienvenidos.

YOUR COMMENTS/QUESTIONS / SUS COMENTARIOS / PREGUNTAS: Where is the $ comming from ~~this~~ for this? Will I have to pay for express lanes? If so where does the $ go? I-89.1

In addition, comments can be submitted by mailing this self-addressed form, or emailing 15projectsouth@rctc.org.
Además, los comentarios pueden ser entregados enviando este formulario por correo, o enviando un correo electrónico a 15projectsouth@rctc.org.

Response to Comment I-89.1

Thank you for your comment. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

A toll would be charged to drivers entering the express lanes that are not HOV 3+, transit operators, or emergency personnel. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

RCTC uses toll revenue to operate and maintain the express lanes and to repay the loan and bonds issued to fund construction of the new lanes. RCTC reinvests any remaining revenue after these obligations are paid into new transportation improvements to the corridor. The Project is intended to improve and manage traffic operations, throughput, and travel times along the I-15 corridor; expand travel mode choice; and provide a cost-effective mobility solution.

4.6.4.90 Comment Letter I-90: Wendell Cole

Comment Letter I-90

From: Wendell Cole
To: 15 Project South
Subject: [EXTERNAL] INTERSTATE 15 EXPRESS LANES PROJECT SOUTHERN EXTENSION
Date: Wednesday, October 23, 2024 9:54:20 AM

I-90.1 In reading the proposal, I have been unable to determine whether or not **carpool lanes** will be included in the project.
Please ensure that additional carpool lanes will be included. We have lost some carpool lanes in the past with express lane construction. This is counterproductive.
Thank you
Wendell Cole
Temecula

Response to Comment I-90.1

Thank you for your comment. As part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. Future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Response to Comment I-91.1

Thank you for your participation in the environmental review process for the Project. Your opposition to the Project is acknowledged. Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Response to Comment I-91.2

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The

goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

This is my first inquiry about this subject.:	Checked
Message:	As a resident of Glen Eden Sun Club in Temescal Valley, I would like to request that a "noise barrier" wall be put up along the stretch of land from Indian Truck Trail to Horsethief Canyon Road. Several future housing developments are planned for the land between Glen Eden and Horsethief. Your plans should include those future new developments. Thank you.
Subscribe to RCTC's E-Newsletter, The Point:	Subscribe

I-94.1

Response to Comment I-94.1

Thank you for your comment. Future land uses were considered as part of the Noise Study Report and environmental document for the Project. Per federal and State requirements (23 CFR 772.11 and Caltrans' *Traffic Noise Analysis Protocol*), all *permitted* development was analyzed in the Noise Study Report. New developments are considered *permitted* on the date of issuance of a building permit by the local jurisdiction or appropriate governing entity. As part of the Noise Study Report for this Project, an extensive outreach effort was conducted with the local jurisdictions, and multiple permitted developments were identified and included in the noise analysis. However, no permitted developments were identified in the area mentioned in this comment. In response to this comment, the Project team has double-checked for permitted developments adjacent to I-15 between Glen Eden Road and Horsethief Canyon Road, but none were identified. Available data from the County of Riverside (https://gis1.countyofriverside.us/Html5Viewer/?viewer=MMC_Public) show parcels in this area that are planned for future development, but no parcels with current active permits. Therefore, while the proposed residential developments may still occur in the future, they are not currently far enough into the permitting process to be analyzed for potential noise impacts or noise barriers.

Based on studies completed, one noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the northbound I-15 Weirick Road On-Ramp edge of shoulder, was found to be both feasible and reasonable and is recommended for construction. This noise barrier system consists of two noise barriers on the east side of I-15 at Weirick Road/Dos Lagos Drive. Noise barrier SW1890A would run along the northbound I-15 edge of shoulder and SW1890C would run along the northbound I-15 Weirick Road On-Ramp ROW. Refer to Figure 2.3.7-3 for a detailed illustration of SW1890A + SW1890C (Design Barrier), including an example cross-section. Detailed modeling analysis showed that this noise barrier system meets noise reduction goals, is acoustically feasible, and is reasonable from a cost perspective. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than 50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

This is my first inquiry about this subject.:	Checked
Message:	I am submitting a public comment in strong opposition to this project. Despite traveling though this corridor semi-regularly, I believe that the decades-long track record of freeway widening projects failing to achieve their stated goals of easing congestion while harming both local and regional air quality, increasing carbon emissions in the middle of a climate crisis, worsening heat island effects, increasing local noise pollution, saddling taxpayers with long-term maintenance costs, and wasting billions in public funds demonstrates that projects like this are simply bad investments. This money could be more productively spent on literally almost anything else, but more specifically on continuing to improve truly sustainable local transportation options through transit, bus, bike, and walking infrastructure.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-97.1

Response to Comment I-97.1

Thank you for your comment. Your opposition to the Project is acknowledged. RCTC began developing tolled express lane facilities to improve mobility in 2006. Express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. These improvements reduce delays, allow faster emergency response, relieve local street congestion, and offer better access to public transit and trails.

RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Furthermore, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects

within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Please refer to RCTC's website for additional information regarding planning and funding of transportation and rail projects in Riverside County:

https://www.rctc.org/funding-and-planning/.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

4.6.4.98 Comment Letter I-98: Lorraine Crooker

Comment Letter I-98

From: Lori Crooker
To: 15 Project South
Subject: [EXTERNAL] Toll lane extension from Corona to Lake Elsinore
Date: Thursday, October 31, 2024 4:00:54 PM

To whom it may concern,

I-98.1 While I appreciate RCTC trying to help congestion, the toll lanes do t work for most people.

I've lived here 32 yrs and congestion has gotten a lot worse. However most people can not afford to use the toll lanes.

In a normal business day or holiday weekend, the toll ranges anywhere from $18 one way up to $30.

A normal working individual or retired person can not afford to pay that. Especially in Riverside county.

We only use the toll roads when they are $5 or less.

Thank you for listening

Lorraine M Crooker
29200 Outrigger St
Lake Elsinore, Ca 92530
Sent from my iPhone

Response to Comment I-98.1

Thank you for your comment. Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

The purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

This is my first inquiry about this subject.:	Unchecked
Message:	Hello, I'm a senior citizen on a fixed income and I'm not in favor of "toll lanes". I personally think they're a ripoff of public monies and highway robbery of citizens. Your rates are outrageous and criminal in my opinion. Who are you to force this injustice on us. We didn't vote for it! You're double dipping using taxpayers money to enrich investors. Bring back HOV lanes and stop stealing money from us. Toll lanes are not making you anyone money and never will. If they do, you'll continue to rip us off. Daniel Heredia, Angry Taxpayer
Subscribe to RCTC's E-Newsletter, The Point:	Subscribe

I-99.1

Response to Comment I-99.1

Thank you for your comment. Your opposition to the Project is acknowledged. As part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. Future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The managed lanes also provide an opportunity for HOV 3+ users with a transponder and motorcycles to use the facility for free. Additionally, all public transit agencies such as buses ride for free on the express lanes. Lastly, please note that it is the individual's choice whether to use the express lanes. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Message:	I am wondering when we will get another freeway through the hills to the beach? Are there plans to make HWY a freeway any time in the future?
Subscribe to RCTC's E-Newsletter, The Point:	Subscribe

I-100.1

Response to Comment I-100.1

Thank you for your comment. There are currently no plans to build a new freeway or highway with direct access to the beach.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Additionally, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of

transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

The Long Range Transportation Study can be found here: https://www.rctc.org/wp-content/uploads/2019/12/RCTC-Draft-LRTS-120119-GV22.pdf.

Message:	Hi, I would like to argue AGAINST this proposal to widen the freeways along I-15. Every bit of research done on the subject has proven time and time again that widening roads and adding additional lanes does not reduce traffic. If you don't believe me, look at the 405 in Los Angeles. The only way to reduce traffic is to provide alternatives to driving. Instead of spending the .6 billion dollars to make the problem worse, I would recommend the DOT use that money to invest in actual public transportation, BRTs, and protected bike lanes. Adding additional lanes would be costly, ineffective, and only make the existing problem more intrenched. Thank you for you time. -Adam Boyer

I-101.2

Response to Comment I-101.1

Thank you for your comment. Your opposition to the Project is acknowledged.

Response to Comment I-101.2

RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County, including additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

This study also identified that if rail was considered along the corridor, it would be accommodated along a former Santa Fe Branch Line between Corona and Lake Elsinore. The study identified the following potential feasible technologies: express bus service (which could also be served in the express lanes), BRT (which also could be served in the express lanes), diesel multiple-unit trains, and commuter rail. The study further estimated ridership on this corridor to be between 126 and 921 riders per day and ultimately was recommended to be included in future plans by RCTC.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include

infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

This is my first inquiry about this subject.:	Checked
Message:	To whom it may concern, I am a concerned resident of the area reaching out to oppose the I-15 Express Lanes Project. The only way to reduce traffic is providing viable alternatives to driving, not by widening freeways. The wider freeway and express lanes may alleviate traffic in the short term, but in the long run traffic will fill the gaps and congestion will be the same if not worse than before the project. I urge the RCTC and CalTrans to reconsider the project and instead focus on spending the money on pedestrian, bicycle, and motor safety improvements as well as expansion and enhancement of public transportation. Doing so will help alleviate traffic by reducing the number of private motor vehicles on the road while increasing safety, air quality, and reducing green house gas emissions. Thank you for your consideration. Sincerely, Yonah

This is my first inquiry about this subject.:	Unchecked
Message:	Dear RCTC, I encourage you not to expand I-15. Robust research has shown that lane expansions induce demand for vehicle travel, which would worsen the air quality problem in the Inland Empire, and the global climate crisis. Furthermore, this is not the best way to spend this money. Better ways to spend the money would include expanding passenger and freight rail, and infrastructure to electrify the systems. For example, building a train station next to the campus of UC Riverside would be a better way to spend this money within Riverside. Adding chargers for electric trucks would be another good way to spend the money. But public money should not be spent on infrastructure that would worsen air quality. Best regards, Narayan Gopinathan

I-105.1

Response to Comment I-105.1

Thank you for your comment. Your opposition to the Project is acknowledged. RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Please refer to RCTC’s website for additional information regarding planning and funding of transportation and rail projects in Riverside County:

https://www.rctc.org/funding-and-planning/.

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the

cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Note that both HOV 3+ users and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability for those users, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region as discussed in Section S.4, *Purpose and Need*, of the EIR/EA.

Operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase particulate emissions (PM_{10} and $PM_{2.5}$) compared with existing conditions and decrease ROG, NO_2, and CO emissions. However, conformity analyses demonstrate that the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations, or delay timely attainment of any National Ambient Air Quality Standards or any required interim emission reductions or other milestones during the timeframe of the transportation plan (or regional emissions analysis); refer to Section 2.3.6, *Air Quality*. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. Implementation of Mitigation Measures **AQ-5** through **AQ-8** would mitigate air quality impacts resulting from the increase in vehicle travel by providing increased transit benefits, both regionally and along the I-15 corridor.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

I-106.1

Response to Comment I-106.1

Thank you for providing comments on the Draft EIR/EA. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

I-107.1

Response to Comment I-107.1

Thank you for providing comments on the Draft EIR/EA. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. Message:	Lane widening is a poor investment for the Inland Empire. I am a student and resident of Los Angeles County who sees significant costs to the whole Southern California region by continuing this project. It is costly, does not decrease congestion because of induced demand, and increases environmental impacts in the region. The project description says it will advance mass transit in the area, but this is not helping mass transit. It will only prove to be a disastrous investment in outdated traffic engineering concepts that contribute to the growth of urban sprawl and the costs passed on to taxpayers. Please do not move forward with this project and instead save this funding for multi modal projects and proven congestion reduction strategies that rely on an understanding of economics and human behavior.

This is my first inquiry about this subject.:	Checked
Message:	The proposed INTERSTATE 15 EXPRESS LANES PROJECT freeway widening is a terrible idea. Southern California needs more rail, bike lanes, walkable neighborhoods, and green space, not more freeway lanes. I get that "the traffic is bad" and people are looking for a solution. I really do. But the solution is living closer to where you work/eat/shop/play. The solution is being able to ride a bike to a neighborhood grocery store. The giant suburban home and the long commute are the ways of the past. Nor will the proposed widening even solve the problem. Because of "induced demand," freeways that get widened consistently turn out to be slow again in a few years, as the traffic demand rises to meet the supply. We know that society, over time, comes to mirror the available infrastructure. We need to build the society that we want, not just more of what we already have. **I-111.1** Programs that double down on the carbon-intensive long-commute lifestyle patterns of SoCal in the 20th century need to be abandoned, and their resources committed to low-carbon lifeways that don't involve lengthy commutes in cars. Please save the millions of dollars that would be spend on this project, and instead commit it to building green, walkable neighborhoods, with strong bus and rail connections for long distance travel. **I-111.2**
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

Response to Comment I-111.1

Thank you for your comment. Your opposition to the Project is acknowledged. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. Message:	Hello, I am in opposition to this project. More lanes do not mean less traffic, In fact, the opposite is true; more lanes make more traffic due to induced demand. Please just reconfigure one lane as an express lane instead of adding more. Car dependency is hurting is in many ways than just emissions. Please do not add any more lanes.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-112.1

Response to Comment I-112.1

Thank you for your comment. Your opposition to the Project is acknowledged. Note that no lanes will be converted to express lanes, but instead the Project proposes two additional lanes in each direction will be built in the median, for a total of four lanes. The commenter is correct that adding travel lanes can lead to induced travel, where increasing roadway capacity encourages more driving, ultimately increasing the traffic volumes along the corridor over time. Additionally, improved facilities can induce demand related to land use (e.g., improved infrastructure increases land values and can increase development in an area).

This commenter suggests an additional alternative, repurposing an existing lane, presumably one in each direction, as an express lane could have been considered as part of the Project. Below is a comparison of this alternative to the purpose of the Project.

Commenter's Suggested Alternative	Project Purpose	Response / Consistency with Project Purpose
Repurpose an existing lane as an express lane (no new lanes added)	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	The commenter expresses opposition to the proposed addition of travel lanes (a total of four lanes) and suggests an alternative approach to reconfiguring an existing lane, presumably one in each direction, as an express lane, rather than expanding the roadway. This alternative reflects a preference for managing traffic demand through operational strategies (e.g., tolling of express lanes) rather than increasing roadway capacity using the same operational strategies. Tolling of express lanes refers to the practice of charging vehicles a fee to use managed lanes on a freeway. Tolling can manage demand and improve travel time reliability but, without additional lanes, it may not increase overall capacity. Therefore, the suggested alternative approach is not consistent with this stated Project purpose.
	Expand travel mode choice along the corridor.	The proposed alternative would expand travel choice in the corridor.

Commenter's Suggested Alternative	Project Purpose	Response / Consistency with Project Purpose
	Provide an option for travel time reliability.	While converting an existing general purpose lane to a toll lane could potentially improve travel time reliability through pricing strategies, it would do so at the expense of reducing travel options for general purpose users. Compared to the Build Alternative (Preferred Alternative), the proposed alternative is less likely to provide overall corridor travel time reliability, because it does not add capacity but rather reallocates it.
	Provide a cost-effective mobility solution.	This purpose would potentially be met if existing lanes are converted to toll lanes.
	Expand and maintain compatibility with the express lane network in the region.	This could be consistent with the regional express lanes network.

As noted in the table above, there are components of a toll conversion alternative that are inconsistent with the purpose of the Project as defined by the PDT.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

I-114.1

Response to Comment I-114.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. RCTC is providing increased transit benefits, both regionally and along the I-15 corridor. In addition to a discounted Metrolink Pass program, RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides

strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

This is my first inquiry about this subject.:	Checked
Message:	We absolutely do not need to be expanding freeways any further. It has been proven time and again that adding lanes does not decrease time spent in traffic, and induces many more gas-powered vehicle trips. It is essential that we make efforts to reduce our dependency on cars, and instead make alternatives to driving more convenient and accessible. This could like like expanding public transit bus and rail projects as well as biking and pedestrain infrastructure.

I-115.1

Response to Comment I-115.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. This is my first inquiry about this subject.:	Checked
Message:	Hi there, I'm reaching out about the I-15 Express Lanes Project Southern Extension because I wanted to express my concern for the project. After years of urban planning and infrastructure research, highway expansion projects have been confirmed to be (1) harmful for the surrounding environment and (2) not improve traffic -- and we get trapped in a cycle of thinking that "1 more highway lane" will reduce the traffic, which doesn't. **I-116.1** I'm an advocate for incorporating express lanes into the I-15 highway because express lanes can modulate traffic for consumers that wish to spend the extra money, and those additional funds can be dedicated to larger urban infrastructure projects. However, I do not believe that adding new highway lanes would decrease the traffic. **I-116.2** Ultimately, I believe the funds for this project are better served developing bike and public transit infrastructure, or developing new parks. **I-116.3** Thank you,
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

Response to Comment I-116.1

Thank you for your participation in the environmental review process for the Project. Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Response to Comment I-116.2

Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor.

Response to Comment I-116.3

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase

capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options. Please refer to the following link regarding RCTC funding:

This is my first inquiry about this subject.:	Unchecked
Message:	Public Comment: I support the expansion of the freeway, am indifferent to the addition of paid express lanes, but absolutely oppose any type of requirement to have any type of "pass" or transponder to use the carpool lane as a carpool when you have these express lanes. The existence of an express lane should not require a carpool to have to get a pass or register for/with anyone when using these lanes as a carpool.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-120.1

Response to Comment I-120.1

Thank you for your comment. The express lanes in Riverside County operate with a state-of-the-art electronic toll collection system that requires a FasTrak transponder. This transponder-based system allows travel without stopping to pay a toll. As of 2023, California is the most populous state in the U.S. according to the U.S. Census Bureau. FHWA identifies California as having the highest traffic volumes in the nation, which has led to significant traffic delays due to population growth and extensive commuting. Because transponders allow for automated toll collection, they reduce the need for toll booths and manual payments, helping to keep traffic moving smoothly. Electronic payment with a FasTrak transponder reduces traffic delay associated with on-site toll collection booths.

Please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Additionally, express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses.

However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

I-122.1

Response to Comment I-122.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Message:	This project is a poor investment in our future. Freeway expansion destroys our natural environment, displaces people who live near the freeway, increases air pollution, and increases the number of vehicle miles traveled. By adding freeway lanes and miles, you are encouraging people to live far from public transportation and increases their reliance on the private automobile. Please end the destruction of public spaces for private use. Instead invest these funds in sustainable transportation options that meaningfully reduce vehicle miles traveled.

4.6.4.124 Comment Letter I-124: Angelo Mike

Comment Letter I-124

From: Riverside County Transportation Commission
To: 15 Project South
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension (ELPSE) - Project Page Contact Form
Date: Wednesday, November 6, 2024 7:30:41 AM

I WOULD LIKE TO: *:	Add my contact information to the I-15 Express Lanes Project Southern Extension database
First Name:	Angelo
Last Name:	Mike
Email:	mmike10371@msn.com
This is my first inquiry about this subject.:	Checked
Message:	I'm calling on you at Riverside County Transportation Commission and Caltrans to oppose widening of I-15. I think the fact that anyone's mindset that this 15 mile widening should even be considered to be a huge symptom of lack of education and concern about the well being of people in the region and our neighbors. Highway widening further entrenches racial and class inequities. More lanes means drivers use those lanes, and more emissions. The rates of childhood asthma in southern California is an outlier in America in how high it is. The return on building these lanes is a negative, a loss. The capacity for highway lanes is nowhere near what it is for bike paths, trains, pedestrian paths, and buses. It mainly is a handout to auto executives and the oil industry, which don't pay into this infrastructure that they utilize to sell overpriced, over engineered cars for. It will give some benefit to the drivers who can afford the $10k/year or so cost of owning and operating a car. And in doing so, it helps shut out lower income people, largely Black and brown people, Latinos, immigrants, people with disabilities who can't drive, the elderly, and the very young who can't drive. In other words, the very people who need the most to have frequent, reliable public transportation and bike infrastructure. **I-124.1** A highway widening mainly gets one person in one car traveling, neglecting those who need transit. Yet a bus, metro, and bike paths get many thousands and millions more traveling. They have way more capacity. **I-124.2** This is a climate catastrophe issue. We can't drive our way out of climate collapse. We can't make cities solvent through massive car infrastructure projects when transit has been shown around the world to be of a much greater benefit to city revenues and as a matter of equity and freedom of mobility. **I-124.3** So this $500 million or so project also requires long term maintenance, and it requires a $10k/year or so fee for people to drive cars and rely on the predatory loans, dealerships, and oil industry that it helps keep propped up. Meanwhile, the **I-124.4**

	people who need transit the most are shut out by this decision.	I-124.4 cont.
	Do not go forward with highway widening. Take the lessons from so many cities around the world where millions more people get around in better connected, more humane, climate resilient, livable cities, come out in strong opposition to highway expansion, and come out in support of the least of us who deserve safe, reliable transportation.	I-124.5
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked	

Response to Comment I-124.1

Thank you for your participation in the environmental review process for the Project. Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Additionally, toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial

barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle use and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the

Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Response to Comment I-124.2

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris,

RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Response to Comment I-124.3

RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur.

Your comment on climate change is noted. RCTC and Caltrans take climate change seriously and include a climate change analysis. Please see Section 3.3, *Climate Change*, of the EIR/EA for a project-level analysis and proposed mitigation measures.

Response to Comment I-124.4

The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Response to Comment I-124.5

Your opposition to the Project is acknowledged.

4.6.4.125 Comment Letter I-125: Leslie Ngo

Comment Letter I-125

From: Riverside County Transportation Commission
To: 15 Project South
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension (ELPSE) - Project Page Contact Form
Date: Tuesday, November 5, 2024 5:29:21 PM

I WOULD LIKE TO: *:	Add my contact information to the I-15 Express Lanes Project Southern Extension database
First Name:	Leslie
Last Name:	Ngo
Email:	Leslie.Dec07@gmail.com
This is my first inquiry about this subject.:	Checked
Message:	After hearing about the plans to expand Interstate 15 in Riverside County, I am concerned and call on you to end the expansion and allocate funding to invest in public transportation, cycling and pedestrian infrastructure. Expanding highways might seem like a logical answer to reducing traffic congestion, but it actually isn't based on a concept called induced demand. Induced demand is when there is congestion, demand for freeway expansion and road widening occurs. The government then funds and widens freeways to temporarily relieve traffic. But overtime, along with urban sprawl, will only encourage and entice people to drive. This is especially true when there is a lack of safe, convenient, and reliable alternate modes of transport like public transportation, cycling and pedestrian infrastructure. That leaves the widened freeway back to its original congested state, and the demand for widening the freeway comes back. Think about how many freeways the LA region already has, yet the region is ranked as the worst congested places in North America. It is clear expanding freeways and building more lanes for cars will not work to truly reduce congestion. Instead, there are different approaches you can take that are more effective and have the results to reduce congestion. People often drive because they have somewhere to go that is far and not reliably accessible through public transit. Investing, expanding and improving public transportation will not only provide people with a reliable transit system, but also funds a system that accommodates everyone. Not everyone is able to drive due to financial constraints, impairment or legality reasons.

I-125.1

I-125.2

It is also good to know that cars take up so much road space. Picture a freeway with cars with only a single occupant vs an elevated train carrying 100 people. The elevated train requires way less space to transport 100 people than 100 cars on a freeway.

I-125.2 cont.

Investing, expanding and improving cycling and pedestrian infrastructure is also important.

Funding, building and safeguarding protected cycling lanes and bike parking will ensure safety for cyclists and entice people to bike to their destination. It is also a healthy and environmentally-friendly mode of transport that does not require heavy maintenance costs like road maintenance for cars.

As for pedestrian infrastructure, this could look like widened sidewalks, street trees and public street plazas to entice people to not only walk but enjoy community gatherings and events in their communities. This could also look like converting decommissioned railroad tracks or powerline lands into pedestrian walkways that come with benches, metro bins, playgrounds, native shrubs and trees, murals, etc.

I-125.3

Lastly, allowing and developing mixed-use developments, especially close to transit stations, goes a long way in reducing the reliance on cars for commuting. Separated zoning like residential zones on one side of a city and commercial and industry on the other forces residents to drive to their destination. Providing places for people to live, work, shop, play and take part in community in close proximity to each other reduces the demand and decision for driving.

Therefore, I am calling on you to end the plans for freeway expansion and allocate funding to build and improve other sustainable, healthy and cost-effective modes of transport. When working with roads, remember this: everyone can be a public transit user, a cyclist and pedestrian, but not everyone can, or should, be a driver. So let's create a road system that works for everyone.

I-125.4

Subscribe to RCTC's E-Newsletter, The Point: Unchecked

Response to Comment I-125.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. The commenter is correct that individuals tend to drive more when travel time is improved and the cost associated with driving along a corridor is decreased. This phenomenon is commonly referred to as *induced travel* and is captured in the analysis for the Project.

Adding express lanes improves travel choice. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability for those users, which also improves travel choice. As noted, the Project will not benefit rail, biking, or walking facilities.

Response to Comment I-125.2

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. The purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader multimodal enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

Response to Comment I-125.3

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

Response to Comment I-125.4

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

4.6.4.126 Comment Letter I-126: Tony Nguyen

Comment Letter I-126

From: Riverside County Transportation Commission
To: 15 Project South
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension (ELPSE) - Project Page Contact Form
Date: Tuesday, November 5, 2024 11:21:56 AM

I WOULD LIKE TO: *:	Add my contact information to the I-15 Express Lanes Project Southern Extension database
First Name:	Tony
Last Name:	Nguyen
Email:	aolsloth@hotmail.com
This is my first inquiry about this subject.:	Checked
Message:	Hello, No more highway widening. The money spent on this project could easily fund transit, bike and bus improvements instead and help reduce reliability on cars/trucks and mitigate the effects of climate change.

I-126.1

Response to Comment I-126.1

Thank you for providing comments on the Draft EIR/EA.

As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by

RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification,

stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Furthermore, RCTC understands that residents of Riverside County and users of I-15 within the Project limits may want additional travel modes like walking, biking, and transit. Some of these are being planned through the County and RCTC (like the planned Butterfield Stage trail project and the Next Generation Rail Study). Additional information on this Butterfield Stage trail project is available at: https://rivcoparks.org/sites/g/files/aldnop306/files/migrated/-files-ugd-691623-32062b8af6f64f558cebb3eddfc0a04a.pdf. This link provides information that is publicly available at this time. Additionally, there are currently Class II bike facilities along Temescal Canyon Road, which generally parallels the freeway through most of the corridor.

The following table provides a consistency summary of the purpose and need compared to the commenter's suggestion of bike lines instead of the Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Add a bike lane	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	Bike lanes do not manage traffic operations, throughput, or travel times along the corridor. As such, this alternative would not be consistent with the purpose and need of the Project. Furthermore, all of the trips expected to use the express lanes are longer than 6 miles in length; this distance exceeds the typical length of most bicycle trips along the corridor. Based on these facts, the alternative would not be consistent with the purpose and need of the Project.
	Expand travel mode choice along the corridor.	This alternative may not expand travel mode choice because the parallel bicycle facilities will ultimately be there already and the elimination of a general purpose lane that has full demand today would decrease choice for that specific mode.
	Provide an option for travel time reliability.	Bike lanes would provide travel time reliability for bicyclists, but would do nothing to improve travel time reliability for any other travel modes.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
	Provide a cost-effective mobility solution.	Bicycle lanes tend to be the costliest mobility solutions when reviewing person throughput per dollar of infrastructure improvement. Bikeways tend to not be heavily utilized in the Inland Empire, resulting in a low throughput per dollar spent on the facility.
	Expand and maintain compatibility with the express lane network in the region.	The bike lane alternative would not be compatible with the regional express lanes network because it would create a gap in the proposed managed lanes to the south and the existing managed lanes to the north.

RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Furthermore, RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and

bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Email:	nsundback@verizon.net
This is my first inquiry about this subject.:	Unchecked
Message:	I oppose this project. RCTC should toll existing lanes so the freeway pays for itself. This type of project is prone to delays and cost overruns. Furthermore, there is no reduction in congestion afterwards. See the 405 widening between the 10 and 101 as Exhibit A. RCTC should instead expand all-day, frequent bus service and Metrolink to Temecula and Murrieta.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-127.1

Response to Comment I-127.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. I-128.1

Response to Comment I-128.1

Thank you for your comment. RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Please refer to RCTC’s website for additional information regarding planning and funding of transportation and rail projects in Riverside County:

https://www.rctc.org/funding-and-planning/.

As described in Chapter 1 of the EIR/EA, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year

(2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

This is my first inquiry about this subject.:	Unchecked
Message:	I'm writing to express my opposition to the planned Express Lanes project on I-15. Highway widening has repeatedly shown limited long-term benefits in reducing traffic congestion and often leads to increased emissions and vehicle dependency, known as "induced demand." Rather than investing $550-650 million in freeway expansion, I urge you to consider reallocating these funds toward sustainable and accessible transit solutions, such as improved bus services, bike lanes, and other public transit initiatives. Such investments would not only support a greener future but also create a more equitable and resilient transportation network. Thank you for considering this perspective. Sincerely, Nick Cron-DeVico

Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It provides strategic

guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

This is my first inquiry about this subject.:	Checked
Message:	Research has shown over and over again that widening highways first not reduce congestion. It indicates demand and highways immediately fill to capacity. It's insane to keep doing the same thing despite the fact that it never accomplishes the desired result. Plus the cost to our collective health are too great - increased air pollution, noise pollution, traffic fatalities and injuries, and disruption of neighborhoods. No more highway widening. The money spent on this project could fund transit, bike and bus improvements instead. Give us transportation options that actually work at moving people, not the option that has failed every time.

I-132.1

Response to Comment I-132.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. RCTC is providing increased transit benefits, both regionally and along the I-15 corridor. In addition to a discounted Metrolink Pass program, RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides

strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Phone:	9494394284
This is my first inquiry about this subject.:	Checked
Message:	I am deeply concerned about the negative impact this project will have on the financial and environmental health of the region. It has been proven that adding more highway lanes does not improve traffic in the long run. I don't want our tax payer money towards something that won't help with congestion. I think we should prioritize adding a Metrolink extension along the 15 between Corona and San Diego. If not a Metrolink extension, then dedicated bus lanes should be implemented. I don't agree with the current proposed scope.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-133.1

Response to Comment I-133.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region as discussed in Section S.4, *Purpose and Need*, of the EIR/EA. The I-15 express lanes operate under the RCTC name Riverside Express.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

RCTC is providing increased transit benefits, both regionally and along the I-15 corridor. In addition to a discounted Metrolink Pass program, RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. The purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris,

RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

This is my first inquiry about this subject.:	Checked
Message:	No more highway widening. This will induce demand and this project will not be successful at reducing traffic congestion or improving travel times. This money should be spent on public transit, bike and bus improvements instead. Giving people other options than driving is the only way to reduce traffic congestion and reduce travel times for those who must drive. Plus it would be epic to have North South transit connection to the Vegas Brightline!
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-134.1

Response to Comment I-134.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region as discussed in Section S.4, *Purpose and Need*, of the EIR/EA. The I-15 express lanes operate under the RCTC name Riverside Express.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

RCTC is providing increased transit benefits, both regionally and along the I-15 corridor. In addition to a discounted Metrolink Pass program, RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Although RCTC acknowledges the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. The purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader multimodal enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris,

RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Please note that a transit connection to Brightline is beyond the scope of this Project.

4.6.4.135 Comment Letter I-135: Ann Dorsey

Comment Letter I-135

From: Riverside County Transportation Commission
To: 15 Project South
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension (ELPSE) - Project Page Contact Form
Date: Saturday, November 9, 2024 9:29:24 AM

I WOULD LIKE TO: *:	Add my contact information to the I-15 Express Lanes Project Southern Extension database
First Name:	Ann
Last Name:	Dorsey
Email:	aedorsey@hotmail.com
This is my first inquiry about this subject.:	Checked
Message:	Project Team, I urge you to find alternatives to freeway widening projects and consider the following when making your decision: - How much will this project increase VMT (vehicle miles traveled), greenhouse gas emissions and air pollution in general and in vulnerable neighborhoods adjacent to the highway specifically? **I-135.1** - The funding necessary for this project would be better spent on making public transit more competitive or walking & biking. **I-135.2** Freeway widening does NOT reduce traffic congestion. Please prioritize smart, effective, safe and clean transportation choices instead. **I-135.3** Thank you, Ann Dorsey
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

Response to Comment I-135.1

Thank you for your comment. In response to VMT increases between the No-Build and the Build Alternative (Preferred Alternative), the Project was estimated to increase VMT by 125.8 million by Design Year (2050) (e.g., induced travel associated with the Project). Under Opening Year (2030) conditions, the Build Alternative (Preferred Alternative) would lead to an increase in annual VMT. This is expected to increase between the Existing (2019) and the Opening Year (2030) scenarios. The expected increase in VMT across all alternatives, including the No-Build Alternative, is a result of land use growth and population growth assumed in the future year travel demand model. Operational emissions were modeled using the CT-EMFAC2021 model. Please refer to Table 3-5 in Chapter 3 of this EIR/EA for modeled annual VMT.

Projected construction GHG emissions were calculated for the Project using the Sacramento Metropolitan Air Quality Management District Roadway Construction Emissions Model and estimated to total approximately 5,444 metric tons of carbon dioxide equivalent over the course of the approximately 3-year construction period. Operational GHG emissions under the Build Alternative (Preferred Alternative) would increase in the Design Year (2050) compared to existing (2019) conditions. Mitigation Measures **GHG-1** through **GHG-4** and **GHG-11**, as well as Standard Project Measures **EN-1** and **AQ-4**, are expected to reduce construction GHG emission impacts from the Project. Mitigation Measures **GHG-5** through **GHG-10** would reduce the GHG emission impacts from operation and maintenance of the Project. In addition, Mitigation Measures **AQ-5** through **AQ-8** will reduce VMT and its associated GHG impacts. Please refer to Chapter 3 of this EIR/EA for additional information on GHG emissions.

For specific Project-related air quality emissions, please refer to Table 2.3.6-9 for construction emission estimates and Table 2.3.6-10 for operational emission estimates in Section 2.3.6 of this EIR/EA. Temporary air quality impacts associated with construction activities as a result of vehicle and equipment emissions and earth-disturbing activities would occur. These impacts would be reduced by the inclusion of Standard Project Measures **AQ-1** through **AQ-4,** and Mitigation Measure AQ-5. The Project is expected to result in a marginal increase in daily regional emissions due to capacity expansion and subsequent increases in VMT along the Project corridor, and result in an increase in GHG emissions in the Project area compared with existing (2019) conditions. Mitigation Measures **AQ-6** through **AQ-8** will reduce air quality impacts resulting from VMT during Project operation.

As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in

order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching,

customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Please note that the POAQC determination is based on the daily traffic volumes on the Project facility, and its effect on local diesel particulate emissions. As discussed in the September 28, 2021, PM Conformity Hot Spot Analysis (updated March 25, 2025), because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a

significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation. Based on this information, U.S. EPA, FHWA, and Caltrans Headquarters determined that the Project was not a POAQC.

Response to Comment I-135.2

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability for those users, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region as discussed in Section S.4, *Purpose and Need*, of the EIR/EA. The I-15 express lanes operate under the RCTC name Riverside Express.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Although RCTC acknowledges the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. As mentioned above, the purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader multimodal enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize

potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Response to Comment I-135.3

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

COMMENTS/QUESTIONS

I-136.1 As part of your environmental studies, how have you kept up with the rapid residential growth along the 15 south of Corona through Temescal Valley down to and beyond Lake Elsinore? And have your plans included the impact of large industrial projects, specifically warehouses planned (but not yet approved) along the 15 through Temescal Valley? Currently a project for about 6 million square feet of warehouse space in several buildings with many hundred truck bays is under consideration. Adding many hundred more trucks to the daily commute mixed in with auto traffic is a really bad idea. It's already a dangerous situation – slow trucks entering and changing lanes when the opportunity arises and cars needing to enter and exit for work, school, doctor appointments, etc. The roads already take a beating, and side roads are often jammed. They were clearly never expected to carry this much traffic. Just as dangerous but less visible is the air pollution caused by vehicle exhaust. The air quality through Temescal Valley already often exceeds what is considered 'acceptable'.

I-136.2 As a resident of Temescal Valley I recognize the need for improved traffic flow, and the added lanes should make a difference. However, not everyone who uses the highways can afford to pay tolls; a carpool HOV lane makes more sense and would allow more people to commute affordably and safely. At the very least, no further truck traffic should be encouraged or allowed on that stretch of the 15. Any more huge warehouses will make Riverside County like San Bernardino County, famous for the worst air pollution in the country. Who would want to live in a place like that? You have an opportunity to do it right.

Come down to Elsinore on any weekday morning and see what it's like getting into Orange County via 15 and 91 through Corona. Or leave Orange County on a Friday afternoon and come through Corona to Elsinore or Riverside. I bet it's worse now than when you first started planning the extension.

Response to Comment I-136.1

Thank you for your comment. Future land uses were considered as part of the environmental document for the Project. Due to the forecasted population growth and continued development of the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times. Through implementation of two additional tolled express lanes in each direction on I-15 in Riverside County and multiple entrance and exit points to access the tolled express lane facilities, the Project would maximize mobility in the region by improving operational safety and efficiency.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users with a transponder. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles utilizing the express lanes. RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the Project. The PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time.

Please note that the projects mentioned in the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

In terms of traffic, although the traffic model includes all growth within the SCAG region as a whole, when looking at all traffic analysis zones within a 2-mile buffer of the corridor, it includes over 35,000 new residential units and more than 3,200 “industrial” jobs. Some pending developments that had applications filed after the model was created may not be reflected in the forecasting, but the forecasting will likely be revisited during future project revalidation efforts that would capture some of that additional proposed land use.

It should also be noted that I-15 is strategically located and is a vital interstate goods-movement corridor that links Southern California to the Inland Empire, Las Vegas, the Rocky Mountain states, and Canada. It is a primary link between major economic centers and geographic regions and is classified as a “High Emphasis” and “Gateway” route in the Interregional Road System. I-15 is a major truck route and is included in the National Network for Federal Surface Transportation Assistance Act for conventional combination trucks. Its main use is interstate and interregional movement of people and

goods. I-15 is also part of the Intermodal Corridors of Economic Significance system of routes, which are significant transportation arteries that provide access to major sea or waterway ports, nationwide railway systems, airports, and interstate and intrastate highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

Response to Comment I-136.2

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and*

Cohesion, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Comment Letter I-137

From: Jackson Hurst
To: 15 Project South
Subject: [EXTERNAL] Interstate 15 Express Lanes Project Southern Extension Environmental Impact Report and Environmental Assessment (EIR/EA) Public Comment
Date: Wednesday, November 13, 2024 1:51:12 PM

Name - Jackson Hurst

Address - 4216 Cornell Crossing, Kennesaw, Georgia 30144

I-137.1 Comment - I have reviewed the Environmental Impact Report and Environmental Assessment (EIR/EA) for Caltrans/RCTC's Interstate 15 Express Lanes Project Southern Extension and I support the findings and build alternative in the document. The reason I support the build alternative for Caltrans/RCTC's Interstate 15 Express Lanes Project Southern Extension is because it will add 2 Express Lanes to I-15 from El Cerrito Road to CA-74/Central Avenue which will improve safety, reduce congestion, and improve travel times on I-15 from Corona to Lake Elsinore, CA.

sent from ghostlightmater@yahoo.com

Response to Comment I-137.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project.

This is my first inquiry about this subject.:	Unchecked
Message:	Re: Proposed i15 express lane southern extension Project

Dear RCTC,

I am writing to express my strong opposition to the proposed freeway lane widening project. Based on evidence from similar projects, this project will have significant negative environmental impacts and fail to meaningfully improve long-term traffic congestion.

Environmental Impact
Research has shown that expanding highway capacity often leads to increased vehicle miles traveled and higher overall emissions.[1] A study of 76 highway widening projects found that in the long run, traffic volumes increased by 93% of the new lane capacity on average.[2] This "induced demand" effect undermines the project's environmental benefits.

I-138.1

Additionally, widening freeways can disrupt local communities, destroy green spaces, and increase noise and air pollution. Evidence suggests these impacts disproportionately harm lower-income and minority neighborhoods.[3]

I-138.2

Ineffective for Traffic Relief
While highway expansions may provide short-term relief, the long-term effects are far less promising. Multiple studies have found that new highway capacity is rapidly consumed by induced traffic, providing little sustained improvement in congestion.[4] One analysis determined that the average reduction in travel time from highway expansions dissipates within 5 years.[5]

Given the significant environmental costs and limited long-term traffic benefits, I urge you to reconsider this project. Instead, I recommend focusing infrastructure investments on public transit, active transportation, and transportation demand management strategies - approaches proven more effective at reducing

I-138.3

congestion and emissions in a sustainable manner.

Thank you for your consideration.

I-138.3 cont.

Sincerely,
Nolan King

Response to Comment I-138.1

Thank you for your comment. Your opposition to the Project is noted. The commenter is correct that individuals tend to drive more when travel time is improved and the cost associated with driving along a corridor is decreased. This phenomenon is commonly referred to as *induced travel* and is captured in the analysis for the Project. The EIR/EA does disclose the induced travel associated with the Project.

However, the induced travel assumption discussed in the referenced studies documenting a 1.0 elasticity between lane miles added and VMT is potentially flawed. Specifically, the best approach to estimating the effects of building new lane miles, and the potential magnitude of such effects, is still widely debated. Additionally, congestion relief is only one possible benefit gained from capacity improvements, along with the accommodation of additional travelers, improved access, improved economic activity, and safety enhancements that are not reflected in the elasticity approach.

It should also be noted that the referenced studies in the comment are largely based on data published by Duranton and Turner, where the data collected are dated, comparing long-term induced travel effects from data collected in the 1980s through the early 2000s (although one study extended its data from 1981 to 2015) when significant economic factors (including the cost of gasoline) affected how much people traveled in addition to the new lane miles that were added to the system. The VMT growth during this time period may not be reflective of current travel elasticities, VMT-reducing policies, and other travel behavior that influences when, how often, and how far individuals travel.

To reinforce the fact that the commenter's referenced elasticities may not be appropriate for estimating induced travel effects in Southern California, Metro undertook a statistical assessment of induced travel using more recent travel data. This study evaluated elasticities in Los Angeles County, which is much more proximate to the study area than the dated studies referenced in the comment. This Metro evaluation found very different elasticities than those published in the referenced studies using local Southern California context and using more recent data (compared to the data used in the commenter's referenced studies) even though the statistical assessment replicated the same methodology applied by the Duranton and Turner research. The Metro assessment reinforces the fact that the commenter's referenced induced travel elasticates may not be consistent with observed elasticities using more updated data and data that are more proximate to the Project site.

Response to Comment I-138.2

For community disruptions during construction, I-15 would remain in operation throughout the duration of construction activities. There are no anticipated long-term closures or detours needed for the Project and no closures of local roads are anticipated. Under the Build Alternative (Preferred Alternative), temporary ramp closures not exceeding ten consecutive days in duration may be needed to complete the ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As

identified in Standard Project Measure **TR-1**, Transportation Management Plan, in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays when performing work activities. Potential impacts of road/lane closures are discussed further in the traffic and community sections of the Final EIR/EA.

While the Project would include the construction of additional transportation infrastructure (i.e., noise barriers, retaining walls, and bridge widening), the construction activity would be contained within Caltrans ROW as well as within the existing median of I-15.

Operation of the Project is not anticipated to disrupt community spaces or recreational facilities. There would be no operational impact on the physical deterioration of existing neighborhoods and regional parks or other recreational facilities.

The comment is correct in stating that the Draft EIR/EA concluded that the Project is expected to result in an increase in emissions of PM_{10} and $PM_{2.5}$ when compared to both the existing and No-Build conditions and that the increases in air pollutant emissions would be cumulatively considerable. However, the POAQC determination is based on the daily traffic volumes on the Project facility and its effect on local diesel particulate emissions, not the regional VMT. As discussed in the PM Conformity Hot Spot Analysis dated September 28, 2021 (updated March 25, 2025), because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, it was determined that the Project would not create a new, or worsen an existing, $PM_{2.5}$ and PM_{10} violation. Based on this information, U.S. EPA, FHWA, and Caltrans Headquarters determined that the Project was not a POAQC.

Projected construction GHG emissions were calculated for the Project using the Sacramento Metropolitan Air Quality Management District Roadway Construction Emissions Model and estimated to total approximately 5,444 metric tons of carbon dioxide equivalent over the course of the approximately 3-year construction period. Operational GHG emissions under the Build Alternative (Preferred Alternative) would increase in the Design Year (2050) compared to existing (2019) conditions. Mitigation Measures **GHG-1** through **GHG-4** and **GHG-11**, as well as Standard Project Measures **EN-1** and **AQ-4**, are expected to reduce construction GHG emission impacts from the Project. Mitigation Measures **GHG-5** through **GHG-10** would reduce the GHG emission impacts from operation and maintenance of the Project. In addition, Mitigation Measures **AQ-5** through **AQ-8** will reduce air quality impacts resulting from vehicle travel. Please refer to Chapter 3 of this EIR/EA for additional information on GHG emissions.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through

increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

For increased operational noise, based on studies completed, one noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the northbound I-15 Weirick Road On-Ramp edge of shoulder, was found to be both feasible and reasonable and is recommended for construction. Detailed modeling analysis showed that this noise barrier system meets noise reduction goals, is acoustically feasible, and is reasonable from a cost perspective. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than 50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

Response to Comment I-138.3

The analysis included for the Project did identify that, by 2030, southbound I-15 would experience significant congestion without the Project because I-15 generally transitions from six lanes just north of Ontario Avenue to three lanes at Weirick Road. This lane reduction creates the southbound bottleneck that is experienced along the corridor and the Project should help alleviate this by changing that lane reduction from six lanes to five lanes with the Project. Furthermore, the northbound direction currently experiences congestion due to oversaturation that begins around Cajalco Road and extends south. The Project will add a toll option to this corridor, which will be beneficial for users.

Although RCTC acknowledges the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next

Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

4.6.4.139 Comment Letter I-139: Lauren Ghazikhanian

Comment Letter I-139

From: Lauren Ghazikhanian
To: 15 Project South
Subject: [EXTERNAL] Objection to Toll lanes on i15
Date: Friday, November 15, 2024 12:55:36 PM

I-139.1 I am writing in response to the DEIR for the 1-15 Express Lanes Project Southern Extension in opposition to the addition of toll lanes. This project is too expensive and will not reduce congestion. As we have seen countless times a "one more lane" mindset only temporarily alleviates traffic congestion, but as congestion reduces more people drive, thus reducing benefits.

I-139.2 Instead of adding additional Toll Lanes, Caltrans should be looking to expand commuter rail. We need solutions that reduce the number of cars on our roadways, not solutions that accommodate more sprawl, more miles driven, and more GHG emissions.

This project is a 20th-century solution to 21st-century problems. I do not support the plan for these reasons.

Lauren Ghazikhanian

Response to Comment I-139.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor. Note that both HOV 3+ users with a transponder and transit operators would be able to use the toll lanes for no charge. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability, which also improves travel choice. Furthermore, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice along the corridor; provide an option for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region.

Although RCTC acknowledges the desire for expanded travel options beyond tolled express lanes, such as enhanced rail, bicycle, or pedestrian infrastructure, such alternatives fall outside the defined purpose of this Project. The purpose of this Project is specifically focused on improving vehicular traffic operations, increasing throughput (traffic flow), and reducing travel times along the corridor. These broader multimodal enhancements fall outside the scope of this Project but may be considered in future planning efforts.

Furthermore, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Response to Comment I-139.2

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service

reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Message:	Stop building roads that you charge us for. We pay taxes for roads. Just because our government wastes the money, it doesn't mean we should pay to drive on roads…road building is the base minimum our government should be providing for its citizen's…and why do the prices on toll roads change according to traffic? Another scam! Make every current road a flat fee $5.00 to ride on and if there is a bad accident, it should be free to help with the congestion!

I-140.1

Response to Comment I-140.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Message:	While I am grateful to see the freeway being widened it is infuriating that it is ONLY toll lanes. We pay the highest gas taxes in the nation, a significant portion of which is supposed to go towards road improvements. Now we have to pay again on the back end if we actually want to benefit from it. The toll prices are already exorbitant, and the average person cannot afford to pay that on a regular basis. I can only imagine what the toll prices will be when this is completed. I wish they would consider adding general purpose lanes as well.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Please note that Ortega Highway is beyond the scope of this Project. However, some segments that provide access to Ortega Highway, like Lake Street, Nichols Road, Central Avenue, Collier Avenue, and Main Street, were included in the estimate to see how express lanes on I-15 would influence travel on these segments. The results are presented in the TOAR in Tables 16 and 21 and show the change in traffic volumes on these segments between the No-Build Alternative and Build Alternative (Preferred Alternative) condition. The results are location specific, with some segments increasing in traffic volumes while others decrease. The results do not indicate that substantial amounts of traffic will divert from the freeway with the proposed tolling and will instead use Ortega Highway. Furthermore, the Western Riverside Council of Governments has completed trip distribution assessments for all agencies in the region. As shown below, of all trips generated in Lake Elsinore, only 3 percent of those trips are headed toward Orange County; this graphic provides context related to mobility in the region and demonstrates that most of the trips are staying within the region (e.g., not all trips go to/from Orange County). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

Response to Comment I-148.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles utilizing the express lanes.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

In addition, HOV 3+ is recommended as the minimum occupancy requirement for discounted travel for the I-15 express lanes, consistent with policy recommendations in the SCAG Regional Express Lanes Concept of Operations, the adjoining SR-91 in Orange/Riverside Counties, and future I-15 express lanes in San Bernardino County. This policy also aligns with the existing practices on the I-15 express lanes in Riverside County and the I-10 express lanes in San Bernardino County.

The Project would accommodate all those who commute by providing travel options to any and all users of the corridor on express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

4.6.4.149 Comment Letter I-149: Sherrie Batiste-Alvarez

Comment Letter I-149

From: S. L. B.
To: 15 Project South
Subject: [EXTERNAL] Comments RE: I-15 Express Lanes Project Southern Extension (ELPSE)
Date: Tuesday, November 19, 2024 12:30:59 PM

Hello,
Here are my comments/feedback:

I-149.1 The ask was directed to Lake Elsinore residents. As a resident, this expansion of the oll roads are typically only helping those passing through, if anything maybe add carpool lane instead.

I-149.2 Ultimately we need local street improvements that will impact us locally to get drivers off the freeways faster and remove congestions at the exits freeway (ex: Central), which means to expand local roads and interconnectivity, as more housing is being built and more peepple are moving to the area. We need more business and entertainment in our city to help people want to come, not helping people pass through our city faster.

Sherrie Batiste-Alvarez
Lake Elsinore Resident
518-378-2415

Response to Comment I-149.1

Thank you for providing comments on the Draft EIR/EA. As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

The Project would accommodate all those who commute by providing travel options to any and all users of the corridor on express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Please note that the local roadways in Lake Elsinore, along with attracting businesses and entertainment options to the city, are beyond the scope of this Project. Please contact the City of Lake Elsinore for questions about housing projects and potential business relocations: https://www.lake-elsinore.org/. This link provides information that is publicly available at this time.

The TOAR prepared for the Project did evaluate local roadways in the study area. The results of the Project's effects on these roadways are documented in Tables 16 and 21 of the TOAR. Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

It should also be noted that there are separate improvements contemplated along the corridor that will improve access to local areas along the corridor. These include improvements at I-15/Franklin, I-15/Central, I-15/Nichols, and I-15/Horsethief Canyon (to name a few). There are also future regional connections, like the Ethanac

Expressway corridor, Cajalco Road project, and the Community and Environmental Transportation Acceptability Process (CETAP) West that would all provide better connectivity and access to the region as suggested in the comment. These projects have independent utility and are included in the 2050 analysis assumptions based on their programming outlined in the RTP/SCS.

I-152.1

Response to Comment I-152.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

The Project would accommodate all those who commute by providing travel options to any and all users of the corridor on express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

4.6.4.155 Comment Letter I-155: Nyria Lugo

Comment Letter I-155

From: N. Lugo
To: 15 Project South
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension
Date: Tuesday, November 19, 2024 3:33:00 PM

To Whom it May Concern,

I-155.1 I am writing in response to the 15 South Project: I-15 Express Lanes Project South Extension. As a commuter myself and having family that are commuters who use the I-15 South daily, from the SR 91 connection down to Lake Elsinore, I am completely against this proposed project/construction. Expanding the toll road would create more problems to traffic along the proposed section of the I-15.

I-155.2 For one, many commuters that travel along this Interstate do not have extra funds to be able to pay the cost of tolls, therefore the amount of vehicles using the tolls would be very low.

I-155.3 Second, the impact the construction itself would have on traffic would only create more traffic and cause turmoil to commuters on the I-15 and SR 91.

I-155.4 Third, the proposed section of Interstate for this project is actually the area where existing traffic ends and opens up, coinciding with where the existing toll road ends, therefore there is no need for traffic relief.

I-155.5 If this project were to be approved, not only will millions of taxpayer dollars be wasted, but in the end an area that currently doesn't need a solution, will have MORE traffic and headaches for commuters and travelers of this Interstate Highway. I have already seen the negative impacts that constructing toll roads have had on communities and commuters, such as myself. Please do not approve his project.
Thank you for your time and please take in consideration those of us that commute the I-15 South daily.

Regards,
Nyria Lugo
Lake Elsinore Resident

Response to Comment I-155.1

Thank you for your participation in the environmental review process for the Project. Your opposition to the Project is acknowledged.

Response to Comment I-155.2

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Chapter 1 of the EIR/EA discusses how HOV 3+ users would be able to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

Also, Mitigation Measure **AQ-5** will be implemented, which assists in minimizing impacts on travelers. Additional Mitigation Measures **AQ-6** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested

corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride

matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Response to Comment I-155.3

Regarding your concerns with traffic delays during construction, no full roadway closures are anticipated during construction; however, temporary ramp closures not

exceeding ten consecutive days in duration may be needed to complete ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As identified in Standard Project Measure **TR-1** in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays and impacts on pedestrians and bicyclists when performing work activities. Potential impacts of road/lane closures are discussed further in the traffic and community sections of the Final EIR/EA.

Response to Comment I-155.4

Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

As discussed in Section 1.2, Purpose and Need, of the EIR/EA, due to forecasted population growth and continued development to support projected growth in the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021.

For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Response to Comment I-155.5

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor.

4.6.4.156 Comment Letter I-156: Ryan Macias

Comment Letter I-156

From: Riverside County Transportation Commission

Message:	We do NOT need anymore toll lanes! Either add more regular lanes or add 2 carpool lanes. I-156.1 It's ridiculous how much we already spend to get from the 91 to Cajalco and it doesn't even help with traffic! The toll lanes made it even worse. I-156.2
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

Response to Comment I-156.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Chapter 1 of the EIR/EA discusses how HOV 3+ users would be able to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Lastly, the TOAR included results of how the express lanes would change the corridor. As noted in the comment, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

This is my first inquiry about this subject.:	Checked
Message:	I am opposed to this project. I drive my son to orange Lutheran high school, N Santiago Blvd, Orange twice a day from 33045 Wildomar Rd. lake Elsinore. There is no need for this project to ease congestion. The congestion comes from the terrible design at cajalco. The short, over priced Express lane is worthless. If opened up, to not be an express lane it would ease congestion. And the tolls are out of control expensive and obsurd. In 2021 I would drive 6:45-7:15 from 15 freeway to 91 and the toll was around $10.00-$10.45, it is now doubled at $20.00-$20.45. Adding more toll lanes are not going to ease the traffic through the 15. Possibly adding an overhead lane from the 91 straight to Temecula will alleviate traffic. Or, adding a carpool lane and gettin rid of the toll lanes in El Cerrito/Ontario exit. Build this and see how us commuters react.

I-157.1

Response to Comment I-157.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Chapter 1 of the EIR/EA discusses how HOV 3+ users would be able to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput. The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was

dropped from further consideration. Please refer to the table below for a comparison of the commenter's proposed alternative of adding a carpool lane (assuming one lane in each direction) to the consistency with the Project's purpose. Note that the suggestion to add an overhead lane from the 91 Express Lanes to Temecula is beyond the scope and limits of this Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Dedicated carpool lane with no additional capacity	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	Shoulder running or a dedicated carpool-only lane would not manage traffic operations or travel times along the corridor. However, it would improve throughput.
	Expand travel mode choice along the corridor.	A carpool lane would expand travel choice along the corridor.
	Provide an option for travel time reliability.	A carpool lane would only improve travel time reliability for those users.
	Provide a cost-effective mobility solution.	This suggestion would be a cost-effective mobility solution.
	Expand and maintain compatibility with the express lane network in the region.	A carpool lane would not provide compatibility with the express lanes network.

As shown in the table above, the commenter's proposed alternative to add a dedicated carpool lane would not meet the purpose and need of the Project. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Message:	I would like to express my concern regarding the project. If ita all tolled lanes I dont think it will help with the traffic. Toll means more expenses for the common people. It wont help the traffic coz most would still refuse to use it and pay to use it. It would be better if carpool lanes are added not tolled lanes.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-158.1

Response to Comment I-158.1

Thank you for providing comments on the Draft EIR/EA. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

The Project would accommodate all those who commute by providing travel options to any and all users of the corridor on express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

4.6.4.159 Comment Letter I-159: Andrew Pease

Comment Letter I-159

From: Andrew Pease
To: 15 Project South
Subject: [EXTERNAL] Public Comment
Date: Tuesday, November 19, 2024 12:30:13 PM

To whom it may concern,

My name is Andrew Pease I am an 8 year resident of Lake Elsinore and 36 year resident of the Inland Empire. I am against this project if it means the additional lanes will be express lanes/toll lanes. By definition it is illegal to charge additional fees to use the roadways here in California. The tolls are always out of control for example the $20.00 toll to go from Magnolia to the 91fwy in the express lanes is literally highway robbery. I-159.1

If you as an agency want to do the right thing and make these additional lanes open to everyone without fasttrak/express lanes I am all all for easing traffic. Your agency destroyed the Cajalco interchange. Do not destroy the freeway further. Add additional lanes and not express lanes.

Thank you.

Response to Comment I-159.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. The Project is intended to improve and manage traffic operations, throughput, and travel times along the I-15 corridor and expand travel mode choice, while providing a cost-effective mobility solution.

It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput. The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

I-160.1

Response to Comment I-160.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

The Project would accommodate all those who commute by providing travel options to all users of the corridor on express lanes and general purpose lanes. Additionally, the express lanes would serve as HOV 3+ lanes for HOV 3+ users with a transponder and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the

express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.

I-164.1

Response to Comment I-164.1

Thank you for your comment. Your opposition to the Project is acknowledged. Regarding your concerns with traffic delays during construction, no full roadway closures are anticipated during construction; however, temporary ramp closures not exceeding ten consecutive days in duration may be needed to complete ramp-widening improvements. Potential construction-related traffic and circulation impacts would be minimized through implementation of a comprehensive TMP. As identified in Standard Project Measure **TR-1** in Section 2.2.8, *Traffic and Transportation/Pedestrian and Bicycle Facilities*, of the EIR/EA, a Project TMP would be prepared to minimize motorist delays and impacts on pedestrians and bicyclists when performing work activities. Potential impacts of road/lane closures are discussed further in Section 2.2.8 of the Final EIR/EA.

Message:	Dear Road Planners, please don't build another Toll lane(s). I happen to be a FastTrack transponder holder. I notice scars of motorists who don't have a transponder. They weave around authorized travelers. Really these don't do anything to alleviate traffic. U R penalizing people who are trying to be economical!! It's time the engineers come up with new and different solutions which don't claim one thing but just rob commuters. I oppose the plan as it is proposed.
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-165.1

Response to Comment I-165.1

Thank you for your comment. Your opposition to the Project is acknowledged. RCTC began developing tolled express lane facilities to improve mobility in 2006. Express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor. These improvements reduce delays, allow faster emergency response, relieve local street congestion, and offer better access to public transit and trails.

Toll evasion is effectively prevented in the express lanes because all vehicles are required to use transponders or FasTrak accounts. Vehicles without these are subject to toll violations and fines. The planned Express System will include delineator-separated lanes to ensure access is limited to defined points, further preventing unauthorized use. Additionally, the California Highway Patrol plays a crucial role in enforcing toll road regulations. It conducts comprehensive freeway patrolling and has designated enforcement areas within the Project limits to ensure compliance. The toll fees collected contribute to funding these enforcement efforts, enhancing overall safety and adherence to toll regulations.

The commenter requested that engineers come up with new and different solutions. Although RCTC acknowledges the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies

and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

Message:	Against project. Tolls already getting expensive as is. Worried about leading to back ups like often happens every morning at 15/91 interchange. Would consider supporting toll lanes project if project was more available for use by rapid express RTA bus routes or if support existed for Metrolink spur to Elsinore along old ATSF Right of Way from Porphyry out of Corona, south to Elsinore. Really feels like this part of the county is being neglected and like toll lanes were proposed as band aid that only benefits those who can afford to pay for it. Currently no other option exists to get out of Elsinore northbound. RTA route 206 is too inconvenient and infrequent, only option is to drive. Reconsider alternatives.

I-167.1

Response to Comment I-167.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. Express lanes provide drivers a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. All public transit agencies such as buses ride for free on the express lanes. This also includes HOV 3+ vehicles with a transponder and motorcycles. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Also, Mitigation Measures **AQ-5** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool

affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to

maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

I-168.1

Response to Comment I-168.1

Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput. The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration.

4.6.4.169 Comment Letter I-169: Robin Jones

Comment Letter I-169

From: Robin Jones
To: 15 Project South
Subject: [EXTERNAL] I15 southern extension.
Date: Thursday, November 21, 2024 6:48:47 AM

To Whom it May Concern,

I-169.1 I am very upset that you are considering toll roads from Corona to Lake Elsinore. Building tolls serves corporate interests, and those who are upper class and can afford to spend hundreds of dollars a month on their commute. The middle class and poor among us still get to stay stuck in traffic. We ALL deserve to have traffic eased. Build additional lanes for everyone! SPEND OUR TAX DOLLARS ON THE THINGS THEY WERE INTENDED FOR! INFRASTRUCTURE!!! Do not use our very limited space to make additional funds for the city/county/state, or whoever benefits from tolls. Our gas prices continue to rise, our taxes rise, the price of automobiles continues to rise, insurance is insane, car repairs and maintenance is more expensive than ever, child care costs almost unaffordable, rent is through the roof, and now you think that using the limited space we have to ease traffic should be used to benefit the rich, while we peons stay stuck in traffic! Shame on you!

Disgusted! Robin Jones

Response to Comment I-169.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. The Project is a result of extensive public outreach, coordination, and facilitation among several agencies, entities, and the public. In response to growing congestion, Riverside County voters approved Measure A in 1988 to fund transportation improvements. In 2002, Measure A was extended by Riverside County voters through 2039 and included improvements to the I-15 corridor. Since then, engineering, scoping, traffic, and revenue studies have been performed. A scope was developed to both meet the Measure A commitments to voters and to use the revenue from tolling to fund more congestion-relief projects and build more improvements than would have otherwise been possible using Measure A funds and other traditional State and federal freeway funding sources. Furthermore, due to the forecasted population growth and continued development of the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times. As such, the purpose of the Project is to improve and manage traffic operations and travel times along the corridor, as well as expand and maintain compatibility with the express lane network in the region.

Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor.

The congestion-based toll price will vary based on volume of usage to optimize corridor throughput (traffic flow) and will provide the funding source for the Project; any excess toll revenue would be used as a funding source for corridor improvements and repairs.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017).

The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide

employment and services for the surrounding communities. Also, Mitigation Measure **AQ-5** will be implemented, which assists in minimizing impacts on travelers. Additional Mitigation Measures **AQ-6** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC is developing, RCTC will be launching the Riverside County Free Rail Pass Program (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The approximately 2-year program would offer Metrolink passes to Riverside County residents, starting in 2025, to increase the number of passenger rail riders within Riverside County. This program would help expand access to public transportation and would target travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. The Metrolink passes will last for approximately 3 to 6 months each. These temporary free Metrolink passes would reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program would allow riders to be issued free passes through Metrolink's Mobile Ticketing Application and would reduce the financial barriers to trying public transportation. For riders without access to mobile devices, the program would provide promotional codes to obtain the passes at ticket vending machines. RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools offer a high-density transportation solution that substantially reduces vehicle travel and associated air quality impacts. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a substantial reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

Additionally, under Mitigation Measure **AQ-7**, RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These

programs collectively contribute to reduced vehicle travel and translate to lower emissions.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will invest $12 million to administer a rideshare program and will extend park-and-ride leases beyond 2029, securing an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. This initiative aims to reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options.

This is my first inquiry about this subject.:	Unchecked
Message:	We have lived in Temescal Valley for 20 years. The traffic has gone from manageable to horrendous. I fully agree with additional lanes being needed desperately but I don't agree at all with adding toll lanes. We pay more taxes in California than the rest of the country. The funds are not allocated appropriately if your answer is always to take more money from taxpayers to fix it. Besides this email contact option there needs to be a public forum in Temescal Valley to allow residents to speak their views to elected officials. My suggestion is to have this at the TMAC meetings. My husband is on the board. Many of us in Temescal Valley are greatly impacted by any changes in the 15 freeway as it is our main transportation corridor. Hopefully many can attend a meeting if they're not stuck on the 15 freeway.

I-170.1

I-170.2

Response to Comment I-170.1

Thank you for your comment. As discussed in Section 1.4, *Alternatives*, of the EIR/EA, an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

Response to Comment I-170.2

On October 9, 2024, Caltrans released the Draft EIR/EA for public review and comment, with the public review period ending on November 26, 2024. The NOA for the Draft EIR/EA was filed with the OPR State Clearinghouse on October 9, 2024, in English and Spanish, and was mailed to local, State, and federal agencies; elected officials; interested groups, organizations, and individuals; property owners; and occupants within a quarter-mile radius of the Project site. The NOA was published in English in the Press Enterprise, an English-language newspaper, and a Spanish version was published in Excélsior, an online-only Spanish-language newspaper, on October 9, 2024. The NOA was also filed and posted with the Riverside County Assessor-County Clerk-Recorder on October 8, 2024. The NOA included Project details, the viewing locations of the Draft EIR/EA, ways to submit comments, the dates of the public circulation period, and information regarding the public hearings held for the Project. RCTC conducted three public hearings on October 22, 23, and 29, 2024, that were held in Corona, Temescal Valley, and Lake Elsinore as part of the public review process.

4.6.4.171 Comment Letter I-171: Erin Archibeque

Comment Letter I-171

From: Erin Archibeque
To: 15 Project South
Subject: [EXTERNAL] Vote against I15
Date: Friday, November 22, 2024 9:29:12 AM

Good morning,

I-171.1 I am strongly against the expansion of I15 express lanes. The current I15 express lanes has not relieved traffic because prior to it being built traffic wasn't a problem like it has been since it was built. The express lanes has been the cause of traffic congestion. I think it could relieve traffic if they mirrored San Diego's express lanes by allowing all 2+HOV cars to have free access to them. The problem is the express lanes. I drive the I15 everyday and the terrible bumper to bumper traffic is only relieved when the express lanes end. I hope you realize that means the express lanes are the real problem. So please don't expand it any further, that will only cause traffic to go further.

Response to Comment I-171.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor.

As noted in Chapter 1 of this EIR/EA, the express lanes would serve HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, Alternatives, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration.

RE: Public comment for the 1-15 Express Lanes Project Southern Extension DEIR – EA 08-0J0820

Thank you for the opportunity to provide comments on the Interstate 15 Express Lanes Project Southern Extension Project ('Project'). The Project intends to widen the I-15 freeway over 16 miles by adding two tolled express lanes from SR-74 to El Cerrito Rd in the city of Corona. The goal of the project is to reduce congestion, increase travel mode-choice, increase travel time reliability, and add express lanes consistent with the network.

I am a resident of Riverside. In my professional life, I am a long-term environmental consultant in the field of air quality and I've published multiple peer-reviewed journal articles on near-road gradients in air quality (Brown et al., 2014; Craig et al., 2020; McCarthy et al., 2006, 2021). I am also an adjunct professor in the Environmental Analysis Field Group at Pitzer College teaching a class on data visualization and environmental justice.

There are multiple problems with this project, but at its core, it proposes a solution for the projective objectives that is known to be ineffective. Widening roadways doesn't improve mobility, ease congestion, expand travel mode choice, or improve traffic operations. This project will merely defer the problems for a few years while increasing VMT, GHG emissions, air pollution, and suburban and logistics sprawl. Using public tax dollars for roadway widening will delay providing modal alternatives to passenger vehicles such as dedicated bike lanes or rail transit.

Below is a list of project areas in which the draft Environmental Impact Report (DEIR) is deficient. Each are covered in more detail in individual sections that align with these key topic areas.

- Widening freeways does not fix congestion, improve travel times, or provide mode-choice
- No real alternatives to the project are considered
    - No consideration of alternative travel-modes like Class IV bike lane or Rail
    - No consideration of alternative roadway options that don't add capacity
    - No consideration of bus/vanpool options for transit
- Level-of-Service is Deprecated under SB 743
- Model Assumptions Underestimate Environmental Impacts
    - Induced VMT is not modeled
    - Induced Growth is not modeled
    - Cumulative impacts exclude multiple projects and ongoing Foundation General Plan Amendments for light industrial rezoning
- Environmental Justice indicators are wrong and ignore CalEnviroScreen4.0, 2024 California Priority Populations and SB 535 disadvantaged community designations
- Connect SoCal 2024 is not a reliable demographic projection and has already been repudiated by SCAG as a reliable projection.

Widening Freeways does not Fix Congestion, Improve Travel Times, or Provide Mode-Choice

I-172.1

The basic premise of the entire project is that adding express lanes will reduce congestion, travel times, increase mobility, and add travel-mode options.

The literature is clear that increased road capacity does not fix congestion, it merely increases traffic volume through induced demand (Volker et al., 2020; Volker and Handy, 2023). This is the flawed assumption that the amount of driving does not change when roadway supply increases. The increased trips erode any projected improvements in travel speeds based on models that do not include the increased trips and development around the widened roads.

Adding an express lane counts as a separate 'travel-mode' under transportation planning language, but it is still just passenger vehicles and is not a mode alternative that reduces VMT/GHG like rail, biking, or walking. Those are the modes that should be added to the transportation network to reduce trips via passenger car, but those are not considered in this project. Real alternatives to roadway widening need to be considered to reduce the environmental impacts to air quality and greenhouse gas emissions caused by higher VMT as required under SB 743.

Lack of Alternatives

I-172.2

CEQA requires that the project proponent provide alternatives that can meet most of the project objectives while mitigating significant environmental impacts. The fundamental mandate of CEQA is to not approve projects if feasible alternatives to the project are available.

In this DEIR, there is only a Build and No-Build alternative. The Project is the build alternative. Rejecting the project is the No-Build alternative. No alternatives are considered that mitigate the air quality and GHG emissions that would meet any of the project goals (reduced travel times, increased travel-choice modes, provide an option for travel time reliability, cost-effective mobility solution, and expand express-lanes).

The only alternative considered but eliminated from discussion was an additional HOV lane expansion, which was rejected due to cost. Here are some better alternatives that both meet project objectives and reduce environmental impacts from significant and unavoidable to less than significant. Please consider and use these as alternatives that meet project objectives while significantly reduce project impacts.

Alternative 1 – Add a frontage Class IV bike lane; repurpose an existing lane to an express lane

Currently, there is no fully connected paved bike path alongside the 15 freeway that connects Lake Elsinore to Corona. There is a striped class II bike lane on portions of Temescal Canyon road. Replacing that with a fully separate bike lane would increase safety, provide a new travel-mode option, reduce vehicle trips, and be cost-effective. It would reduce VMT, reduce air quality impacts to less than significant, and reduce GHG impacts to less than significant.

Adding a bike/scooter option to the travel corridor would meet four of the five project goals (1) reduced travel times, increased travel-choice modes, provide an option for travel time reliability, and cost-effective mobility solution. The repurposing of an existing lane for express lane mode would meet the last objective, although I think that would make it much more expensive.

Meeting four of the five project objects at lower cost would be a better use of precious tax dollars and be consistent with Connect SoCal 2024 Sustainable Communities Strategy for travel-mode choice connectivity.

Alternative 2 – Rail alternative

Currently, there is no north-south rail corridor connection along the 15 corridor. The Brightline High-speed rail project was recently approved and will bring a high-speed rail connection to Rancho Cucamonga station. The nearest north-south links require a connection through Riverside Downtown station, on a transfer to the Riverside line, and a multi-hour detour to get north to the Ontario/Rancho Cucamonga station.

Improved rail connectivity should be a priority and is consistent with the Phase 2 buildout of the California High-Speed Rail line from Los Angeles to San Diego through the Inland Empire on the 'Corona Station Option'[1].

A rail corridor connecting Lake Elsinore to Corona should therefore be a consideration.

I-172.2, cont'd

This option would reduce VMT, increase travel-mode choices, increase travel time reliability. It would be inconsistent with the express lanes and it would be more expensive.

Alternative 3 – Toll/Express Lanes but no Added Capacity

An alternative that is not considered is express lanes or toll lanes that do not add capacity. This would meet three of the objectives with less environmental harm. It would add travel-mode 'choices' by creating express lanes out of existing lanes. It would cost less than expanding the road, so it is cost efficient. And it would connect and expand the express-lane network.

It would not reduce travel-time or be more dependable.

This alternative could also include a freight toll lane or a 'truck-only lane' that required higher tolls for freight vehicles. Given the outsized impacts of freight vehicles on congestion, road damage, and air pollution, this would be the most environmentally friendly solution and might decrease freight VMT on this link.

Alternative 4 – Dedicated Vanpool and Bus Lane with no additional capacity

Yet another option would be to provide a dedicated lane for high-capacity transit. This would increase travel-mode choice, be cost-efficient, and be consistent with 'express lanes' concept. It would be less expensive but would not reduce travel time reliability. Fehr & Peers in their VMT Analysis Memorandum[2] explicitly mention these as VMT mitigation options.

[1] https://hsr.ca.gov/wp-content/uploads/docs/newsroom/maps/LA_to_San_Diego.pdf

[2] https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Vehicle-Miles-Traveled-VMT-Analysis-Memorandum_February-2021.pdf

Level-of-Service is Deprecated under SB 743

I-172.3 California has adopted SB 743 to discourage road widening and the concomitant increase in VMT that is associated with that enhanced capacity. SB 743 requires using VMT as the metric for analyzing transportation impacts instead of Level-of-Service (LOS). Unfortunately, this document 100% relies on LoS analysis and justifications for widening this freeway, a relic of last century's transportation planning practice. The DEIR starts with LOS as the primary cause of action and analysis and is mentioned over 300 times in the document, starting in the very beginning and including it in a significant fraction of Tables and Figures throughout the DEIR.

This is an invalid reason to enhance roadway capacity. Please remove it.

Model Assumptions Underestimate VMT, Air Quality, and GHG impacts

I-172.4 Models of traffic environmental impacts are only as good as their underlying assumptions and inputs. Model inputs are inadequate and do not use best practices for modeling VMT, modeling land-use growth, and do not accurately capture freight VMT growth that will accompany this project and the Cajalco Road Widening project that will create a new freight beltway through the region.

There are three main flaws that are clear. One, the scope of the study is too small by looking only at areas within 5 miles of the project. A freeway is a key trunk of the transportation network that has impacts well beyond 5 miles of the project endpoints and increasing capacity in a single link just moves the problem 'down the road' as it were. Secondly, the model doesn't even attempt to capture the induced effects of this project's additional capacity in growth. Modeling growth in land-use is excluded. Finally, the project misses existing changes in land-use happening right now through its meager and sparse project list. It is especially important in conjunction with the planned widening of Cajalco Road and the Mid-County Parkway that will create a new east-west freight corridor through the county. That is having huge unplanned for changes in land-use along the intersections of this new freight corridor.

As stated in the DEIR, the model does not consider the possibility of induced VMT caused by the project and the growth in the area. However, it has the gumption to claim that the project will not induce substantial unplanned population growth (less than significant impact), despite clearly not doing any modeling. RCTC just assumes it won't happen because there is a lot of growth already planned in the SCAG Connect SoCal 2024 report. Therefore, it assumes that all growth will be the existing planned growth.

It is not possible to claim a less than significant growth impact without doing an analysis of unplanned land-use changes. There are many unplanned land-use changes underway not accounted for in Connect SoCal 2024 in the Riverside County Foundation General Plan Amendments[3], including over 500 acres within 2 miles of the project. These are all aiming higher for substantial changes in density of development.

- GPA 240008 – 12.7 acres from Estate residential to High density residential
- GPA 240020 – 56.5 acres from agricultural estate zoning to medium-density residential

[3] https://planning.rctlma.org/2024-general-plan-foundation-amendment-cycle#2741959481-4202596112

I-172.4, cont'd

- GPA 240025 – 220 acres from Open space to Light Industrial/Business Park, Medium-density residential and high-density residential
- GPA 240003 – 239 acres from open space, mineral resources to Light Industrial/Business Park, Medium-density residential and High-density residential
- GPA 240062 – 109 acres from open space: mineral resources to light industrial
- GPA 240035 – 40 acres from rural to light industrial

This is unplanned growth happening right now. It isn't included in the model. As far as I can tell, none of these 600 acres around Temescal Valley are included in the Table 2.2.1-2 "Planned, Completed, and Proposed Projects in the Project Vicinity" list. These projects in the Connect SoCal 2024 planning document, because they weren't proposed at that point.

In addition to the missing Foundation General Plan Amendment piece, the giant elephant in the room is that this project all about providing capacity for freight. There is a land boom going on in warehouse development in Riverside County and roadway expansion is really for that. This project is abutted by multiple warehouse projects in the early and/or pre-planning stages of environmental review. **Figure 1** shows the western Riverside County warehouse areas and major existing and planned freight corridors to link them, with data from Warehouse CITY v1.21a (Phillips and McCarthy, 2024).

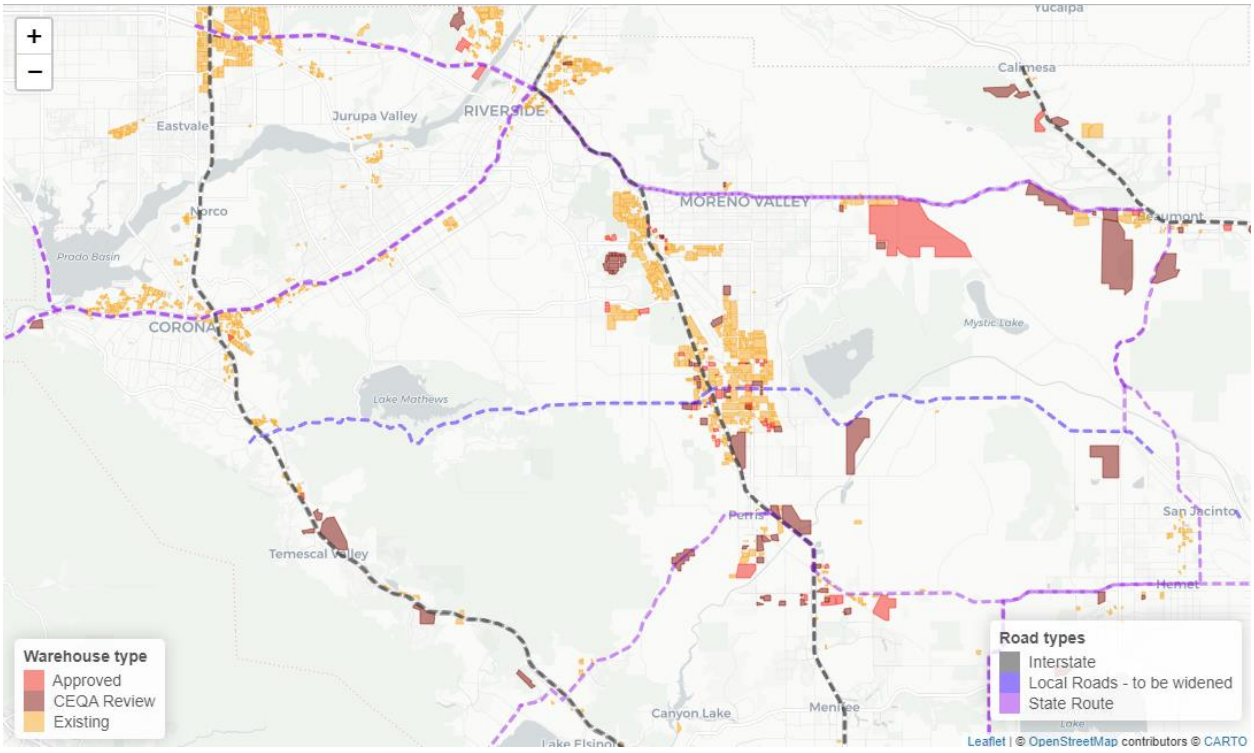

Figure 1. Map of southwestern Riverside County with major roads, selected road widening projects, and warehouse projects. Roads are from US Census TIGER/Line (2022) and warehouse projects are from Warehouse CITY v1.21a.

The current project has multiple large planned warehouse projects adjacent to it, including the Serrano Commerce Center, Temescal Valley Commerce Center, Temescal Commercial Project, Renaissance Ranch Commerce Center, Baker Street Warehouse Project, and the Alberhill Ranch project. This is more than 10 million square feet of combined warehouses, which will all primarily use the 15 Freeway for

I-172.4, cont'd

their truck routes since there are limited alternatives in this corridor. That's 6,700 new daily truck trips on this route.

Given that the project assumes that (1) all growth is planned (2) no unplanned growth will occur although there is plenty of rezoning ongoing in the unincorporated county sections and in Lake Elsinore, and (3) arbitrarily assumes that this link of the 15 freeway only influences trips within 5 miles, the project underestimates the VMT growth that will occur as a result of freeway widening.

Please include adequate modeling methods, an adequate domain that includes a buffer for all major road corridors that will connect to other major trunks (e.g., Cajalco Road all the way to the 215, and SR-74 all the way to the 215) as those are new alternatives for routes under this roadway widening scenario.

Environmental Justice Indicators are Inconsistent with State and Federal Designations

I-172.5

The Environmental Justice section is inconsistent with state designations for census tracts. California has multiple excellent indicators of environmental justice census tracts that meet regulatory and statutory requirements for designations.

- CalEnviroScreen4.0 from the Office of Environmental Health and Hazard Assessment is an excellent screening tool (OEHHA, 2021)
- SB 535 (De Leon, 2012) Disadvantaged Communities are also another potential indicator of Environmental Justice census tracts
- California Climate Investments Priority Populations (2024) combines those two indicators[4] and is available from California Air Resources Board. A screenshot of their map of the area below is shown below in **Figure 2**.

Comparing the comprehensive census tract identification for environmental justice communities in CalEnviroScreen4.0, SB 535 low-income communities, as well as identification of tribal areas in the Priority Population map, I am unable to reconcile the analysis of EJ census tracts from Figure 2.2.5-1 that is an *ad hoc* analysis of socioeconomic characteristics.

Please describe why the California designated agencies that describe and list the Environmental Justice census tracts are not included or referenced in the section on Environmental Justice in the draft EIR.

It would also have been possible to use federal tools to identify these census tracts, such as U.S EPA's EJScreen, the Centers for Disease Control Environmental Justice Index, or the Council on Environmental Quality Climate and Economic Justice Screening Tool. But none of that is referenced or used in the DEIR.

[4]https://gis.carb.arb.ca.gov/portal/apps/experiencebuilder/experience/?id=e746df40e39144029cd1f9fd748c81b2&page=Home%3A-Map

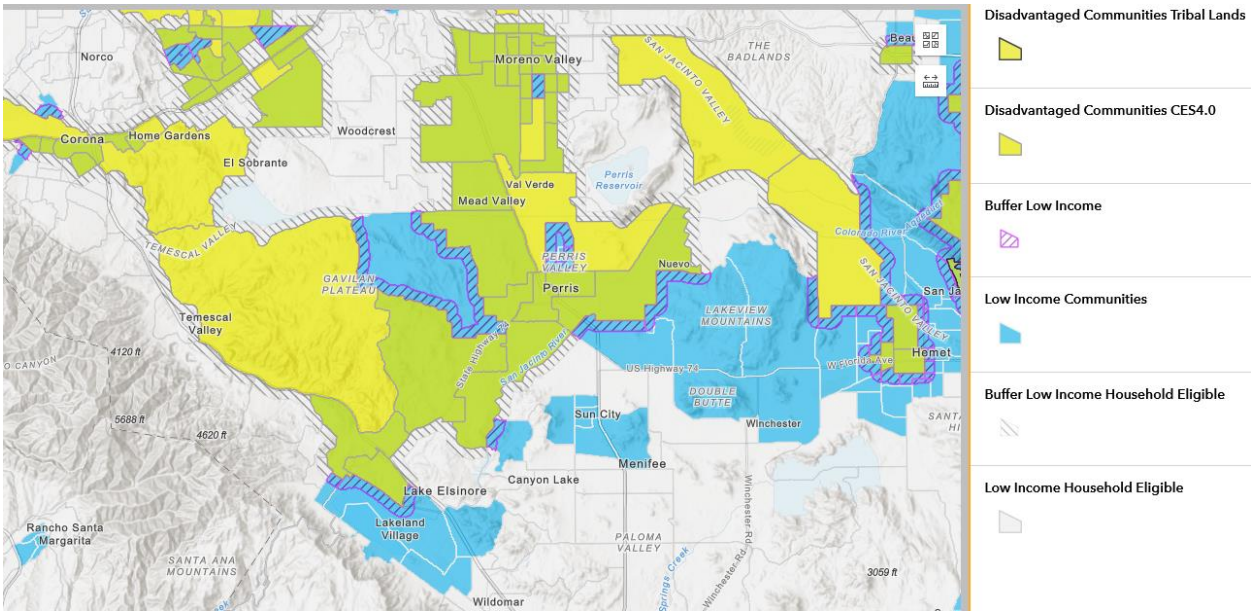

Figure 2. Screenshot of California Priority Investments Priority Populations 2024 designations of potential Environmental Justice census tracts and buffers. Map and data available from California Air Resources Board.

I-172.5, cont'd

In conclusion, I am aware of at least six environmental justice screening tools and none of them are consistent with the designations in this DEIR in Figure 2.2.5-1 or 2.2.5-2. I am a bit of an expert on Environmental Justice and teach a whole class in this topic. This DEIR does not use any recognized methodology from the last 25 years. A 1997 methodology that is not accepted at the state or federal level for current assessment of EJ tracts is not reasonable.

Given the inconsistencies in the methodology selected with authoritative and up-to-date designations at the state and federal level, I believe the entirety of the Environmental Justice section is inadequate and needs to be redone. Moreover, a 500 foot buffer around the roadway is not protective or consistent with state guidance from California Air Resources Board on near-road air quality, noise, and health impacts. A 500 foot buffer is the minimum guidance for school setbacks near roads with 100,000+ AADT, but it is not the minimum guidance for measurements of noise and air quality impacts or capturing Environmental Justice impacts.

Connect SoCal 2024 is not a reliable Demographic Projection source

I-172.6

Demographic projections used in Connect SoCal 2024 are inaccurate and were knowingly adopted despite being incorrect at the time. So many commenters on the Connect SoCal 2024 Programmatic EIR identified this issue that the response to comments has an 8.5.4 Master Response for its demographic & growth forecast[5].

The Connect SoCal 2024 demographic projections were repudiated by SCAG personnel and demographic experts in its recent demographic projections conference, less than 6 months after the adoption of the plan[6] titled, 'Navigating the New Growth Reality'. The keynote is titled "Thriving without 'growing':

[5] https://scag.ca.gov/sites/main/files/file-attachments/certifiedch8_ada.pdf?1712106153
[6] https://scag.ca.gov/2024-southern-california-annual-demographic-workshop

I-172.6, cont'd

California's Future. Every part of Southern California is projected to either decline in population or grow far more slowly than the Connect SoCal 2024 estimates.

See, for example, the California Department of Finance Table P-2A, the Caltrans Long-term Socioeconomic forecasts by County, and the many presentations at the SCAG demographic workshop.

Please use at least one other set of numbers other than the Connect SoCal 2024 projections of population growth that is reputable for assessing growth in land-use, population, and the effects of this project on the induced growth in the area. In this place – Corona, Temescal Valley, and Lake Elsinore, there are some of the highest commuting times and distances in the region. People migrate from Orange County to this corridor and keep their jobs and commute. With extremely limited transit options, this pattern will simply be exacerbated by addition to an additional set of express lanes for commuters to Orange County.

Sincerely,
Mike McCarthy, PhD

Response to Comment I-172.1

Thank you for providing comments on the Draft EIR/EA. The commenter is correct that individuals tend to drive more when travel time is improved and the cost associated with driving along a corridor is decreased. This phenomenon is commonly referred to as *induced travel* and is captured in the analysis for the Project.

However, the induced travel assumption discussed in the referenced studies documenting a 1.0 elasticity between lane miles added and VMT is potentially flawed. Specifically, the best approach to estimating the effects of building new lane miles, and the potential magnitude of such effects, is still widely debated. Additionally, congestion relief is only one possible benefit gained from capacity improvements, along with the accommodation of additional travelers, improved access, improved economic activity, and safety enhancements that are not reflected in the elasticity approach.

It should also be noted that the referenced studies in the comment are largely based on data published by Duranton and Turner, where the data collected is dated, comparing long-term induced travel effects from data collected in the 1980s through early 2000s (although one study extended its data from 1981 to 2015) when significant economic factors (including the cost of gasoline) affected how much people traveled in addition to the new lane miles that were added to the system. The VMT growth during this time period may not be reflective of current travel elasticities, VMT-reducing policies, and other travel behavior that influences when, how often, and how far individuals travel.

Finally, Metro used more recent travel data to evaluate elasticities in Los Angeles County, which is much more proximate to the study area than the dated studies referenced in the comment. This Metro evaluation found very different elasticities than those published in the referenced studies using local Southern California context and using more recent data (compared to the data used in the commenter's referenced studies).

In general, this response does not contradict the suggestion that induced travel does diminish the effectiveness of roadway expansion, but that the 1.0 elasticity referenced in the comment may not be applicable to this specific Project based on information produced by Metro in the local region. Finally, the environmental analysis, which does focus on short-term elasticity, shows that the travel demand model used for the assessment contains sensitivity to induced travel because it did identify an increase in VMT with the Project, documenting this effect on travel behavior. Additionally, Caltrans forecasting reviewed and approved the travel forecasts for this Project prior to its incorporation into the EIR/EA.

Adding express lanes improves travel choice. Note that both HOV 3+ users and transit operators would be able to use the facility for free. As discussed in the environmental document, allowing HOV 3+ users to travel at no charge will promote carpooling as a mode choice, and the Project will allow transit vehicles (currently express bus service) to use the toll lanes to improve travel time and reliability for those users, which also improves travel choice. The Project will not benefit rail, biking, or walking facilities, which is why the EIR/EA identifies an increase in vehicle travel with the Project and

identifies increases to operational air quality and GHG impacts caused by this increase in vehicle travel.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such as rail and bike paths, such alternatives fall outside the defined purpose of this Project.

Response to Comment I-172.2

This comment suggests that additional alternatives could have been considered as part of the Project, including multimodal options, as discussed below. Please note that the Project supports multi-modal options through Mitigation Measures **AQ-5** through **AQ-8**. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period.

As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation

will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region.

IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin.

The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents.

Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

- 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona)
- 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets)
- 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride)

This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing

lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.

Add a frontage Class IV bike lane.

First, it should be noted that there is a planned project in the study corridor to implement a Class I bike path parallel to the study corridor, roughly following the planned Butterfield Stage alignment. Additional information on this proposed project is available at https://rivcoparks.org/sites/g/files/aldnop306/files/migrated/-files-ugd-691623-32062b8af6f64f558cebb3eddfc0a04a.pdf.

Additionally, there are currently Class II bike facilities along Temescal Canyon Road, which generally parallel the freeway through most of the corridor. Several projects along Temescal Canyon Road are currently in construction and involve improvements to the Class II bike lanes including the Dos Lagos Widening Segment, the Dawson Canyon Widening Segment, and the Slurry Seal Segment. Additional information can be found on this website:

https://rcprojects.org/temescal-canyon-improvements-project.

Considering the planned Class I bike path parallel to the I-15 corridor and the planned Butterfield Stage project, the addition of a proposed Class IV facility along the freeway, as the commenter suggested, would be duplicative and unnecessary. Furthermore, providing a Class I and Class II bikeway outside of the State highway ROW would generally be preferrable to having bicycles next to high-speed vehicles.

Finally, this proposed bike lane alternative would conflict with a variety of components of the purpose and need defined for the Project. Refer to the table below for a comparison of the consistency of the proposed alternative to the purpose of the Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Add a frontage Class IV bike lane	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	Bike lanes do not manage traffic operations, throughput, or travel times along the corridor. As such, this alternative would not be consistent with the purpose and need of the Project. Furthermore, all of the trips expected to use the express lanes are longer than 6 miles in length; this distance exceeds the typical length of most bicycle trips along the corridor. Based on these facts, the alternative would not be consistent with the purpose and need of the Project.
	Expand travel mode choice along the corridor.	This alternative may not expand travel mode choice because the parallel bicycle facilities will ultimately be there already and the elimination of a general purpose lane that has full demand today would decrease choice for that specific mode.
	Provide an option for travel time reliability.	Bike lanes would provide travel time reliability for bicyclists, but would do nothing to improve travel time reliability for any other travel modes.
	Provide a cost-effective mobility solution.	Bicycle lanes tend to be the costliest mobility solutions when reviewing person throughput per dollar of infrastructure improvement. As shown in Table 4-3 below, the area where facilities are provided influences the cost to reduce VMT. This can be used as a proxy for identifying the efficiency of the facility. Bikeways tend to not be heavily utilized in the Inland Empire, resulting in a low throughput per dollar spent on the facility.
	Expand and maintain compatibility with the express lane network in the region.	The bike lane alternative would not be compatible with the regional express lanes network because it would create a gap in the proposed managed lanes to the south and the existing managed lanes to the north.

Table 4-3. Bike Lanes

Region	Total Miles[1]	Total Costs[1]	Total VMT Reduced[2]	Cost Per VMT Reduced[3]
West Valley	236.39	$11,793,700	134,451.84	$87.72
East Valley	191.7	$9,613,357	57,044.85	$168.52
Mountain	27.22	$3,461,000	1,316.32	$2,629.30
Desert	337.95	$26,317,585	60,192.48	$437.22

Region	Total Miles[1]	Total Costs[1]	Total VMT Reduced[2]	Cost Per VMT Reduced[3]
Unincorporated County	232.65	$23,605,630	75,952.77	$310.79

[1] Miles of bike lane improvements and associated cost estimates of Class II bike lanes from the *San Bernardino County Non-Motorized Transportation Plan* (June 2018).
[2] Assumed approximately 1 percent average reduction per 100 miles of bike lanes constructed, based on California Air Pollution Control Officers Association elasticities and VMT estimates from San Bernardino Transportation Analysis Model.
[3] Projects would pay for a "total" cost per VMT to mitigate for the Project life.

Based on the discussion in the table above, this alternative would not meet the purpose of the Project as defined by the PDT.

Rail alternative.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

Finally, this proposed alternative would conflict with a variety of components of the purpose and need defined for the Project. Refer to the table below for a comparison of the consistency of the proposed alternative to the purpose of the Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Rail alternative	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	A rail alternative does not improve or manage traffic operations or throughput.
	Expand travel mode choice along the corridor.	Rail within the I-15 ROW may be redundant with the recommendation of continuing to look at rail connectivity along the Santa Fe Branch Line.
	Provide an option for travel time reliability.	A rail line would provide an option for travel time reliability.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
	Provide a cost-effective mobility solution.	As noted by the comment, the rail alternative would be inconsistent related to a cost-effective solution because it would be more expensive while benefiting fewer users.
	Expand and maintain compatibility with the express lane network in the region.	Rail would not maintain compatibility with the express lane network.

As noted, there are components of a rail alternative that are inconsistent with the purpose of the Project as defined by the PDT.

Repurpose an existing lane to an express lane.

Note that no lanes will be converted to express lanes, but instead the Project proposes two additional lanes in each direction that will be built in the median, for a total of four lanes. The commenter is correct that adding travel lanes can lead to induced travel, where increasing roadway capacity encourages more driving, ultimately increasing the traffic volumes along the corridor over time. Additionally, improved facilities can induce demand related to land use (e.g., improved infrastructure increases land values and can increase development in an area).

This commenter proposes an additional alternative, repurposing an existing lane, presumably one in each direction, as an express lane could have been considered as part of the Project. The table below is a comparison of this alternative to the purpose of the Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Repurpose an existing lane as an express lane (no new lanes added)	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	The commenter suggests an alternative approach to reconfiguring an existing lane, presumably one in each direction, as an express lane, rather than expanding the roadway. The conversion of one general purpose lane to an express lane would likely degrade traffic operations and degrade travel time along the corridor. Additionally, the proposed alternative would increase travel demand along some of the local roadways paralleling the travel corridor, increase congestion, and increase travel time on those corridors compared to the Project condition (including increasing traffic adjacent to some schools in the study corridor).
	Expand travel mode choice along the corridor.	The proposed alternative would expand travel choice in the corridor.
	Provide an option for travel time reliability.	Although a single express lane alternative would provide an option for travel time reliability, it would decrease capacity in the general purpose lanes and would generally degrade operations and travel time reliability for those users.
	Provide a cost-effective mobility solution.	This purpose would potentially be met if existing lanes are converted to toll lanes.
	Expand and maintain compatibility with the express lane network in the region.	The conversion of a general purpose lane would not assist with express lane compatibility. The major congestion issue on I-15 in the southbound direction is the reduction from six travel lanes (four general purpose lanes and two express lanes) north of Ontario Avenue to three travel lanes south of Weirick. Shifting this bottleneck and connecting the express lanes network to the single future managed lane at SR-74 in Lake Elsinore would maintain express lane network compatibility. Conversion of a general purpose lane would degrade this further and exacerbate the existing constraint on the system.

As noted in the table above, there are components of the proposed alternative that are inconsistent with the purpose of the Project as defined by the PDT.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Toll/express lanes but no added capacity.

Refer to the table below for a comparison of this alternative to the purpose of the Project.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Toll/express lanes but no added capacity	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	As noted by the commenter, tolling without increasing capacity is not consistent with this stated Project purpose.
	Expand travel mode choice along the corridor.	Depending on the number of lanes converted to toll, the proposed alternative would expand travel choice in the corridor.
	Provide an option for travel time reliability.	The commenter notes that this would not reduce travel time or be more dependable (e.g., reliable) compared to the Build Alternative (Preferred Alternative). Tolling all lanes could reduce travel time and pricing can be used to ensure travel time reliability, but that would be inconsistent with other purposes of the Project (like expanding travel choice).
	Provide a cost-effective mobility solution.	This purpose would potentially be met if existing lanes are converted to toll lanes.
	Expand and maintain compatibility with the express lane network in the region.	This could be consistent with the regional express lanes network.

As noted, there are components of a toll conversion alternative that are inconsistent with the purpose of the Project as defined by the PDT.

Dedicated vanpool and bus lane with no additional capacity.

This alternative could be accommodated with shoulder-running vanpool or bus lanes. This alternative was compared against the purpose of the Project as shown below.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Dedicated vanpool and bus lane with no additional capacity	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	Shoulder running or dedicated vanpool/bus only lanes would not manage traffic operations or travel times along the corridor. However, it would improve throughput.
	Expand travel mode choice along the corridor.	Vanpool/bus-only lanes would expand travel choice along the corridor.
	Provide an option for travel time reliability.	Vanpool and bus-only lanes would only improve travel time reliability for those users.
	Provide a cost-effective mobility solution.	This suggestion would be a cost-effective mobility solution.
	Expand and maintain compatibility with the express lane network in the region.	Vanpool or bus-only lanes would not provide compatibility with the express lanes network.

As noted, there are components of a vanpool/bus-only lane alternative that are inconsistent with components of the purpose of the Project as defined by the PDT.

Response to Comment I-172.3

Please note that SB 743 was adopted and directed OPR to review and determine if there was an alternative metric to LOS that was more protective of the environment. VMT was identified by OPR as the preferred metric but also allows other metrics to be used for CEQA assessment if it is more protective of the environment. In fact, the goals of SB 743 are to more appropriately balance the needs of congestion management with statewide goals related to: (1) infill development, (2) promotion of public health through active transportation, and (3) reduction of GHG emissions. The statement that SB 743 was adopted to discourage road widening is an incorrect statement; the law says nothing about discouraging roadway widening.

That said, SB 743 did go into effect in July 2020. Additionally, Caltrans guidance reflects the conversion of environmental impacts using VMT for any project that begins the environmental assessment after July 2020. The NOP for the Project is dated October 11, 2019, or almost 10 months prior to converting to VMT. Given the unique timing of this Project (with the NOP almost 10 months prior to implementation of SB 743), and consistent with Caltrans' own guidance about projects initiated prior to July 2020 not being required to evaluate projects using VMT, the EIR/EA uses the appropriate approach to disclosing impacts associated with both LOS and travel and emissions in an effort to fully disclose information to the decision makers.

Response to Comment I-172.4

Please note that a sub-area-calibrated model was created for this Project. That sub-area model met all of the federal and State guidelines related to both static and dynamic validation in the study area that were in place at the time the NOP was initiated. Furthermore, this sub-area-calibrated model and its results were reviewed and approved by Caltrans in the Traffic Volumes Report in March 2020.

At that time, the modeled land use assumptions started with the land use identified in the RTP/SCS and modified it based on approved and not yet constructed or proposed land uses identified in the area. The approved and pending projects list was obtained from the respective local agencies and the land use growth was incorporated into the travel demand forecasting model. As such, the land use information within the growth forecasts include input from the Cities of Lake Elsinore and Corona along with information provided by Riverside County. This approach is considered state of the practice for model development.

Although the model includes all growth within the SCAG region as a whole, when looking at all traffic analysis zones within a 2-mile buffer of the corridor, it includes over 35,000 new residential units and more than 3,200 “industrial” jobs. Some pending developments that had applications filed after the model was created may not be reflected in the forecasting, but the forecasting will likely be revisited during future project revalidation efforts that would capture some of that additional proposed land use. Finally, it should be noted that the regional growth included in the forecasting does include regional and subregional forecasts that are based on more aggressive forecasts compared to the current RTP/SCS. Forecasts in the study area using the more recent RIVCOM model, which incorporates updated land use reflecting newer land use forecasts, were also reviewed. This model shows a significantly lower growth forecast compared to what was used in this assessment.

Although the travel demand model is sensitive to land use changes and roadway network changes (including the short-term induced travel effects previously described), it is not sensitive to long-term induced land use patterns associated with infrastructure work. Predicting land use changes (including parcel rezoning inconsistent with approved plans) associated with network improvements is largely speculative and CEQA specifically suggests that analyses should not be based on speculative assumptions. As such, induced land use changes are not included in the assessment as part of the “with Project” scenario; rather, the “with Project” scenario attempts to isolate the freeway widening by itself and document the impacts associated with the action (and not subsequent actions).

It should also be noted that numerous geographies to identify the “buffer” where VMT increases are defined were reviewed. Specifically, they reviewed a 5-mile, 10-mile, Western Riverside Council of Governments subregion, Metropolitan Statistical Area subregion, and SCAG region for potential geographies for identifying VMT increases. However, all modes have some level of allowable deviations in assignment parameters, referred to as *model convergence*. Unfortunately, these allowable deviations create what is referred to as *model noise*. Model noise is where these allowable deviations

drown out the effects of a specific project being reviewed. In the case of a model the size of RIVTAM (e.g., the size of the SCAG region), model noise starts to drown out the effects of the Project with the larger geography applied. As such, the increase in VMT being limited to the identified buffer around the Project minimized model noise without reducing the effects of the Project. Specifically, the specified buffer maximized the induced VMT estimates used in the EIR/EA and provided the most conservative (e.g., highest) induced travel estimates for the Project.

Response to Comment I-172.5

The comment notes several EJ screening tools developed by federal and State agencies. While these publicly available screening tools are helpful in providing high-level EJ data, they are not intended to be used to make specific regulatory decisions at a local level. There are limitations in their use due to variations in the metrics and data sets of interest specific to the tool's purpose.

Please note: Executive Order (EO) 12898 has been rescinded pursuant to EO 14173, and EO 14096 has been rescinded pursuant to EO 14148. However, consideration of environmental justice was included in the analyses for the Draft EIR/EA, prior to the rescission of EOs 12898 and 14096. It has been retained in the Final EIR/EA for informational purposes only.

The EJ impact analysis provided in the Community Impact Assessment was guided by EO 12898; EO 13166; the Civil Rights Act of 1964; U.S. Department of Transportation Order 5610.2C, Actions to Address Environmental Justice in Minority Populations and Low-Income Populations; and the Age Discrimination Act of 1975. The following definitions were established by the Council on Environmental Quality's Environmental Justice: Guidance Under the National Environmental Policy Act (CEQ 1997) for analyzing impacts on EJ communities.

- Minority individuals are defined as members of the following population groups: American Indian/Alaskan Native, Asian American, Native Hawaiian or Pacific Islander, Black, or Hispanic.

- Minority populations should be identified where either (a) the minority population of the affected area exceeds 50 percent or (b) the minority population percentage of the affected area is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis.

- Low-income persons are those whose median household income is at or below the Department of Health and Human Services poverty guidelines.

- Low-income populations consist of any readily identifiable group of low-income persons who live in geographic proximity, and, if circumstances warrant, geographically dispersed/transient persons (such as migrant workers or Native Americans) who will be similarly affected by a proposed FHWA program, policy, or activity.

Per Table 1-1 of the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective* (ARB 2005), sensitive land uses such as residences, schools, daycare centers, playgrounds, or medical facilities should not be sited within 500 feet of a freeway. Therefore, residential communities and housing were evaluated in the EIR/EA for all EJ communities within 500 feet of the Project limits, consistent with the California Air Resources Board's advisory on sensitive land uses.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Response to Comment I-172.6

In addition to considering future land use assumptions consistent with the SCAG 2016 RTP/SCS (which was the current RTP/SCS available at that time), the environmental analysis incorporates information from all agencies in the study area (e.g., City of Lake Elsinore, County of Riverside, City of Corona). These agencies were part of the PDT and provided input related to approved and pending developments in the study area (e.g., reasonably foreseeable projects that had applications on file with the agency at the time the analysis was being completed). Please see response to comment I-172.4 for more information on the sub-area-calibrated model that was created for the Project.

To: 15 Project South
Subject: [EXTERNAL] I-15 extension
Date: Saturday, November 23, 2024 2:26:42 PM

I-173.1 Truthfully it will only make traffic worse! The small 3 mile stretch costs as much as $14 and dumps out into a mess. Who ever decided that four lanes merging into two and then the car pool lane plus an entrance all in the same area is a fool. I wish the people who approved this would have to travel through this area every day like I do. It's a nightmare every single day! Henry McRae

Sent from my iPhone

Response to Comment I-173.1

Thank you for your participation in the environmental review process for the Project. Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput and provide travel options to all users of the corridor. All toll revenue pays toward the costs of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. The express lanes provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-175.1

Thank you for your comment. As discussed in Section 1.4.1, *Build Alternative (Preferred Alternative)*, of this EIR/EA, Caltrans guidance recommends the use of buffer separation between express lanes and general purpose lanes in order to provide a safe speed differential between both facilities. Per the guidance, the Project proposes to separate the express lanes and general purpose lanes with a buffer that consists of two solid white lane markings with an accommodation for channelizers, to deter illegal access. At access locations, the buffer that separates the general purpose lanes and express lanes transitions from two solid white lines to a single dashed white lane line. Additionally, the Project will include the installation of lane delineators between the express lanes and general purpose lanes.

Please note that there are various barriers to prevent pedestrians from accessing the freeway such as k-rail, soundwalls, and geologic obstructions such as steep slopes, among others, throughout the corridor.

In reference to your comment regarding entry into the express lanes, the Project would provide six intermediate access points throughout the Project limits. Locations of access points are designed to provide access to all local street and system interchanges. Two types of access points are proposed: combined ingress/egress without a weave lane and ingress-only. The proposed express lane access locations by type and the interchanges that each access location serves. Please note that Mission Road in Fallbrook and California Oaks Road in Murrieta are beyond the scope of the Project. Refer to the table below for express lane access point locations as mentioned in the Project's Draft Project Report.

Direction	Access Location	Access Type	General Purpose Interchanges
Southbound	El Cerrito Road	Weave Zone Access	Transition from I-15 ELP Egress to Cajalco Road Ingress from Ontario Avenue
	North of Weirick Road Off-Ramp	Weave Zone Access	Egress to Weirick Road Egress to Temescal Canyon Road Ingress from El Cerrito Road Ingress from Cajalco Road
	North of Indian Truck Trail Off-Ramp	Weave Zone Access	Egress to Indian Truck Trail Ingress from Weirick Road Ingress from Temescal Canyon Road
	North of Lake Street Off-Ramp	Weave Zone Access	Egress to Lake Street Ingress from Indian Truck Trail
	North of Nichols Road Off-Ramp	Egress Only End express lane 2	Egress to Nichols Road
	North of SR-74 (Central Avenue) Off-Ramp	Egress Only End express lane 1	Egress to SR-74 (Central Avenue) Egress to I-15 general purpose and points south

Direction	Access Location	Access Type	General Purpose Interchanges
Northbound	North of SR-74 (Central Avenue) On-Ramp	Ingress Only Start of express lane 1	Ingress from I-15 general purpose and points south Ingress from SR-74 Central Avenue
	North of Nichols Road On-Ramp	Ingress Only Start of express lane 2	Ingress from Nichols Road
	North of Lake Street On-Ramp	Weave Zone Access	Egress to Indian Truck Trail Ingress from Lake Street
	North of Indian Truck Trail On-Ramp	Weave Zone Access	Egress to Temescal Canyon Road Egress to Weirick Road Egress to Cajalco Road Egress to El Cerrito Rd Ingress from Indian Truck Trail
	North of Weirick Road Off-Ramp	Ingress Only with Merge Lane	Ingress from Weirick Road
	El Cerrito Road	Weave Zone Access	Ingress from Cajalco Road Egress to Ontario Avenue Transition to I-15 ELP

Source: Caltrans 2024

In reference to your comment about taking away a lane, as noted in Section 1.3, *Project Description*, of this EIR/EA, two tolled express lanes would be constructed in the median, for a total of four lanes. No general purpose lanes would be removed or converted as part of the Project.

Response to Comment I-175.2

As noted in Section 1.4.1, *Build Alternative (Preferred Alternative)*, of this EIR/EA, the Project would install ramp metering at the Nichols Road and Lake Street interchanges. Please note that improvements to Rancho California Road and Winchester Road are beyond the scope of the Project. Please contact the City of Temecula to share any concerns regarding these roads at (951) 694-6444 (between the hours of 8 a.m. and 5 p.m., Monday through Friday).

4.6.4.176 Comment Letter I-176: Anh Truong

Comment Letter I-176

From: Anh Truong
To: 15 Project South
Subject: [EXTERNAL] Comments for the I-15 Express Lanes Project Southern Extension Draft Environmental Document
Date: Saturday, November 23, 2024 10:49:05 PM

Hello,

Please see my comments below for the I-15 Express Lanes Project Southern Extension Draft Environmental Document.

IMPROVEMENTS FOR LOCAL INTERCHANGES

I-176.1 RCTC needs to review and update list of proposed projects in the vicinity and reevaluate any that were used in traffic analysis for traffic impacts. For example, item 37 in Table 2.2.1-2 notes the widening of Ontario Ave between California Ave and State St is currently in construction and to be completed in 2025. That information is grossly outdated as that project is not even funded for construction and will probably not be done before this project. It's bad and outdated information such as this, that make this project seem better than it actually is. Projects like these express lanes factor projects such as local roadway widening to improve overall regional mobility, but when these local roadway projects do not happen, it changes and affect the outcomes of the traffic studies significantly.

The Ontario Ave interchange has been a bigger mess since the opening of the express lanes due to more people using it to access the express lanes. In the morning, people living on Magnolia Ave will go south towards Ontario Ave just to get back on I-15 north to access the express lanes. And in the evenings, those people have to exit Ontario Ave and then get back on the I-15 north to get back to Magnolia Ave. The City of Corona is short on funding needed to widen Ontario Ave between California Ave and State St. RCTC needs to provide funding using tolls from these express lanes to widen Ontario Ave as it has made a bigger mess of the interchange because of the express lanes.

In addition, RCTC needs to evaluate any other interchanges that people will migrate to to access the express lanes and ensure that the local road of those interchanges can support the additional traffic without causing major delays for those cities.

DETERRING ILLEGAL ENTRY TO AND EXIT FROM EXPRESS LANES

I-176.2

RCTC needs to do a better job of deterring people jumping into and out of the express lanes from undesignated locations. The soft barrier between the express lanes and general lanes are not a good deterrent during peak hours when people get frustrated in traffic. There have been multiple accidents from this type of situation. Ideally, a fixed barrier should be used, similar to the express lanes in San Diego, however it may not be possible due to site constraints. However, additional methods should be explored, such as implementing "checkpoint" scanning at certain intervals along the express lanes to account for vehicles entering and exiting the express lanes. If a vehicle was not scanned at an entry point and was scanned at an exit point, that would mean that that vehicle illegally entered somewhere in between and would be fined. This could also be used to catch and fine toll evaders as well (vehicle scanned at entry point and not at exit point).

NOISE MITIGATION WITH RUBBERIZED ASPHALT

I-176.3

Noise from the express lanes is a big item that needs to be addressed PROPERLY. The freeway noise is not the loudest when there is a lot of traffic, as vehicles are driving really slow and do not generate as much freeway noise. The louder freeway noise is generated by faster moving vehicles. During non-peak hours, the freeway noise is louder than it is during peak hours because of the faster moving vehicles. Because vehicles in the express lanes will generally always be moving faster than the general lanes, even during peak hours, the pavement section for the express lanes need to use rubberized asphalt, similar to the 91 express lanes in Orange County. SR-55 also uses rubberized asphalt for a significant portion of the freeway and the noise is definitely less noticeable in the area.

As a roadway user, you can tell that there is a big difference in roadway noise in your car between concrete pavement and rubberized asphalt pavement. Yes, the rubberized asphalt may require a little more maintenance than concrete, but the trade off is substantially beneficial for the surrounding communities.

The noise study report for the express lanes only studied areas within 500' of the freeway, but the noise from the freeway travels beyond those limits. Only sound walls are proposed to mitigate the noise for the communities adjacent to the freeway, but nothing is done for the surrounding communities beyond the freeway.

In the 2003 Caltrans Asphalt Rubber Guide, Section 1.9.1.3 "Noise Abatement" states that "reduced traffic noise (primarily tire noise) is another important benefit of using asphalt rubber materials that has been documented in Europe… California (Orange and LA Counties)." It goes on to state that "significant reduction in traffic noise, ranging from 40 to 88 percent, have been measured..."

I-176.3 cont.

A minimum of 40% decrease in tire noise is a big difference to communities surrounding the freeways! As RCTC is implementing express lanes that is meant to allow people outside of the surrounding communities to bypass the surrounding communities, the surrounding communities that live within an ears reach of the express lanes will have live with and to deal with the increased noise every day after the project is completed. As such, every effort needs to be made to mitigate the noise from the project.

As stated above, the freeway is the noisiest during non-peak hours from tire noise of faster traveling vehicles. If rubberized asphalt can reduced the noise by 40% (possibly up to 88%), that needs to be used as a noise mitigation measure on the project as it would be a tremendous benefit for the communities surrounding (not just adjacent to) the express lanes.

DEDICATED EXPRESS LANE EXITS

Dedicated exit lanes need to be provided for express lane exits. A vehicle in the express lanes needing to exit has to slow down to match the speed of the general lanes and find an opening to exit. During peak hours, the adjacent general lanes are congested and move very slowly and often is "stop and go". This is a very dangerous situation as other vehicles in the express lanes are still traveling at a high speed and could hit the vehicle that is slowed down or stopped waiting for a gap in the general lanes to exit. The exit on the SB I-15 express lanes between Magnolia Ave and Ontario Ave is an existing example of this dangerous situation and it should not be designed as such for this extension of the express lanes. In the NB lanes, just south of Cajalco, there is a dedicated entrance currently designed. That should be converted to be a dedicated entrance and exit lane, similar to the WB 91 entrance/exit at the Riverside/OC county line.

I-176.4

The current entrance/exit location for both NB and SB directions between magnolia and Ontario NEEDS to be revised/fixed to provide a dedicated exit lane (similar to the configuration at the Riverside/OC county line or the SB I-

I-176.4 cont.

15 express Hidden Valley Pkwy dedicated express lane exit) and should be included as part of this project to fix this design/planning error. I have seen cars slow down and even stop on the #2 lane of the express lane waiting for a gap to exit the express lanes. RCTC has been very lucky so far that there has not been an accident due to that, but with a design such as that, it is not a matter of IF an accident will happen, but WHEN.

-Anh Truong

Response to Comment I-176.1

Thank you for your comment. RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the Project. The PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at the time of the modeling, which was prior to the Serrano Commerce Center NOP.

Please note most of the projects mentioned in the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

It should be noted that the regional growth included in the forecasting does include regional and subregional forecasts that are based on more aggressive forecasts compared to the current RTP/SCS. Forecasts in the study area using the more recent RIVCOM model, which incorporates updated land use reflecting newer land use forecasts, were also reviewed. This model shows a significantly lower growth forecast compared to what was used in this assessment, indicating a potential need to reassess future infrastructure and development plans. Table 2.2.1-2, Existing, Completed, and Proposed Projects, has been updated with the latest information.

Please refer to the following link regarding RCTC funding:

https://www.rctc.org/funding-and-planning/#planning.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Response to Comment I-176.2

As detailed in Section 1.3, *Project Description*, of the EIR/EA, six preliminary intermediate express lane access locations throughout the Project limits were evaluated. The access points are located to provide access to all local street and system interchanges and are subject to adjustment, along with toll gantry locations, during the final design phase. Two types of access points are proposed: combined ingress/egress without a weave lane and ingress-only. Two optional express lane

access locations are being considered in the southbound direction between El Cerrito Road and Weirick Road. These access points will be refined as the Project moves forward.

Response to Comment I-176.3

The use of rubberized asphalt or other “quieter pavement” types is not currently an approved abatement measure for highway traffic noise (per 23 CFR 772.15(c)), and the analysis of such pavements is not supported by the federally mandated Traffic Noise Model. Therefore, the Project pavement selection is an engineering consideration that is independent of the Noise Study Report. The Project team performed a life-cycle cost analysis, which is an evaluation that compares the economic impacts of different pavement alternatives, in which rubberized asphalt was determined not to be the preferred pavement alternative for this Project. Factors that weighed into the analysis included anticipated longevity of the pavement, initial construction, and long-term maintenance costs.

Regarding the extent of the noise study area, the focus is on land uses within 500 feet of the freeway because this is where the highest traffic noise levels occur. Impacts due to traffic noise levels are identified based on FHWA/Caltrans noise abatement criteria (NAC). For example, the NAC for residential land uses is 67 A-weighted decibels. While noise from the freeway may be audible at distances greater than 500 feet, noise impacts that approach or exceed the NAC typically only occur within 500 feet of the freeway, and often at much shorter distances. Nonetheless, the noise study report assesses numerous receivers farther than 500 feet from the freeway. Examples include locations where the closest noise-sensitive receptors are more than 500 feet from the freeway, and where second- or third-row receptors are analyzed in residential neighborhoods. These receivers are assessed both to evaluate whether there are any impacts and to verify whether these receivers would benefit from the noise barriers analyzed in the noise study report.

Based on studies completed, one noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the northbound I-15 Weirick Road On-Ramp edge of shoulder, was found to be both feasible and reasonable and is recommended for construction. Detailed modeling analysis showed that this noise barrier system meets noise reduction goals, is acoustically feasible, and is reasonable from a cost perspective. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than

50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

Response to Comment I-176.4

As discussed in Section 1.4.1, *Build Alternative*, of this EIR/EA, Caltrans guidance recommends the use of buffer separation between express lanes and general purpose lanes in order to provide a safe speed differential between both facilities. Per the guidance, the Project proposes to separate the express lanes and general purpose lanes with a buffer that consists of two solid white lane markings with an accommodation for channelizers, to deter illegal access. At access locations, the buffer that separates the general purpose lanes and express lanes transitions from two solid white lines to a single dashed white lane line. Additionally, the Project will include the installation of lane delineators between the express lanes and general purpose lanes.

Please note that there are various barriers to prevent pedestrians from accessing the freeway such as k-rail, soundwalls, and geologic obstructions such as steep slopes, among others, throughout the corridor.

Response to Comment I-177.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. Chapter 1 of the EIR/EA discusses how express lanes would serve as HOV 3+ lanes for HOV 3+ users and would be free for those users. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

4.6.4.178 Comment Letter I-178: Ruth Brissenden

From: Ruth Brissenden <ruthbrissenden@gmail.com>
Sent: Monday, November 25, 2024 7:27 AM
To: 15 Project South <15ProjectSouth@rctc.org>
Subject: [EXTERNAL] I-15 Express Lanes Project Southern Extension DEIR

To Whom It May Concern:

Please find my comments on the I-15 Express Lanes Project Southern Extension DEIR below.

My main concern with the Project has to do with impacts to Mayhew Wash in Temescal Valley.

I-178.1 The DEIR states that the Project would widen the bridge over Mayhew Wash resulting in temporary and permanent impacts to the wash. Mayhew Wash is in MSHCP criteria cell 3348 and contains unique habitat for various species of flora and fauna. This habitat must be protected to the greatest extent possible during and after construction.

PLEASE NOTE: California gnatcatchers have been seen nesting near this location. Habitat removal restrictions should be in place for March 1 through August 15 for the Mayhew Wash area.

Although Mayhew Wash is not identified by the MSHCP as a wildlife crossing or linkage, there is wildlife movement through the wash under the I-15 where it connects to Temescal Wash to the east and possibly the Cleveland National Forest to the southwest through the open space of quarry-owned property. As such, the functionality of this corridor should remain open throughout construction and the protections of NC-18 should apply to Mayhew Wash as well.

Sincerely,

Ruth Brissenden

Temescal Valley Resident

Response to Comment I-178.1

Thank you for your comment. Mayhew Wash is not described in the MSHCP for conservation and is not identified as a linkage as a part of the MSHCP. While the commenter may have concerns that there could be existing use of Mayhew Wash for connectivity, potential biological impacts at Mayhew Wash pertaining to its functionality as a wildlife corridor are addressed through consistency with the MSHCP. Please see Mitigation Measures **NC-15** and **JPR-2** for the full measure text for consistency with the MSHCP. In addition, see Avoidance and Minimization Measure **NC-18** for wildlife crossing protection measures.

Clearing of occupied coastal California gnatcatcher habitat within public-quasi public lands and the Criteria Areas (i.e., Cell 3348) between March 1 and August 15 is prohibited per the MSHCP (Special Terms and Condition 5 [b] of the Biological Opinion Permit TE-088609-0). Per the Draft EIR/EA, Avoidance and Minimization Measure **BIO-1**, Vegetation Clearing Restrictions, includes the requirement to avoid clearing of suitable habitat for this species during this period, so compliance with **BIO-1** will ensure consistency with the MSHCP for this requirement.

Additionally, the Project would utilize protective measures such as Avoidance and Minimization Measure **NC-10 (NES BIO-10)**, Revegetation, which requires temporarily disturbed areas to be hydro-seeded with a Caltrans-approved seed mix to prevent invasion by exotic species and bare ground. Additionally, implementation of Mitigation Measures **NC-16 (NES BIO-16)** and **JPR-2**, Riparian/Riverine Compensation, requires that permanent impacts on riparian/riverine resources be compensated to achieve no net loss. All temporary impacts will be replaced in kind at their current location. A mitigation ratio of up to 3:1 is proposed for permanent impacts on riparian resources and 2:1 is proposed for permanent impacts on riverine resources.

I-180.1

Response to Comment I-180.1

Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Funding for the Project is provided by a combination of local, State, and federal sources. All toll revenue pays toward the cost of construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip.

Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Chapter 1 of the EIR/EA discusses how HOV 3+ users would be able to use the facility for free. There would also be no charge for mass transit and paratransit, motorcycles, and qualifying emergency vehicles.

4.6.4.181 Comment Letter I-181: Hellen Howe

Comment Letter I-181

From:	Hellen Howe
To:	15 Project South
Subject:	[EXTERNAL] Public Feedback re: proposed I-15 Express Lanes Project Southern Ext.
Date:	Monday, November 25, 2024 8:25:20 PM

To whom it may concern:

I attended one of the community forums sponsored by RCTC in October 2024. Thank you for the opportunity to provide comments and feedback on the proposed I-15 Express Lanes Project Southern Extension.

I am a current resident of Temescal Valley and live in the Terramor community directly off the I-15. It should be noted there are senior communities on both sides of the 15 freeway. I hope you will consider my comments and that my feedback provides some perspective and understanding of why I felt it was so important to provide the following information and feedback.

I experience daily grid lock on Interstate 15 and the surrounding connecting access roads. Back up can occur 7 days a week at any time of day in either the south or north bound lanes. Unfortunately, just about everything contributes to grid lock in this area such as any freeway lane closures (for any duration), SCE projects, infrastructure projects, construction or building projects next to or near I-15, traffic accidents, and even just routine merging of traffic from toll lanes, lane changes, merging from connecting freeways or access roads.

I-181.1

As a resident of the area impacted by the proposed I-15 extension project, I have experienced and observed numerous instances in which residents are stranded in the community unable to access the freeway for either basic necessities or during emergencies. Such delays have included the inability to vacate during mandatory or voluntary fire evacuations. Poor traffic conditions even delay emergency responders such police, fire or medical vehicles and negatively impacting response times and interfere with access to my community. Some of these instances have been life threatening emergencies or posed a threat to public safety. There are often times heavy traffic congestion hampers residents from accessing timely medical services or even accessing basic necessities such as food, groceries and prescription medications. The horrific increasing traffic congestion in the area is not a mere inconvenience but rather it presents an ongoing immediate threat to public health and safety.

I-181.2

Additionally, increasing frequency of truck exhaust, noise pollution and proposals to build large warehouses along the 15 freeway in Temescal Valley and Lake Elsinore expose residents, consumers, and the public to increased health and safety risks. Projects such as the Serrano Commerce Center and warehouse projects will significantly increase truck traffic and creating a devasting strain on an already hemorrhaging 15 freeway traffic situation and further negatively impact the environment, public health and safety.

I-181.3

Based on my experience driving in and living in Southern California over 40 years, I do not believe adding the proposed toll lanes will have a significant impact on the

I-181.3 cont.

above concerns. Additionally toll road are expensive to consumers and are unaffordable for many seniors and commuters trying to make ends meet. Just making freeways bigger while continuing to drastically increase freeway usage is just a band aid to a complex traffic problem that building toll lanes can not catch up with nor address.

I-181.4

Respectfully, I am opposed to the expansion of the 15 freeway as it is currently proposed. I hope RCTC, Caltrans, county and state officials will consider some alternatives:

1. To exercise strong opposition and reject any proposals for warehouse projects along the 15 freeway in Temescal Valley and Lake Elsinore.

2. Consider developing alternative routes and modes of travel to help divert traffic from the I-15 freeway.

3. Revise the proposed expansion to reflect additional regular lanes not toll lanes.

Thank you again for this opportunity to provide public comment and thank you to all those who presented and provided information at the public forums in my community.

Sincerely,

Hellen Howe

11959 Arch Hill Drive, Corona CA 92883

Response to Comment I-181.1

Thank you for your participation in the environmental review process for the Project. Your opposition to the Project is acknowledged. Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021. As identified in Standard Project Measure **TR-1**, Transportation Management Plan, a Project TMP would be prepared to minimize motorist delays when performing work activities. The Project TMP will contain elements to enhance traveler safety. These elements will be developed during final design and incorporated in the TMP for implementation during Project construction. Potential impacts of road/lane closures are discussed further in the traffic and community sections of the Final EIR/EA. As discussed in Section 3.2, *Wildfire*, in the EIR/EA, construction of the median into express lanes would also serve to extend the firebreak between the east and west sides of I-15, which is an added benefit of the Project. Additionally, with implementation of additional lanes on I-15, the Project would have the potential to improve travel time and decrease emergency response times during operation.

The Project is included in the 2024 RTP/SCS, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll-free express lane access for emergency responders and law enforcement at all times.

Response to Comment I-181.2

RCTC established a committee of County Transportation professionals from the cities along the I-15 corridor to provide input and direction on the future of the project. The

PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region that were consistent with the RTP/SCS growth assumptions but were also refined to reflect approved and pending projects that were known when the Project traffic forecasts were developed. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time. The travel demand model utilized for the assessment estimated truck traffic associated with the known projects in the study area and estimated the growth in regional truck traffic consistent with the RTP/SCS that was available at that time. As such, growth in truck volumes are included in the assessment and are based on the best available information from when the NOP was released and when the technical assessments were initiated.

The traffic volumes, including estimated future truck traffic growth, were subsequently used to estimate worst-case traffic conditions in the Project's noise study report. For highway traffic noise, the loudest daily hour is generally characterized by high volume but free-flowing traffic traveling at the highway's design speed. When there is less traffic on the roadway, noise levels decrease due to lower overall traffic volumes; as more traffic is added to the roadway, noise levels also decrease due to the onset of congestion and lower speeds. The anticipated loudest-hour traffic volumes (i.e., the maximum traffic volumes that could be accommodated at the highway design speed) were used in the traffic noise models for existing, future No-Build, and future Build conditions.

Operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase particulate emissions (PM_{10} and $PM_{2.5}$) compared with existing conditions and decrease ROG, NO_2, and CO emissions. However, conformity analyses demonstrate that the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations, or delay timely attainment of any National Ambient Air Quality Standards or any required interim emission reductions or other milestones during the timeframe of the transportation plan (or regional emissions analysis); refer to Section 2.3.6, *Air Quality*. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. Implementation of Mitigation Measures **AQ-5** through **AQ-8** during construction and operation would mitigate air quality impacts resulting from the increase in vehicle use by providing increased transit benefits, both regionally and along the I-15 corridor.

Please note the projects mentioned by the comment should be completing individual traffic studies identifying transportation infrastructure needs that would be required to

serve those specific projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

The new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

Response to Comment I-181.3

Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Response to Comment I-181.4

Your opposition to the Project is acknowledged. Warehouses and other development projects are beyond the scope of this Project. Please contact your local cities and agencies with concerns regarding development projects in your area.

As part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. Future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects

within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

To: 15 Project South
Subject: [EXTERNAL] 15 project
Date: Monday, November 25, 2024 8:55:06 PM

I-184.1

As a Temescal Valley resident your solution of toll lanes will not benefit the residents. You also have proposed 2 massive warehouse projects in our narrow valley which will add many large semi trucks to the already jammed freeway. If these warehouse projects go through we need a designated truck lane and an HOV lane or another free lane. Since this project will be funded by bonds the county will be doubling charge the impacted residents. During rush hour in Corona the toll corridor from the 91 to Cajalco is often $20 for a 2 mile ride.
Both the toll lanes and the warehouses will not benefit the residents of Riverside County.

Leeann Woodruff

Response to Comment I-184.1

Thank you for providing comments on the Draft EIR/EA. RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the Project. The PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up-to-date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time.

Please note that the projects mentioned in the comment should be completing individual traffic studies that would identify needed improvements for those projects. Those studies would be reviewed by the local agencies and used to condition developments to implement improvements in the local area.

It should also be noted that I-15 is strategically located and is a vital interstate goods-movement corridor that links Southern California to the Inland Empire, Las Vegas, the Rocky Mountain states, and Canada. It is a primary link between major economic centers and geographic regions and is classified as a “High Emphasis” and “Gateway” route in the Interregional Road System. I-15 is a major truck route and is included in the National Network for Federal Surface Transportation Assistance Act for conventional combination trucks. Its main use is interstate and interregional movement of people and goods. I-15 is also part of the Intermodal Corridors of Economic Significance system of routes, which are significant transportation arteries that provide access to major sea or waterway ports, nationwide railway systems, airports, and interstate and intrastate highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

The new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput and provide travel options to people who use the corridor.

highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

The new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput and provide travel options to people who use the corridor.

For further information on air quality, safety, and natural communities, please see Section 2.3.6, Section 2.3.5, and Section 2.4.1 of the EIR/EA, respectively. Additionally, as identified in Standard Project Measure **TR-1**, Transportation Management Plan, a Project TMP would be prepared and will contain elements to reduce traveler delay and enhance traveler safety.

I-186.1

Response to Comment I-186.1

Thank you for your comment. Your opposition to the Project is acknowledged. Please note the I-15 express lanes are publicly owned and operated by RCTC, which is not a private or for-profit public agency, with all proposed toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when opened to traffic, as well as future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

Funding for the Project is provided by a combination of local, State, and federal sources. RCTC uses toll revenue to operate and maintain the express lanes and to repay the loan and bonds issued to fund construction of the new lanes. RCTC reinvests any remaining revenue after these obligations are paid in new transportation improvements to the corridor. The Project is intended to improve and manage traffic operations, throughput (traffic flow), and travel times along the I-15 corridor and expand travel mode choice, while providing a cost-effective mobility solution. Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. Please see Section 1.2, *Purpose and Need*, of the EIR/EA for more information.

To: 15 Project South
Subject: [EXTERNAL] 15 Freeway Express Lanes
Date: Tuesday, November 26, 2024 12:47:32 PM

Dear RCTC,

I-188.1 We NEED more lanes through Temescal Valley... I would prefer non-toll but will take anything. This project cannot come soon enough. Please find the funds asap to start the project **before** the projected 2027 groundbreaking. Move it up to 2025, PLEASE.

I-188.2 When moving forward with the design build contractors, please ask for the sound buffering pavement option, rubberized asphalt. It's a recycled product that has long life itself. A greener option repurposed rubber and asphalt. Cement while easy to lay and prepare is very loud to drive on.

I-188.3 While not part of this project, Temescal Valley desperately needs a ramp at Campbell Ranch Road and Temescal Canyon Road. RCTC/ CalTrans cooperation with the Serrano Industrial developers to align and create a ramp to alleviate truck concerns within the corridor. The Serrano project would benefit and so would the mining businesses up the road. Please make your contractors accommodate this needed ramp.

Thank you,
Tracy Davis

Yahoo Mail: Search, Organize, Conquer

Response to Comment I-188.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. There are several factors that go into a project schedule that can depend on State and federal regulations as well as preliminary studies and design aided by preparation of technical studies and environmental reports, public review periods, funding, and final design before construction can begin. Permit applications from multiple federal and State agencies that are typically submitted during the design phase and approval processes and timelines vary. Once the Project is approved, RCTC expects to use a progressive design-build method to expedite the delivery of the Project. Construction could begin in 2027; however, this is subject to change depending on funding availability.

It should be noted that RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. An alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road as part of the development and design of the Build Alternative (Preferred Alternative), as discussed in Section 1.4, *Alternatives*, of the EIR/EA. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration.

Response to Comment I-188.2

The use of rubberized asphalt or other "quieter pavement" types is not currently an approved abatement measure for highway traffic noise (per 23 CFR 772.15(c)), and the analysis of such pavements is not supported by the federally mandated Traffic Noise Model. Therefore, the Project pavement selection is an engineering consideration that is independent of the Noise Study Report. The Project team performed a life-cycle cost analysis, which is an evaluation that compares the economic impacts of different pavement alternatives, in which rubberized asphalt was determined not to be the preferred pavement alternative for this Project. Factors that weighed into the analysis included anticipated longevity of the pavement, initial construction, and long-term maintenance costs.

Based on studies completed, one noise barrier system (SW1890A + SW1890C [Design Barrier]) at the northbound I-15 edge of shoulder and at the ROW, east of the

northbound I-15 Weirick Road On-Ramp edge of shoulder, was found to be both feasible and reasonable and is recommended for construction. Detailed modeling analysis showed that this noise barrier system meets noise reduction goals, is acoustically feasible, and is reasonable from a cost perspective. A survey was also conducted of the property owners and non-owner occupants (e.g., renters) at receptors benefited by the recommended noise barrier system. A voting packet was mailed to the property owner on February 28, 2025, and to each renter of a benefited apartment on March 7, 2025. For any recipients who did not respond to the first voting packet mailing, a second packet was mailed on April 17, 2025. No responses in opposition to the proposed noise barrier system were received; however, each non-responsive benefited receptor was counted as not being in support of the proposed noise barrier system. After tallying all the responses and weighing the votes as required between the owner and renters, the total votes were approximately 90 percent in support of the proposed noise barrier system SW1890A + SW1890C (Design Barrier). Because more than 50 percent of the total votes did not oppose the noise barrier system, it is deemed reasonable based on the viewpoints of the benefited receptors.

Response to Comment I-188.3

Funding for a ramp at Campbell Ranch Road and Temescal Canyon Road (as noted in the comment) is beyond the scope of this Project. Please contact County of Riverside Transportation Department for requests for ramp expansions at https://trans.rctlma.org/contact-us. This link provides information that is publicly available at this time.

I-189.1

Response to Comment I-189.1

Thank you for your comment. The EIR/EA evaluated six preliminary intermediate express lane access locations throughout the Project limits. The access points are located to provide access to all local street and system interchanges and are subject to adjustment, along with toll gantry locations, during the final design phase. Two types of access points are proposed: combined ingress/egress without a weave lane and ingress-only. Two optional express lane access locations are being considered in the southbound direction between El Cerrito Road and Weirick Road. The Draft Project Report for the Project includes the following table showing the proposed express lane access locations by type and the interchanges that each access location serves, which include southbound and northbound Indian Truck Trail access locations.

Direction	Access Location	Access Type	General Purpose Interchanges
Southbound	El Cerrito Road	Weave Zone Access	Transition from I-15 ELP Egress to Cajalco Road Ingress from Ontario Avenue
	North of Weirick Road Off-Ramp	Weave Zone Access	Egress to Weirick Road Egress to Temescal Canyon Road Ingress from El Cerrito Road Ingress from Cajalco Road
	North of Indian Truck Trail Off-Ramp	Weave Zone Access	Egress to Indian Truck Trail Ingress from Weirick Road Ingress from Temescal Canyon Road
	North of Lake Street Off-Ramp	Weave Zone Access	Egress to Lake Street Ingress from Indian Truck Trail
	North of Nichols Road Off-Ramp	Egress Only End express lane 2	Egress to Nichols Road
	North of SR-74 (Central Avenue) Off-Ramp	Egress Only End express lane 1	Egress to SR-74 (Central Avenue) Egress to I-15 general purpose and points south
Northbound	North of SR-74 (Central Avenue) On-Ramp	Ingress Only Start of express lane 1	Ingress from I-15 general purpose and points south Ingress from SR-74 Central Avenue
	North of Nichols Road On-Ramp	Ingress Only Start of express lane 2	Ingress from Nichols Road
	North of Lake Street On-Ramp	Weave Zone Access	Egress to Indian Truck Trail Ingress from Lake Street
	North of Indian Truck Trail On-Ramp	Weave Zone Access	Egress to Temescal Canyon Road Egress to Weirick Road Egress to Cajalco Road Egress to El Cerrito Rd Ingress from Indian Truck Trail

Direction	Access Location	Access Type	General Purpose Interchanges
	North of Weirick Road Off-Ramp	Ingress Only with Merge Lane	Ingress from Weirick Road
	El Cerrito Road	Weave Zone Access	Ingress from Cajalco Road Egress to Ontario Avenue Transition to I-15 ELP

4.6.4.190 Comment Letter I-190: Jessica Lopez

Comment Letter I-190

From: Jessica lopez
To: 15 Project South
Subject: [EXTERNAL] The 15 freeway Project
Date: Tuesday, November 26, 2024 8:42:55 PM

I-190.1 The way the 15 freeway is completely backed up at Cajalco has to be an environmental disaster with the accumulation of air pollutants.

I-190.2 First I cannot understand why we do not have light rail from Temecula to Corona Station to the Metro link stations all of the way into Ranch Cucamonga. I have been to Sydney Australia, the economy that just exists along the light rail is amazing.

I-190.3 So now we are proposing toll lanes. Which are unfair to tax payers especially after Prop 6. We need more lanes.

I-190.4 And the exit At Cajalco needs to be reworked. It is too stupidly wide. To narrow the freeway into a choke point at that spot is a great way for the toll lanes to make money. Jesica Lopez Sent from my iPhone

Response to Comment I-190.1

Thank you for your comment. As included in Section S.4.1, *Purpose*, of the EIR/EA, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice; provide options for travel time reliability; provide a cost-effective mobility solution; and expand and maintain compatibility with the express lane network in the region.

Operation of the Build Alternative (Preferred Alternative) under Opening Year (2030) and Design Year (2050) conditions is expected to increase particulate emissions (PM_{10} and $PM_{2.5}$) compared with existing conditions and decrease ROG, NO_2, and CO emissions. However, conformity analyses demonstrate that the Project is not anticipated to cause or contribute to any new localized CO, NO_2, $PM_{2.5}$, and PM_{10} violations, or delay timely attainment of any National Ambient Air Quality Standards or any required interim emission reductions or other milestones during the timeframe of the transportation plan (or regional emissions analysis); refer to Section 2.3.6, *Air Quality*. Therefore, the Project would not expose sensitive receptors to substantial pollutant concentrations. Implementation of Mitigation Measures **AQ-5** through **AQ-8** during construction and operation would mitigate air quality impacts resulting from the increase in vehicle travel by providing increased transit benefits, both regionally and along the I-15 corridor.

Response to Comment I-190.2

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the

Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

Response to Comment I-190.3

Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The congestion-based toll price will vary based on volume of usage to optimize corridor throughput and will provide the funding source for the Project; any excess toll revenue would be used as a funding source for corridor improvements and repairs. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput and is not profit based. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Response to Comment I-190.4

Existing (2019) conditions for the I-15 segment, discussed in Section 1.2.2.1 of this Final EIR/EA, identified the southbound and northbound Cajalco Road off-ramps currently operating at LOS F as the demand exceeds capacity during PM peak hours. The Project is intended to improve and manage traffic operations, throughput (traffic flow), and travel times along the I-15 corridor and expand travel mode choice, while providing a cost-effective mobility solution. Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. Please see Section 1.2, *Purpose and Need*, of the EIR/EA for more information.

Message:	Why are we spending more money on widening freeways? We know this doesn't solve traffic. We know this only induces demand. At best, it'll improve traffic for a year or two before it gets just as bad again. We know it's terrible for the environment. We know it's horrible for wildlife. We also know public transit is the only thing that will alleviate traffic. We know all of these things; they are facts. And yet, we're spending millions on this instead of putting that money into light and regional rail projects that desperately need funding. What is wrong with you people?
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-191.1

Response to Comment I-191.1

Thank you for providing comments on the Draft EIR/EA. RCTC is providing increased transit benefits, both regionally and along the I-15 corridor. In addition to a discounted Metrolink Pass program, RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project.

Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC's ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects

within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

4.6.4.192 Comment Letter I-192: Dori Mendoza

Comment Letter I-192

From: Dori Mendoza
To: 15 Project South
Cc: Dori Mendoza
Subject: [EXTERNAL] Comments regarding the 15 Tollroad Expansion
Date: Tuesday, November 26, 2024 12:45:30 PM

I-192.1 I'm opposed to the expansion. I've lived in Temescal Valley for 8 years and over the years, the growth has been tremendous. But what has come with this growth has been an incredible increase in traffic on both sides of the 15 freeway. More often than not, the traffic can be at an absolute standstill.

I-192.2 The current section of the toll road hasn't done anything to alleviate the traffic problem. It's expensive and where it ends at Calajco, it backs up so that non-tollroad vehicles catch up to the toll road traffic. And we're paying for what???

I-192.3 Whatever "improvements" are going to be made to Temescal Valley, the first consideration should always be how will this be a benefit to the community. This expansion does nothing to benefit the community.

I-192.4 Instead, I'd hope RCTC would consider the following:

Eliminate the existing stretch of the tollroad and extend those lanes to Lake Elsinore but as HOV lanes. It would encourage carpooling and take cars off the freeway.

I-192.5 Add a truck lane. The current truck traffic is awful. If the 6.6 million square foot Serrano Commerce Center and the 4.5 million square foot proposed warehouse at Alberhill are built, the truck traffic will explode. These trucks won't be on the toll road. They'll be jockeying for the non- toll lanes.

I-192.6 To add to the proposed warehouses being proposed, if approved, construction would run concurrent with the freeway expansion. Communities like Terramor would be isolated and unable to navigate traveling north or south. The only "alternative route" (as someone naively said at one of the public hearings) would be Temescal Canyon Road. Whenever there's an accident on the 15, or if SCE shuts down one side or even both sides of the 15 (as happened multiple times this past week), all that traffic bleeds onto Temescal Canyon Road and that "alternative route" becomes a parking lot of cars.

I hope RCTC and CalTrans seriously consideration the ramifications of the proposed 15 Freeway Toll Road extension. It does nothing to benefit TV communities and would only create more traffic at a considerable expense to the residents.

Dori Mendoza

Response to Comment I-192.1

Thank you for your comment. Your opposition to the Project is acknowledged.

Response to Comment I-192.2

Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the opening year of the Project). Please refer to the link provided for a copy of the TOAR:

https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

Response to Comment I-192.3

Express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operations of these toll projects and other transportation improvements along the corridor.

As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Response to Comment I-192.4

As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

Response to Comment I-192.5

As to the commenter's suggestion to have a dedicated truck lane instead of the Project, please see the dedicated truck lane in comparison to the Project's purpose and need. The following table demonstrates that the dedicated truck lane alternative would not meet the Project's purpose and need.

Commenter's Proposed Alternative	Project Purpose	Response / Consistency with Project Purpose
Dedicated truck lane	Improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor.	A dedicated truck lane would improve operations for trucks but would likely not address traffic operations and would not improve throughput for passenger vehicles.
	Expand travel mode choice along the corridor.	This alternative would not expand travel mode choice.
	Provide an option for travel time reliability.	A truck lane would only improve travel time reliability for trucks.
	Provide a cost-effective mobility solution.	A truck lane, if utilized, could provide a cost-effective mobility solution.
	Expand and maintain compatibility with the express lane network in the region.	The regional express lane network is utilized by passenger vehicles and a dedicated truck lane would not be compatible with those same users.

The current express lanes that are open to the public referenced in the comment are from the ELP. The Project would connect to the ELP and extend the express lane network an additional 15 miles. The ELP does improve congestion. Specifically, it removes a major bottleneck in Corona that is the primary cause of southbound congestion. Also, travel times improve significantly in the opening year condition.

As to the concern about an increase in truck usage, the land use forecast includes an additional 3,000+ industrial/warehousing jobs within a 2-mile buffer of the corridor. Additionally, the SCAG/Riverside County forecasts included additional industrial/warehousing jobs growth in the region. This is all reflected in the forecasts developed for the Project. Additionally, the new proposed express lanes cannot accommodate heavy-duty vehicles, and it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips. The travel demand model utilized for the assessment estimated truck traffic associated with the known projects in the study area and estimated the growth in regional truck traffic consistent with the RTP/SCS that was available at that time.

The presence of truck trips on the study corridor was estimated using the Riverside County travel demand forecasting model (RIVTAM) after land use was updated to reflect known projects in the study corridor when the NOP was released and when the technical studies were initiated. Through heavy vehicle trips were estimated and are consistent with the RTP/SCS. As such, the model accurately forecasts and assigns heavy vehicle trips to the I-15 corridor based on the assumed land use and the regional estimates of regional truck traffic. As previously noted, the express lanes will not increase capacity or increase the demand for heavy vehicles in the study corridor, because heavy vehicles will be restricted from using the express lanes. Therefore, although there is expected growth in heavy vehicles along the corridor when comparing the Opening Year or Design Year forecasts to the existing condition, there is no change in heavy vehicle volumes between the No Build and Build conditions.

Response to Comment I-192.6

RCTC established a committee of County Transportation Commissioners from the cities along the I-15 corridor to provide input and direction on the future of the project. The PDT and representatives from the Cities of Corona and Lake Elsinore and the County of Riverside worked with local agencies to develop land use assumptions for the region. The Project traffic was modeled using the most up to date information that was available at the time the study initiated (and when the NOP was released). During this time, future projects were captured and analyzed in Section 2.5 of this Final EIR/EA; however, recent projects, such as the Serrano Commerce Center, which released its NOP in May 2024 (the NOP for the Serrano Commerce Center is available at the following link; this link provides information that is publicly available at this time: https://ceqanet.opr.ca.gov/2006081015/5), were not captured because they were not far enough along in the environmental process during time of the Draft EIR/EA. The forecasts and operations assessment were completed using state-of-the-practice software, methodologies, tools, and assumed growth available at that time.

In terms of traffic, although the traffic model includes all growth within the SCAG region as a whole, when looking at all traffic analysis zones within a 2-mile buffer of the corridor, it includes over 35,000 new residential units and more than 3,200 “industrial” jobs. Some pending developments that had applications filed after the model was created may not be reflected in the forecasting, but the forecasting will likely be revisited during future project revalidation efforts that would capture some of that additional proposed land use.

Finally, it should be noted that the regional growth included in the forecasting does include regional and subregional forecasts that are based on more aggressive forecasts compared to the current RTP/SCS. Forecasts in the study area using the more recent RIVCOM model, which incorporates updated land use reflecting newer land use forecasts, were also reviewed. This model shows a significantly lower growth forecast compared to what was used in this assessment, indicating a potential need to reassess future infrastructure and development plans.

It should also be noted that I-15 is strategically located and is a vital interstate goods-movement corridor that links Southern California to the Inland Empire, Las Vegas, the Rocky Mountain states, and Canada. It is a primary link between major economic centers and geographic regions and is classified as a “High Emphasis” and “Gateway” route in the Interregional Road System. I-15 is a major truck route and is included in the National Network for Federal Surface Transportation Assistance Act for conventional combination trucks. Its main use is interstate and interregional movement of people and goods. I-15 is also part of the Intermodal Corridors of Economic Significance system of routes, which are significant transportation arteries that provide access to major sea or waterway ports, nationwide railway systems, airports, and interstate and intrastate highway systems. These routes serve as intermodal corridors of economic significance. Weekend and holiday recreational traffic on the route is exceptionally high because it serves as a connection to Las Vegas and to the Colorado River area via I-40.

Therefore, the design of express lanes along the I-15 corridor would increase vehicular throughput (traffic flow) and provide travel options to people who use the corridor.

This is my first inquiry about this subject.:	Checked
Message:	I hope that the cost for using the new toll lanes isn't as cost-prohibitively high as the lanes that were added to the I-15 in Corona. As anyone can see, the ridiculous daily bottleneck in the regular lanes continues to exist because the adjacent toll lane fares are so cost-prohibitively high. The volume of these toll lanes is never even close to full capacity, while the adjacent regular lanes remain at a consistently daily standstill. Has there ever been a feasibility study that includes creating at least one toll-free lane in each direction?
Subscribe to RCTC's E-Newsletter, The Point:	Unchecked

I-193.1

Response to Comment I-193.1

Thank you for your participation in the environmental review process for the Project. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows RCTC to base tolls on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.

Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

https://www.riversideexpress.com/about#policies.

RCTC undertook a feasibility study to assess the viability of various Project options, all of which focused on increasing vehicular throughput (traffic flow). The two-lane express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. As discussed in Section 1.4, *Alternatives*, of the EIR/EA, as part of the development and design of the Build Alternative (Preferred Alternative), an alternative was considered to add a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, future traffic volumes within the I-15 corridor were projected to increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project based on the projected traffic demands. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. Because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy, the single-lane HOV 3+ alternative was dropped from further consideration. For this Project, there are two alternatives under consideration:

- The Build Alternative (Preferred Alternative)
- No-Build Alternative

The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.

I-194.1

Response to Comment I-194.1

Thank you for providing comments on the Draft EIR/EA. Your opposition to the Project is acknowledged. Although RCTC acknowledges and understands the desire for expanded travel options beyond tolled express lanes, such alternatives fall outside the defined purpose of this Project. However, RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County. RCTC embarked on an ambitious goal to provide additional rail services throughout the county. After implementation of the Perris Valley Line rail project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. The Next Generation Rail Study identified existing abandoned railroad ROW along the I-15 corridor (separate and distinct from the freeway ROW), in addition to a variety of other corridors in Riverside County with the potential to support future rail lines that could be used for future rail projects in the region.

RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options.

Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.

Lastly, Section 2.2.1 of the EIR/EA discusses how the Project would expand and maintain compatibility with other express lanes networks within the region. Therefore, the Project would support the development of transit connections between significant transit corridors within Riverside County and to regional activity centers, resulting in a

regional system that would maximize the efficiency of I-15 and address the anticipated growth that would increase the demand on the current deficient highway system. As a cooperative Project between RCTC and Caltrans, the Build Alternative (Preferred Alternative) would enhance regional mobility and offer greater user flexibility of the regional transportation system.

If you would like additional information on RCTC projects or have questions, please refer to the link below:

I-195.1

Response to Comment I-195.1

Thank you for your participation in the environmental review process for the Project and your overall support for the Project. The northbound direction on I-15 currently experiences congestion due to oversaturation that begins around Cajalco Road and extends south. The Project would add two tolled express lanes both the northbound and southbound directions for a total of four lanes within the median of I-15 from SR-74 to El Cerrito Road in the City of Corona, for a distance of approximately 15.8 miles. The Project would also add a SB auxiliary lane between both the Main Street Off-Ramp and SR-74 (Central Avenue) On-Ramp, and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (approximately 1 mile).

4.6.4.196 Comment Letter I-196: Shari Wasson

Comment Letter I-196

From: Shari Wasson
To: 15 Project South
Subject: [EXTERNAL] Interstate 15 Express Lanes Project Southern Extension
Date: Tuesday, November 26, 2024 10:26:22 PM

Dear Mr. Dietzler:

I am concerned about the impacts that the Interstate 15 (I-15) Express Lanes Southern Extension would have on our natural environment, especially in regards to the impact the project would have on wildlife connectivity in Riverside County. In particular, I disagree with the determination made by the Riverside County Transportation Commission (RCTC) and California Department of Transportation (Caltrans) in Section 3.1.4(d) of the Draft Environmental Impact Report (EIR/EA) for this project, that the project would have a "less-than-significant impact," without any mitigation, on interfering substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impeding the use of native wildlife nursery sites.

I-196.1 The Draft EIR/EA does discuss the potential detrimental impacts that the project would have on wildlife connectivity. However, it then just dismisses these potential impacts as not being significant, without citing any studies of similar situations where an increase in the number of travel lanes along a highway did not result in substantial negative impacts on wildlife connectivity. Section 2.4.1 of the Draft EIR/EA extensively discusses the various wildlife corridors, such as Bedford Wash and Temescal Wash, that would be negatively impacted by this project due to the widening of bridge spans, which would reduce the sunlight, openness, and natural habitat within these corridors and thereby make them less attractive to wildlife. The DEIR also discusses how the four additional traffic lanes would add to the already-poor capacity for wildlife movement across I-15, since roadkill is currently "frequently observed" along I-15. From this description in the Draft EIR/EA, the I-15 continues to substantially impede wildlife movement in the project area, so any changes to the I-15 (such as this project) that increases this impact should be considered substantial as well. In addition, the Draft EIR/EA does not discuss how negative impacts to current wildlife corridors could pressure wildlife to cross the actual freeway lanes at a higher frequency than before as a result of the project, thus increasing the amount of wildlife traffic that could cross and be killed along I-15.

Therefore, I ask that you implement the following measures to help mitigate the project's impacts on wildlife connectivity:

I-196.2

1. **Increase the size of all culverts that will be improved** as a part of this project that are located in areas having high potential for wildlife connectivity.

2. **Provide natural lighting sources**, via solar tubes for example, within the medians of the

planned bridge spans over wildlife corridors to allow for natural daylight to penetrate into these corridors. This natural lighting would simulate the 'openness' of the corridors and stimulate native plant growth, thus encouraging wildlife to use the corridors.

3. **Fully fund, support, and expedite the construction of the Rainbow Canyon Wildlife Crossing**, planned further south from this project site. This crossing would benefit a variety of species throughout the region, such as mountain lions, bobcats, and mule deer. Unfortunately, according to the following website, this wildlife crossing project is currently "paused": https://www.permits.performance.gov/permitting-project/dot-projects/rainbow-canyon-wildlife-crossing. However, activating and expediting the creation of this crossing would provide a linkage across I-15 and allow RCTC and CalTrans to rise above the status quo of ignoring the current substantial barrier that I-15 creates for wildlife in this region, in particular for mountain lions living between the Santa Ana Mountains and Eastern Peninsular Range (Riley 2018).

I-196.2 cont.

If RCTC and Caltrans cannot implement all of the above measures to improve wildlife connectivity along I-15, then I ask you cancel this express lane extension project. Thank you for your time and consideration.

Sincerely,

Shari Wasson
Certified California Naturalist and Upland, California Resident

Response to Comment I-196.1

Thank you for your comment. The addition of four express lanes would close the bridge span at several bridges. The effects of closing the bridge spans would include loss of vegetation within the median, reductions in traffic noise within the wildlife crossing areas, reductions in traffic night lighting within the wildlife crossing areas, increases in openness within the crossing (due to decreases in vegetation), decreases in cover available within the crossing areas, and decreases in vegetative forage within the crossing areas.

Noise pollution is identified as changes in behavior associated within migration, communication, detection of prey, and predator avoidance in wildlife (Collins et al. 2022). How wildlife respond to noise pollution varies, with some species showing habituation over time, some showing fear responses, and some ungulate and small mammal species using anthropogenic noise as a “shield” to use as shelter from predators. Acute, infrequent noise can startle animals and may cause an escape response; chronic, continuous noise, over longer periods of time, can alter anti-predator behavior such as vigilance. Increased noise can inhibit predators more than prey, resulting in a lesser need for vigilance by prey. Mammalian studies suggest that there are fear and avoidance responses due to increases in noise pollution, but reductions in predation efficiency.

If traffic nighttime lighting and noise penetrate road medians, it lowers the quality of the median for wildlife (Martinig and McLaren 2019). Wildlife passages that include safe access to a vegetated median provided opportunistic foraging by some small and medium-sized mammal species, but it varies based on several factors. If there was an increase in mammal predators due to the presence of a vegetated median, there was a decrease in use by mammal prey, so not all species are affected equally by the presence of a vegetated median (Martinig and McLaren 2019). In addition, whether wildlife spend time within a vegetated median is dependent on the resources within the median. If there are foraging opportunities for species within the median, the median becomes a resource. If traffic light and noise penetrate the median, it lowers the quality of the median for noise- and nighttime light–adverse species (Martinig and McLaren 2019). Decreases in light pollution negatively affect predators, which use light for hunting, but positively affect prey, who use the cover of darkness to avoid predation. There is an increase in use of open wildlife crossings by prey due to the absence of cover for predators. Predators are more likely to avoid open wildlife crossings due to the absence of cover.

The effectiveness of a wildlife corridor is influenced by species’ ecological and behavioral requirements. Based on the evidence, there will be a beneficial effect on prey and a negative effect on predators due to the closing of the median. However, ecological processes are not simple. A crossing benefiting prey species could benefit predator species through a reduction in stochastic fluctuations in the prey populations, resulting in a more stable food source. A major threat for species populations at risk is instability. If the closing of the median benefits prey species and reduces population variability in prey species (increasing stability), the overall net benefit for predators may

outweigh any negative effects from changes in the crossing. Predator movements need to occur but are not required to be as frequent as prey movements.

There is strong evidence that one effect that is globally negative with the greatest impact for wildlife is human presence. Wildlife will avoid humans because humans are perceived as a threat; if approaching a wildlife corridor, which is a restricted space, wildlife will either retreat or wait, both of which are costly energetically (Nguyen 2019). There is no evidence that operation of the Project will change human presence at the wildlife crossings.

The changes to the wildlife crossings of closing the median will be beneficial for some species (expected to be prey) and detrimental for other species (expected to be predators), but predators will benefit from the benefits to prey.

For some of the bridge spans, gap closure would be considered a beneficial effect, because it relates to traffic noise reduction at ground level. Where a gap closure has wildlife crossing functions and values, that beneficial effect would be increased.

In addition, a Wildlife Crossing Plan will be created (see Avoidance and Minimization Measure **NC-18**, Wildlife Undercrossings). At the MSHCP wildlife crossings, vegetation will be installed to guide wildlife into the wildlife crossing. The vegetation will provide cover for small mammals and predatory species such as mountain lion or bobcat, and it will mimic the surrounding vegetation. However, maintaining openness at the crossings is also important for species that require openness (i.e., larger prey species) or this will preclude these species from using the crossing. The biggest challenge will be maintaining a crossing that will deter use by humans, because human presence is the single biggest factor determining use of a crossing. RCTC understands the commenter's concern regarding median closure; however, median closure is not the impact determining the incidence of roadkill. Human use of a wildlife crossing is the main deterrent in the use of wildlife crossings to such an extent that it is almost the sole predictor of a wildlife crossing's effectiveness. For this reason, an effective Wildlife Crossing Plan will focus heavily on managing human trespass. A qualified biologist preparing a Wildlife Crossing Plan will focus heavily on managing human trespass to develop an effective crossing plan.

Response to Comment I-196.2

The loss of aquatic vegetation within the median will be appropriately mitigated, and the required mitigation lands must be biologically equivalent or superior (see Mitigation Measure **NC-17** for the full text of aquatic resource compensatory mitigation). Meeting the requirement for the mitigation of loss of aquatic habitat within the median will be sufficient mitigation and no additional mitigation is proposed for aquatic resources.

Additionally, RCTC is complying with the Western Riverside County MSHCP, a habitat conservation plan that will preserve 347,000 acres of land within Western Riverside County, including 153,000 acres of additional reserve lands acquired for conservation as part of the MSHCP.

Within this Project, nine wildlife undercrossings have been identified as part of the MSHCP Conservation Area, with specific requirements that RCTC has met. RCA and the wildlife agencies (USFWS and CDFW) have reviewed the plans to ensure these wildlife undercrossings meet MSHCP requirements and are consistent with the plan. RCTC is responsible for designing and adhering to the requirements for wildlife crossings within the Project limits. This does not include other areas outside the scope of this Project, such as the Rainbow Canyon Bridge. Please refer to Avoidance and Minimization Measure **NC-18** in Section 2.4.1 for wildlife crossing protection measures, including lighting measures. Avoidance and Minimization Measure **AS-1** in Section 2.4.4 also provides measures for nighttime lighting management. If you would like additional information on RCTC projects or have questions, please refer to the link below:

https://www.rctc.org/contact-us/.

4.6.5 Social Media Comments

Date and Time	Source	Name	Comment	Response
10/9/2024 5:12:32 PM	Facebook Comment	Melissa Leon	I do not approve of the project. Eliminating lanes in the corridor would cause MORE congestion. Commuting south through Magnolia St to Weirwick Rd. Is an absolute nightmare and at least 30mins everyday during rush hour and on weekends. We have a proposed 6 million square foot industrial complex coming in with and additional 1,500 trucks during rush hour and school drop offf and pick up. I can't imagine our main thruway being reduced, especially during an emergency or evacuation.	Thank you for your comment. Your opposition to the Project is acknowledged. As noted in the Project description in Section 1.3 of the Draft EIR/EA, two tolled express lanes would be constructed. No general purpose lanes would be removed from the corridor. As discussed in the PM Conformity Hot Spot Analysis dated September 28, 2021 (updated March 25, 2025), because the new lanes cannot accommodate heavy-duty vehicles, it is not anticipated that extension of the existing express lanes in the median of I-15 would result in a significant increase of truck trips (see Section 2.3.6, *Air Quality*, for more information). The Project is included in the Connect SoCal 2024 RTP/SCS, which can be used in the development of regional and community evacuation planning. The Project would add additional travel lanes that can be used during an emergency evacuation event. Current RCTC toll policy provides toll-free express lane access for emergency responders and law enforcement.

Date and Time	Source	Name	Comment	Response
			Completely opposed to excessive toll cost of over $15 and reduced lanes for people who can't afford to pay that, taking away valuable family time.	
10/9/2024 7:36:09 PM	Facebook Comment	Brett Joseph Till	Placing Express lanes makes traffic worse! No one wants this. This is exactly where traffic improves right where the "express lanes ends. How about you fix the potholes on the 91 and the 215 it's so bad in sections you can't even go the speed limit safely. People are avoiding the lanes with the potholes they are so bad. If someone gets in an accident in these sections with	Thank you for your comment. Your opposition to the Project is acknowledged. Please note that road maintenance on SR-91 and I-215 are out of the scope of this Project. Please contact OCTA at (800) 600-9191 or RCTC at (951) 787-7141 for concerns regarding the 91 Express Lanes. For SR-215, please contact RCTC. The comment related to traffic improvements ending where the Project terminates is noted. I-15 will transition to three lanes at the south end of the corridor (in Lake Elsinore) in each direction (four lanes in the future, with a planned managed lane in each direction from Main Street in Lake Elsinore to the I-15/I-215 junction). As shown in Chapter 4 of the TOAR (*Design Variations* section), a variety of alternatives were tested at the express lane terminus section to help identify a lane drop transition that minimizes the bottleneck in that area. (The TOAR is available on the Project website: https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.) The Riverside County Transportation Department is responsible for the repair and maintenance of roads within the unincorporated areas of Riverside County; the Cities of Corona and Lake Elsinore are responsible for the repair and maintenance of city roadways; and Caltrans is responsible for the repair and maintenance of State highways and interstates. RCTC operates all existing and future express

Date and Time	Source	Name	Comment	Response
			the potholes I hope they sue.	lanes within Riverside County. Funding for the Project is provided by a combination of local, State, and federal sources. RCTC uses toll revenue to operate and maintain the express lanes and to repay the loan and bonds issued to fund construction of the new lanes. RCTC reinvests any remaining revenue after these obligations are paid in new transportation improvements to the corridor. The Project is intended to improve and manage traffic operations, throughput (traffic flow), and travel times along the I-15 corridor; expand travel mode choice; and provide a cost-effective mobility solution. Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. As discussed in Section 1.2, *Purpose and Need*, of the EIR/EA, due to forecasted population growth and continued development to support projected growth in the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021. For this Project, there are two alternatives under consideration: • The Build Alternative (Preferred Alternative) • No-Build Alternative The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option. As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth. Ultimately, the Project will benefit all users of the corridor.

Date and Time	Source	Name	Comment	Response
10/9/2024 7:38:47 PM	Facebook Comment	Jonnie Larson Mitchell	The project does NOT eliminate any lanes. It will ADD 2 toll lanes in the median (1 NB and 1 SB in that center dirt area). I'm not fond of toll lanes but it will be additional room for cars (No giant trucks allowed). It will be a long 2 year project but in the end it should help. Of course by then there will be more cars and trucks too. Still any addition should be better than none.	Thank you for your participation in the environmental review process for the Project and your overall support for the Project. Please note that the Project will add two northbound lanes and two southbound lanes within the median, for a total of four lanes.
10/23/2024 7:26:53 AM	Instagram Comment	old_saintnick	Please don't waste time and effort studying express lanes... Keep the median clear and start doing some preliminary engineering on the HSR alignment. We already know more lanes won't solve the traffic	Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion in the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below:

Date and Time	Source	Name	Comment	Response
			issue and express lanes only end up helping those with money. The tolls can be up to $30 one way for some commuters going into OC/LA. invest in public transit!!	https://www.riversideexpress.com/about#policies. Note that rail alternatives are not in the scope of this Project. However, RCTC is not hindering rail projects; rather, they are actively being researched as separate projects. RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County, including additional rail services throughout the county. 				https://www.rctc.org/contact-us/. Additionally, RCTC developed its first countywide Long Range Transportation Study, which was completed in early 2019. It provides a vision for what an integrated transportation system will look like in Riverside County in the next 20 years. The plan takes a comprehensive review of projects on State highways, regional arterials, rail and bus routes, freight networks, and active transportation systems, which include infrastructure and facilities that support human-powered and low-speed electronic assist transportation modes such as biking, walking, and using e-scooters. It also provides strategic guidance on the optimal placement and development of transportation projects within the region, ensuring they align with the overall vision for integrated mobility and make the most sense in terms of regional needs and priorities.
10/24/2024 9:05:55 PM	Facebook Comment	Chris Heth	Express lane on the 15 South and the way it was engineered has made traffic worse. Why are we paying tolls to drive our own roads??? Solution, add more lanes!! Improve infrastructure to accommodate the added housing and influx of thousands of people in Temescal Valley!!	Thank you for your comment. Please note that express lanes are public facilities that are optional and would be an addition to the existing general purpose lanes. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput, and travel times along the I-15 mainline, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth.

11/1/2024 8:31:02 AM	Instagram Comment	Nolan	cars ruin everything. put in a rail, dummies	Thank you for your comment. This Project is an express lanes project located entirely within the Caltrans ROW. Note that rail alternatives are not in the scope of this Project. However, RCTC is not hindering rail projects; rather, they are actively being researched as separate projects. RCTC has been proactive in providing travelers and commuters with multiple ways to traverse Riverside County, including additional rail services throughout the county. After implementation of the Perris Valley Line Rail Project in 2016, connecting the City of Riverside to the City of Perris, RCTC conducted a rail study to continue to expand long-term options for commuters. The objective of the Next Generation Rail Study (2019) was to review previously identified high-capacity transit corridors, identify potential new corridors, prioritize potential future rail corridors for proceeding into project development, and develop additional information and data needed to initiate planning for the high-priority corridors. RCTC is continually seeking innovative solutions to enhance mobility for residents, focusing not only on freeway improvements but also on expanding and improving transit services, including rail networks. RCTC continues to invest in rail projects through several key initiatives. These include the Coachella Valley-San Gorgonio Pass Rail Corridor Service Project, which aims to establish a daily intercity passenger rail service between Los Angeles and the Coachella Valley, and various Metrolink improvements such as double tracking and station enhancements to increase capacity and service reliability. Additionally, RCTC has secured significant funding for environmental studies and project-level analyses, including $23 million toward the $60 million needed for the Tier 2 Environmental Impact Statement/Environmental Impact Report for the Coachella Valley Rail project. These efforts demonstrate RCTC’s ongoing commitment to enhancing rail infrastructure and expanding regional mobility options. If you would like additional information on RCTC projects or have questions, please refer to the link below:

11/8/2024 10:10:31 AM	Facebook Comment	Robert Snyder	Trying, page not found!	Thank you for your participation in the environmental review process for the Project. Further information regarding the Project can be found at the link below: https://www.rctc.org/projects/i15-express-southern-extension/.
11/8/2024 4:02:43 PM	Facebook Comment	Shane Rush	Making people pay more to drive on roads they already pay to drive on. Crazy	Thank you for your comment. Please note that express lanes are optional and would be an addition to the existing general purpose lanes.
11/8/2024 4:46:44 PM	Facebook Comment	Gerardo Larios	Definitely against this. I'm sure they will want to charge $50 from Corona to Lake Elsinore on peak hours. We already pay taxes to build the roads,	Thank you for your comment. Your opposition to the Project is acknowledged. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip.

Date and Time	Source	Name	Comment	Response
			why should we pay more to use them?	Please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Additionally, express lanes provide drivers with a choice to pay for reliable travel times, offer a travel option for carpools of three or more riders, and offer transit providers a lane for commuter buses. The express lanes also provide RCTC with a significant, long-term funding source (tolls) to pay for the development, construction, maintenance, and operation of these toll projects and other transportation improvements along the corridor. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning.
11/8/2024 7:33:44 PM	Facebook Comment	Ryan Romeyn	Just build the stupid thing so we can get the freeway fixed at Cajalco. Over an hour of traffic every day to go from the 91 to Cajalco. Just finish the stupid road so we can commuted at a reasonable speed on the freeway again. And no way anyone will pay your crap prices that you charge to drive in the fastrak.	Thank you for your comment. Pending project approval, RCTC expects to use a progressive design-build method to expedite the delivery of the Project. Construction could begin in 2027, depending on funding availability. Please note that express lanes are optional and would be an addition to the existing general purpose lanes.

11/9/2024 6:56:43 AM	Facebook Comment	Marie Cavazos	This will just be a nightmare for commuters.	Thank you for your comment. Express lanes in Riverside County are designed to increase vehicular throughput (traffic flow) and provide travel options to any and all users of the corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free.
11/9/2024 11:55:03 AM	Facebook Comment	Robert May	Infrastructure. "I have a great idea, instead of making a 2 or 3 lane transition lane, let's make where it used to be and make it only one lane. But we'll make it 4 stories tall. Then we'll jack up the toll price, and jack up the price of gas to pay for it".	Thank you for your comment. Previous studies, engineering, Project scoping, and traffic and revenue study work were performed beginning in 2006. Since then, RCTC has led numerous environmental and preliminary engineering studies for projects, including along the I-15 corridor. It was determined that existing traffic volumes often exceed current highway capacity along several segments of I-15 between SR-74 (Central Avenue) and El Cerrito Road. Traffic congestion occurs primarily due to bottleneck conditions that limit throughput (traffic flow) capacity upstream and downstream along the Project corridor. These bottlenecks can cause congestion at lower traffic volumes than those at which congestion would typically occur for a single freeway segment in isolation. For example, the express lanes from SR-91 to Cajalco Road still have congestion at the southern terminus (which is also shown in the TOAR No-Build Alternative assessment). This is largely due to southbound I-15 transitioning from a six-lane facility south of Ontario Avenue (four general purpose lanes plus two express lanes) to a three-lane facility at Cajalco Road. The Project will manage this lane drop to a five-lane facility (three general purpose lanes plus two express lanes) and, as shown in the TOAR, would improve travel time (especially in the

Date and Time	Source	Name	Comment	Response
				opening year of the Project). Please refer to the link provided for a copy of the TOAR: https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf. This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning.
11/9/2024 4:42:17 PM	Facebook Comment	D.J. Peru	It's all a racket by officials taking away a lane or 2 that's already been paid for thru taxes then reopen and charge an exaggerated fee to drive the same freeway lane. Instead of adding a lane or two they take away two leaving you in traffic.	Thank you for your comment. As noted in the Project description in Section 1.3 of the Draft EIR/EA, two tolled express lanes would be constructed within the median, for a total of four lanes, and no general purpose lanes would be removed. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning.
11/9/2024 6:17:38 PM	Facebook Comment	Jean White	Know matter what you guys do it never gets any better	Thank you for your comment. Your comment has been noted. As included in S.4.1, *Purpose*, of the Draft EIR/EA, the purpose of the Project is to improve and manage traffic operations, throughput (traffic flow), and travel times along the corridor; expand travel mode choice; provide options for travel time reliability; provide a cost-effective mobility

Date and Time	Source	Name	Comment	Response
				solution; and expand and maintain compatibility with the express lane network in the region.
11/9/2024 10:41:11 PM	Facebook Comment	Victor Espinoza	It never gets better because there always too late.	Thank you for your comment. As described in Chapter 1, the purpose of the Project is to improve traffic operations, throughput (traffic flow), and travel times along the I-15 corridor, as well as to connect to other express lane networks to accommodate current and future year (2045) traffic volumes along the I-15 corridor resulting from projected growth in the area.
11/10/2024 10:42:23 AM	Facebook Comment	Michael Greenfield	Will this be a continuation of the ridiculous charge for the two mile stretch from Magnolia to Cajalco? What is the justification for that?	Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. 11/10/2024 6:46:26 PM	Facebook Comment	Michael Preti	Most of this section of freeway North and South was built for 4 lanes but striped for 3. Adding the 1 all purpose lane would be inexpensive.then if	Thank you for your comment. RCTC undertook a feasibility study to assess the viability of various project options, all of which focused on increasing vehicular throughput (traffic flow). The two-lane express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. As discussed in Section 1.4, *Alternatives*, of the Draft EIR/EA, one alternative considered as part of the development and design of the

Date and Time	Source	Name	Comment	Response
			you want to add toll lane add 1	Build Alternative (Preferred Alternative) consisted of adding a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, based on the projected traffic demands, future traffic volumes within the I-15 corridor would increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. The single-lane HOV 3+ alternative was dropped from further consideration because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective, and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy. The suggested approach to add general purpose lanes would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods, and do not allow trucks to utilize them. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network. Therefore, two alternatives for this Project are under consideration:

			for a California Revolution against these morons!!!	
11/11/2024 10:30:07 AM	Facebook Comment	Steven V Johnson	Toll lanes are built for revenue, not to improve traffic. It's another state rip off.	Thank you for your comment. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below: https://www.riversideexpress.com/about#policies. RCTC uses toll revenue to operate and maintain the express lanes and to repay the loan and bonds issued to fund construction of the new lanes. RCTC reinvests any remaining revenue after these obligations are paid in new transportation improvements to the corridor. The Project is intended to improve and manage traffic operations, throughput (traffic flow), and travel times along the I-15 corridor; expand travel mode choice; and provide a cost-effective mobility solution. Without planned improvements, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. As discussed in Section 1.2, *Purpose and Need*, of the EIR/EA, due to forecasted population growth and continued development to support projected growth in the region, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are projected to negatively affect traffic operations along the freeway mainline. This Project represents the next segment of improvements along the I-15 corridor and connects to the most recent enhancement project, the I-15 ELP, which began construction in 2021. For this Project, there are two alternatives under consideration: • The Build Alternative (Preferred Alternative)

11/12/2024 7:02:46 AM	Facebook Comment	Sergio Layseca	Boycott lanes and vote them crooks out!! They should be ashamed!	Thank you for your participation in the environmental review process for the Project. The California Transportation Commission is composed of 11 voting members and two non-voting ex-officio members. Of the 11 voting members, nine are appointed by the Governor, one by the Senate Rules Committee, and one by the Speaker of the Assembly. The two ex-officio non-voting members are typically the chairs of the transportation policy committees in the State Senate and Assembly. For more information regarding the California Transportation Commission and voting processes, please refer to the link provided: https://catc.ca.gov/about.
11/12/2024 1:31:35 PM	Facebook Comment	Dallas Pfister	Just expand the “FREEWAYS “ it will relieve traffic. Isn’t that what gas tax is for anyways?	Thank you for your comment. RCTC undertook a feasibility study to assess the viability of various project options, all of which focused on increasing vehicular throughput (traffic flow). The express lanes option provided the largest fundable capacity increase in the short to medium term and was the only option capable of providing congestion relief. In addition, because construction would largely occur within the I-15 median and existing ROW, fewer environmental impacts would occur. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits when they are opened to traffic, and future project improvements along the I-15 corridor. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning.
11/12/2024 4:07:23 PM	Facebook Comment	Jimmy Little	Don’t you just love it when they put up the cal Trans sign that says, YOUR TAX DOLLARS	Thank you for your comment. Please note that the I-15 express lanes are publicly owned and operated, with all toll revenue paying for the cost of initial project construction, operation, and maintenance of I-15 within the Project limits

Date and Time	Source	Name	Comment	Response
			HARD AT WORK! And then make it a toll road! Fast track my ass! Where is all that money going?	when they are opened to traffic, and future project improvements along the I-15 corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The rising toll cost during congestion periods is designed to keep the lanes flowing with vehicular throughput (traffic flow) and is not profit based. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning.
11/12/2024 6:39:26 PM	Facebook Comment	Rex Rowley	Nothing like using taxpayer funding to pay for stuff that excludes lower classes. To go from McKinley to OC line was 17.50 at 345pm on a Thursday. That's outbound??	Thank you for your comment. Express lanes in Riverside County are public toll facilities designed to increase vehicular throughput (traffic flow) and provide travel options to all users of the corridor. Toll rates are based on dynamic pricing, which allows tolls to be based on real-time traffic conditions, which may vary according to the congestion on the express lanes. The goal with this type of pricing is to make sure traffic in the express lanes is flowing smoothly, resulting in a more reliable trip. Also please note that the managed lanes provide an opportunity for HOV 3+ users with a transponder to use the facility for free. Additional detailed information regarding RCTC's I-15 Express Lanes Toll Policy can be found at the link below: https://www.riversideexpress.com/about#policies. Please refer to the following link regarding RCTC funding: https://www.rctc.org/funding-and-planning/#planning. Express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings

Date and Time	Source	Name	Comment	Response
				beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017). The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users because it could improve transit performance, leading to a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities. Also, Mitigation Measure **AQ-5** has been implemented, which assists in minimizing impacts on travelers. Additional Mitigation Measures **AQ-6** through **AQ-8** will provide increased transit benefits, both regionally and along the I-15 corridor. As part of Mitigation Measure **AQ-5**, RCTC launched the Riverside County Free Rail Pass Program in March 2025 (https://www.rctc.org/ride-train-free-experience-metrolink-program/). The 2-year program offers Metrolink passes to Riverside County residents to increase the number of passenger rail riders within Riverside County. Eligible participants can ride free on any and all Metrolink lines serving Riverside County for a period of 3 months from the date they receive their first pass. During this 3-month window, they may receive and use as many non-overlapping passes as needed. This program helps expand access to public transportation and encourages a mode shift for travelers on the most congested corridors, such as SR-91, SR-74, I-15, and I-215. These temporary free Metrolink passes reduce the cost of using public transportation in order to attract new riders and encourage existing riders to take more trips. The program allows riders to be issued free passes through Metrolink's Mobile Ticketing Application and

Date and Time	Source	Name	Comment	Response
				reduces the financial barriers of trying public transportation. For riders without access to mobile devices, physical fare cards are mailed and can be reloaded as needed. If additional future funding becomes available, then RCTC will extend this program beyond the initial 2-year period. As part of Mitigation Measure **AQ-5**, RCTC will also work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona (https://www.riversidetransit.com/index.php/riding-the-bus/commuterlink-express). At a minimum, RTA buses would be permitted to use the express lanes at no cost within the Project limits upon the opening of the Project. Vanpools provide a high-capacity transportation option for individuals whose travel needs are not met by traditional bus or rail transit, reducing vehicle travel and improving air quality. This reduction in vehicle use directly contributes to improved air quality by decreasing the number of individual vehicles on the road, thereby lowering emissions. As part of Mitigation Measure **AQ-6**, RCTC will continue supporting vanpooling in Riverside County by committing $15 million to fund vanpool subsidies through a component of the VanClub program (vanclub.net) over a 5-year period beginning in 2030. This includes the launch of an Incremental Vanpool Subsidy Program (https://www.vanclub.net/rp2/home/faq) to supplement existing subsidies from regional agencies such as Metro, OCTA, SANDAG, and SBCTA. By enhancing vanpool affordability, the program aims to increase vanpool participation, support long-distance commuters, and promote sustainable commuting options. This increased participation will lead to a reduction in congestion and vehicle travel, resulting in fewer emissions and improved air quality across the region. IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a

Date and Time	Source	Name	Comment	Response
				separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin. The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents. RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents. Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including:

Date and Time	Source	Name	Comment	Response
				• 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona) • 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets) • 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride) This Project would secure approximately 94 additional leased spaces within the I-15/ Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire.
11/13/2024 7:07:05 AM	Facebook Comment	Sandra Maynard-Jones	It's all about greed, greed, greed. Nothing about making the lives of the tax payers	Thank you for your comment. 11/13/2024 10:44:38 AM	Facebook Comment	Michael Greenfield	Shorty Teasdale Problem is they don't use it and it creates a bottleneck at that stretch. Also makes the toll lane useless. I have tried numerous times to find the justification for this and no one from RTA will answer this question.	Thank you for your comment. The comment related to the bottleneck is noted. I-15 will transition to three lanes at the south end of the corridor (in Lake Elsinore) in each direction (four lanes in the future with a planned managed lane in each direction from Main Street in Lake Elsinore to the I-15/I-215 junction). As shown in Chapter 4 of the TOAR (*Design Variations* section), a variety of alternatives were tested at the express lane terminus section to help identify a lane drop transition that minimizes the bottleneck in that area. (The TOAR is available on the Project website: https://www.rctc.org/wp-content/uploads/2024/10/15ELPSE_Traffic-Operations-Analysis-Report_April-2022.pdf.) RCTC undertook a feasibility study to assess the viability of various project options, all of which focused on increasing vehicular throughput (traffic flow). IE Commuter (iecommuter.org) serves as RCTC's flagship Commuter Assistance (rideshare/TDM) program, administered jointly with SBCTA, and supports commuters and employers across Riverside and San Bernardino Counties. Within this framework, VanClub (vanclub.net) is a separate vanpool subsidy program managed solely by RCTC, offering subsidies to eligible vanpools commuting to worksites in Riverside County, regardless of their origin. The proposed Incremental Vanpool Subsidy Program would introduce a new origin-based subsidy exclusively for Riverside County residents, regardless of their destination county. Although distinct from the existing VanClub program, it would be marketed under the VanClub brand as a special bonus incentive for Riverside County residents.

Date and Time	Source	Name	Comment	Response
				RCTC has developed and is currently administering the IE Commuter rideshare program, which is a component of RCTC's premier Commuter Assistance program, designed to shift commuter behavior toward sustainable transportation options to worksites, thereby improving air quality. The program provides services, including ride matching assistance, marketing materials, and promotional incentives. Employees benefit from personalized commuting solutions such as carpool and vanpool matching, customized transit itineraries, and incentives like the $5/Day Rideshare Incentive (https://www.rctc.org/5day-incentive/). Additionally, participants have access to the Guaranteed Ride Home program, offering emergency ride options to ensure flexibility and reliability for those using alternative commute modes (https://www.iecommuter.org/rp2/home/CommuterIncentives?page=grh). These programs collectively contribute to reduced vehicle travel and translate to lower emissions. Under Mitigation Measure **AQ-7**, RCTC will provide 12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents. Additionally, as part of Mitigation Measure **AQ-8**, RCTC will extend park-and-ride leases beyond their current expiration in 2029, and expand the network to secure an estimated 300 leased spaces along the I-15 corridor through Temescal Valley to support growing commuter demand and promote multimodal transportation options. Currently, there are 206 leased spaces in the area, including: • 75 spaces at I-15/Ontario Avenue (Canyon Community Church, Corona) • 91 spaces at I-15/Nichols Road (Lake Elsinore Outlets) • 40 spaces at I-15/Dexter Avenue (Caltrans Park & Ride) This Project would secure approximately 94 additional leased spaces within the I-15/Temescal Valley area to meet future demand. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. Note

Date and Time	Source	Name	Comment	Response
				that the number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation. This initiative will reduce vehicle emissions by encouraging carpooling and public transit use, thereby improving regional air quality. The program is designed to be equitable, ensuring access to all community members, and will be implemented through a multi-phase approach involving site identification, stakeholder coordination, compliance, and ongoing operations. The leasing agreements, structured as three-party contracts between the property owner, Caltrans, and RCTC, are designed to enhance air quality by reducing vehicle emissions through increased carpooling and public transit use. This program prioritizes equitable access for all community members, ensuring that everyone can benefit from improved air quality and sustainable transportation options, accommodating growing commuter demand and acknowledging the public's desire for multiple choices of transportation opportunities in the Inland Empire. Furthermore, express lanes are designed and made available to all users. The use of tolled lanes may constitute a higher financial burden on some regional travelers. Analysis of potential toll prices has indicated that there could be times when a driver would find the express lanes' time savings attractive. For example, studies show that a driver may find time savings beneficial when running late for work, or for other reasons, such as that a toll might be less expensive than per-minute late fees at a daycare center (OEHHA 2017). The toll policies for the Project would include free in-service transit vehicles, such as commuter bus service operations, as a component in the express lanes, consistent with the I-15 Express Lanes Toll Policy Goals and Toll Policies adopted by RCTC. The Build Alternative (Preferred Alternative) would potentially improve traffic conditions for highway users, because it could improve transit performance, leading to

Date and Time	Source	Name	Comment	Response
				a more reliable, faster, more frequent, and more accessible transit system for the communities relying on the I-15 corridor for travel. Please see Section 2.2.4, *Community Character and Cohesion*, for additional information about how the Build Alternative (Preferred Alternative) would improve mobility for all users, residents, and businesses that provide employment and services for the surrounding communities.
11/24/2024 11:50:05 AM	Facebook Comment	Rich Scott	How about 2 EXTRA lanes NOT TOLL lanes to bypass Temecula and Murrieta ? Enter in at Mission rd Fallbrook & exit after Cal Oaks . Using a solid barrier	Thank you for your participation in the environmental review process for the Project. As discussed in Section 1.4, *Alternatives*, of the Draft EIR/EA, one alternative considered as part of the development and design of the Build Alternative (Preferred Alternative) consisted of adding a single HOV 3+ lane in each direction along I-15 between SR-74 (Central Avenue) and Cajalco Road. However, based on the projected traffic demands, future traffic volumes within the I-15 corridor would increase so much that the addition of a single HOV 3+ lane in each direction would not have met the purpose and need of the Project. Based on a review of anticipated future funding for projects in Riverside County, it was determined that funding of an additional lane on I-15 from SR-74 (Central Avenue) to Cajalco Road could only be reasonably accomplished through the construction of a tolled facility along I-15. The single-lane HOV 3+ alternative was dropped from further consideration because the HOV 3+ alternative did not meet the Project's purpose and need from a traffic operations perspective, and the express lanes option includes discounted HOV 3+ provisions in the proposed toll policy. The suggested approach to add general purpose lanes would likely result in increased congestion and the loss of a reliable free-flow travel option. Toll lanes are designed as managed lanes that use pricing to regulate demand and maintain consistent traffic flow, even during peak travel periods, and do not allow trucks to utilize them. By contrast, general purpose lanes are open to all vehicles without any form of demand management. If toll lanes were converted to general purpose lanes, the additional capacity would quickly be absorbed by existing and

Date and Time	Source	Name	Comment	Response
				latent demand, leading to congestion levels similar to or worse than current conditions. Moreover, the removal of toll lanes would eliminate a critical travel choice for users who prioritize time savings and reliability, including transit vehicles, emergency responders, and commuters with time-sensitive needs. This would reduce overall corridor efficiency and limit the ability to provide multimodal benefits. Therefore, maintaining toll lanes as managed lanes supports the Project's purpose of improving throughput (traffic flow), expanding mode choice and travel time reliability, and expanding and maintaining compatibility with the regional express lane network. Therefore, two alternatives are under consideration for this Project: • The Build Alternative (Preferred Alternative) • The No-Build Alternative The Build Alternative (Preferred Alternative) meets the Project's purpose and need and is therefore the most logical option.
11/24/2024 9:24:52 PM	Facebook Comment	Alfredo Vasquez	So against more expensive lanes, how about keeping it "Freeways"	Thank you for your comment. Your opposition to the Project is acknowledged.
11/25/2024 12:46:56 PM	Facebook Comment	Frank Train	Everyone is against the toll lanes. The only way is to sue the city county and state - then they will listen.	Thank you for your comment. Your opposition to the Project is acknowledged. Please note that express lanes are optional and would be an addition to the existing general purpose lanes.

Notice of Preparation

October 21, 2019

To: Reviewing Agencies

Re: Interstate 15 Express Lanes Project Southern Extension
SCH# 2019100381

Attached for your review and comment is the Notice of Preparation (NOP) for the Interstate 15 Express Lanes Project Southern Extension draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Shawn Oriaz
Caltrans, District 8 - San Bernardino/Riverside
464 W. 4th Street, MS 827
San Bernardino, CA 92401-1400

with a copy to the State Clearinghouse in the Office of Planning and Research at state.clearinghouse@opr.ca.gov . Please refer to the SCH number noted above in all correspondence concerning this project on our website: https://ceqanet.opr.ca.gov/2019100381/2 .

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Subject: **Notice of Preparation of a Draft Environmental Impact Report**
Reference: California Code of Regulations, Title 14, (CEQA Guidelines) Sections 15082(a), 15103, 15375.

Project Title: Interstate 15 Express Lanes Project Southern Extension

Project Location: Along Interstate 15 in the County of Riverside, from State Route 74 in the City of Lake Elsinore (Post Mile [PM] 22.3) to Cajalco Road in the City of Corona (PM 36.8).

Project Description: The proposed project would extend the I-15 Express Lanes currently under construction, an additional 14.5 miles. The proposed new segment would extend from State Route 74 (Central Avenue) (post mile [PM] 22.3) in Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley, to Cajalco Road (PM 36.8) in Corona. The project proposes to increase capacity by adding two tolled express lanes in both directions within the I-15 median to accommodate increasing traffic volumes in southwestern Riverside County. Associated improvements, including advance signage and transition striping, would extend two miles from each end of the project limits to PM 20.3 in the south and PM 38.8 in the north.

This is to inform you that the California Department of Transportation will be the lead agency and will prepare an environmental impact report for the project described below. Your participation as a responsible agency is requested in the preparation and review of this document.

We need to know the views of your agency as to the scope and content of the environmental information that is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

A more detailed project description, location map, and the potential environmental effects are contained in the attached materials.

A copy of the Initial Study is not attached.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please direct your response to Shawn Oriaz, Senior Environmental Planner, California Department of Transportation, District 8 – Environmental Studies "C,"
Telephone (909) 388-7034, at the address shown above or e-mail: 15expsouth@dot.ca.gov
Please supply us with the name for a contact person in your agency.

Title SENIOR ENVIRONMENTAL PLANNER

Attachment: Project Information

Introduction

The Riverside County Transportation Commission (RCTC) and the California Department of Transportation (Caltrans) District 8 propose to develop a tolled express lane network to meet existing and future travel demand, enhance mobility, and afford greater user flexibility on Interstate 15 (I-15) in Riverside County. The proposed project would extend the I-15 Express Lanes currently under construction, an additional 14.5 miles. The proposed new segment would extend from State Route 74 (Central Avenue) (post mile [PM] 22.3) in Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley, to Cajalco Road (PM 36.8) in Corona. The project proposes to increase capacity by adding two tolled express lanes in both directions within the I-15 median to accommodate increasing traffic volumes in southwestern Riverside County. Associated improvements, including advance signage and transition striping, would extend two miles from each end of the project limits to PM 20.3 in the south and PM 38.8 in the north.

Project Location and Description

Local and Regional Setting

The lane improvements within Riverside County would run through the cities of Lake Elsinore and Corona, as well as the unincorporated Riverside County community of Temescal Valley (Figure 1, Project Location). All proposed improvements would be constructed within the existing Caltrans right of way, with the majority of the improvements occurring within the existing I-15 median.

The existing I-15 corridor within the project limits is a six-lane highway with three mixed flow lanes in each direction and paved shoulders. Recent improvements along State Route 91 (SR-91) constructed as part of the SR-91 Corridor Improvement Project (SR-91 CIP) within the City of Corona includes the easterly extension of the 91 Express Lanes from the Orange County Line to just east of I-15 and a direct connector between the eastbound 91 Express Lanes and southbound I-15, as well as a direct connector between northbound I-15 and the westbound 91 Express Lanes. RCTC is also currently constructing tolled express lanes along I-15 between State Route 60 (SR-60) and Cajalco Road, which will provide two tolled express lanes in each direction as part of the I-15 Express Lanes Project (I-15 ELP). Construction of that project began in 2018 and is expected to be completed in the second half of 2020. This proposed I-15 ELPSE would construct tolled express lanes from Corona to Lake Elsinore, which would extend the existing tolled express lane system from Corona south to Lake Elsinore.

The I-15 ELPSE is listed in the financially constrained Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which was approved by the Southern California Association of Governments (SCAG) on April 7, 2016, under RTP ID 3160001 The project is also included in the financially constrained 2019 Federal Transportation Improvement Program (FTIP) (Project ID: RIV170901, In Western Riverside County – I-15 Express Lanes Southern Extension (generally in the median) from Cajalco Road [PM 36.8] in the City of Corona to approximately SR-74 [PM 22.3] in the City of Lake Elsinore [PPNO 3009X]).

Physical Setting and Surrounding Land Uses

Within the project limits, from State Route 74 (SR-74) in the south to Cajalco Road in the north, the I-15 corridor traverses valleys and rolling terrain bounded by the Temescal Mountains to the east and the Santa Ana Mountains to the west. There are a number of drainages in the area, eight of which are within the proposed project limits. The elevation in the area of the project varies from approximately 1,320 feet at the southern limits of the project, near SR-74, to 900 feet at the northern limits of the project, near Cajalco Road.

Current land uses along the project limits vary greatly depending upon location along the corridor. Industrial, commercial, and residential developments abut the I-15 right of way through Lake Elsinore, the unincorporated Riverside County community of Temescal Valley, and Corona. Commercial developments tend to be concentrated along or near the on/off-ramp entrances and exits, while the residential developments tend to be located between the on/off-ramps. In addition to the developed areas, undeveloped commercial, industrial, and residential parcels, hills, and/or floodplains coexist within the developed areas. In some of the unincorporated parts of Riverside County, between the city boundaries, there are large open space areas with native habitat that exist alongside the I-15 corridor, within the project limits.

Project Purpose

The primary purpose of the proposed project is to improve traffic operations and travel time reliability, expand the region's tolled express lanes network, and provide a new transportation option for motorists in southwestern Riverside County as summarized below:

- Improve traffic operations and travel times.
- Expand travel choice through carpooling and transit with the addition of tolled express lanes.
- Increase travel time reliability and mobility options.
- Accommodate long-term congestion management.
- Provide a cost-effective mobility solution.
- Expand the tolled express lane network in the region.

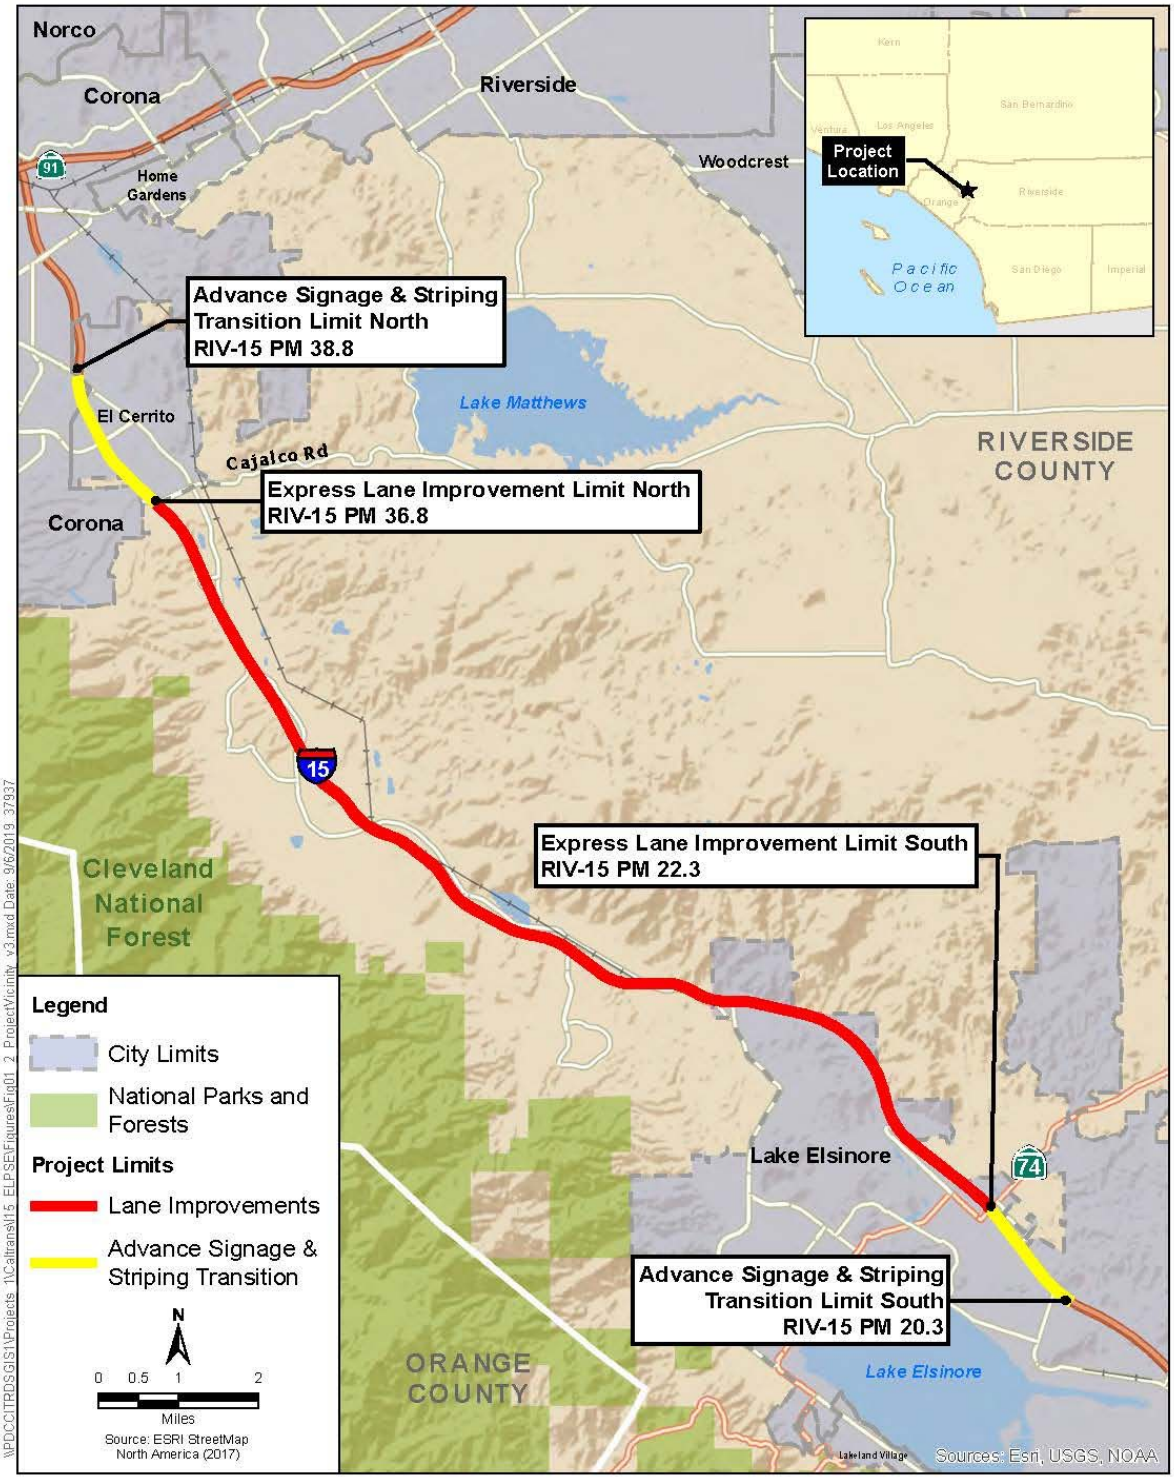

Figure 1
Project Location
Interstate 15 Express Lanes Project Southern Extension

This page is intentionally left blank.

Project Need

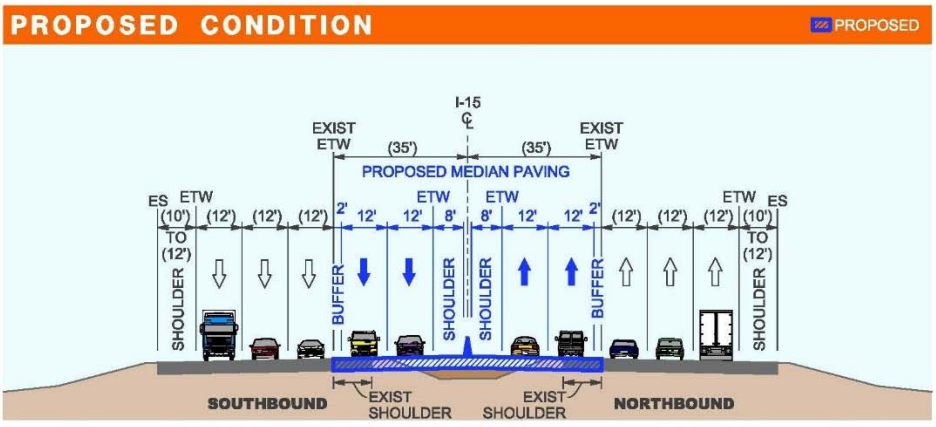
Existing traffic volumes exceed available highway capacity and travel forecasts indicate continued traffic volume growth on the I-15 corridor. Due to continued development in the area of the project limits, the I-15 corridor is expected to continue to experience increased congestion and longer commute times that are likely to further degrade the roadway capacity and traffic flow of the highway mainline.

The expected increase in congestion and deteriorating traffic conditions within the project limits are anticipated to reduce the overall function of the facility as a free-flow highway and would decrease overall local and regional mobility for the motoring public. Existing heavy peak hour congestion and traffic delays due to high traffic volume, along with weaving and merge/diverge movements, continue to reduce mobility along mainline I-15. Recurring daily congestion resulting from travel demand exceeding available highway capacity results in slower travel speeds and increased travel times.

Average travel times are increasing along I-15 within the project limits, as is the variability of time. Non-recurring congestion (non-recurring because it happens differently every day) increases travel variability in the corridor. Because of the unreliable travel times, people must allow extra time for travel during more congested conditions to be sure they will arrive at their destination on time.

Build Alternative

The proposed project includes construction of two tolled express lanes in each direction on I-15 in Riverside County between PM 22.3 and PM 36.8. The proposed project would be constructed within the existing right of way. The tolled express lanes would be used by vehicles for a toll and would also serve as high-occupancy vehicle (HOV) lanes for HOV 3+ users for a reduced toll. The toll rate would be adjusted based on congestion. These improvements would enhance regional mobility and offer greater user flexibility of the regional transportation system. Sign modifications and the installation of new signs would also be included to support the new tolled express lanes. Advanced signage is required to be posted a minimum of two miles prior to the start of the tolled express lanes. Signage will be located within the project limits between PM 20.3 and PM 38.8.



The proposed project does not intend to add new connections or improve existing ramps within the project limits.

Additional Project Features

In addition to the features described above, the proposed project includes additional components, such as retaining walls, noise barriers, stormwater runoff treatment devices, and bridge widening (Table 2), in order to accommodate the tolled express lanes. The proposed project is planned to be constructed within the existing Caltrans right of way.

Table 2. Proposed Bridge Improvements

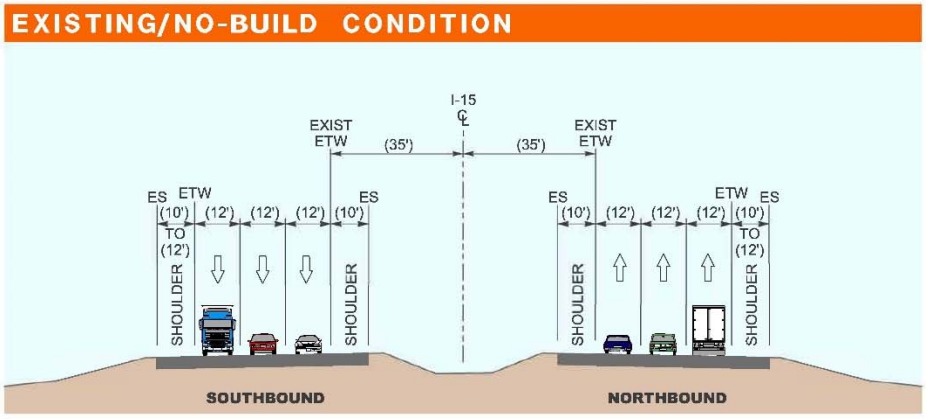
Existing Bridge Name	Proposed Improvement
Gavilan Wash	Inside widening between existing NB & SB decks
Lake Street Undercrossing	Inside widening between existing NB & SB decks
Temescal Canyon Road Overhead	Inside widening between existing NB & SB decks
Temescal Wash	Inside widening between existing NB & SB decks
Horsethief Canyon Road Undercrossing	Inside widening between existing NB & SB decks
Horsethief Canyon Wash	Inside widening between existing NB & SB decks
Indian Wash	Inside widening between existing NB & SB decks
Indian Truck Trail Undercrossing	Inside widening between existing NB & SB decks
Temescal Canyon Road Undercrossing	Inside widening between existing NB & SB decks
Mayhew Wash	Inside widening between existing NB & SB decks
Coldwater Wash	Inside widening
Temescal Canyon Road Undercrossing	Inside widening between existing NB & SB decks
Brown Canyon Wash	Inside widening (outside widening may be required)
Weirick Road Undercrossing	Inside widening (outside widening may be required)
Bedford Wash	Inside widening (outside widening may be required)

Ingress and Egress Locations

The project would include multiple entrance and exit points to access the tolled express lane facility. Access into the tolled express lanes would be separated from the general purpose lanes with delineators and would be restricted for a specific length. Locations where vehicles are permitted to enter the tolled express lanes are termed “ingress” locations; locations where vehicles may leave the tolled express lanes are referred to as “egress” locations.

No-Build Alternative

Under the No-Build Alternative, the I-15 ELPSE would not be constructed. This alternative does not meet the project purpose and need; however, it would not preclude the construction of future improvements or general maintenance activities. Even without construction of the proposed I-15 ELPSE, limited improvements on I-15 associated with the approved I-15 ELP are being constructed for opening in 2020. Describing and analyzing a No-Build Alternative helps both decision-makers and the public to compare the impacts of approving the proposed project with the consequences of not approving the proposed project.



Scoping Process

Per the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA), agencies are required to analyze and document potential project impacts to environmental resources. Preparation of environmental studies and impact assessments are required. Circulation of these documents to other agencies and the public for comment is necessary before a decision is made regarding the approval and implementation of the proposed project. It has been determined that an Environmental Impact Report (EIR) and Environmental Assessment (EA) will be prepared for the proposed project to comply with CEQA/NEPA.

Probable Environmental Effects

The proposed project could result in environmental effects on the following resources, which will be fully evaluated in the EIR/EA:

- Aesthetics/Visual
- Air Quality
- Biological Resources
- Community Impacts
- Cultural Resources
- Energy Resources
- Geology and Soils
- Paleontological Resources
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials

- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Traffic/Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire
- Cumulative Impacts

Permits and Approvals: Based on the probable effects anticipated as a result of the proposed project, the following federal and state permits and approvals could be required.

- Consistency Determination of the DBESP by USFWS and CDFW
- Section 401 Permit issued by the Santa Ana Regional Water Quality Control Board
- Section 404 Permit issued by the U.S. Army Corps of Engineers
- Lake and Streambed Alteration Agreement by CDFW
- Section 106 Finding of Effect by the California Office of Historic Preservation
- Section 4(f) De Minimis Finding, which is issued by the California Department of Transportation

Public Involvement during the Environmental Process

There are several ways to get involved with the environmental process. Opportunities for public involvement include:

- Review and respond to the Notice of Preparation (NOP), which is available for review at the following public offices:
    - California Department of Transportation, District 8, 464 W, 4th Street, San Bernardino, CA 92401-1400
    - Riverside County Transportation Commission, 4080 Lemon Street, 3rd Floor, Riverside, CA 92501
    - Lake Elsinore City Hall, 130 South Main Street, Lake Elsinore, CA 92530
    - Corona City Hall, 400 S. Vicentia Avenue, Corona, CA 92882
    - Lake Elsinore Library, 600 W. Graham, Lake Elsinore, California 92530
    - El Cerrito Branch Library, 7581 Rudell Road, Corona, California 92881
- Attend scoping meetings. The following provides information on the meetings:
    - Temescal Valley Scoping Meeting: Tuesday, November 12, 2019 from 6 p.m. to 8 p.m. at Temescal Valley Elementary School, 22950 Claystone Avenue, Corona, CA 92883

    - Corona Scoping Meeting: Wednesday, November 13, 2019 from 6 p.m. to 8 p.m. at Eagle Glen Golf Club, 1800 Eagle Glen Pkwy, Corona, CA 92883
    - Lake Elsinore Scoping Meeting: Thursday, November 14, 2019 from 6 p.m. to 8 p.m. at Ortega High School, 520 Chaney Street, Lake Elsinore, CA, 92530
- Visit rctc.org/15expsouth for a public scoping "Online Meeting." The online meeting will feature the same exhibits as the in-person meetings and will offer an opportunity to submit comments throughout the public scoping period.
- Review and comment of the draft EIR/EA when circulated for public review.
- Attend public hearing(s)/meeting(s) regarding the draft EIR/EA
- Review responses to comments on the Final EIR/EA

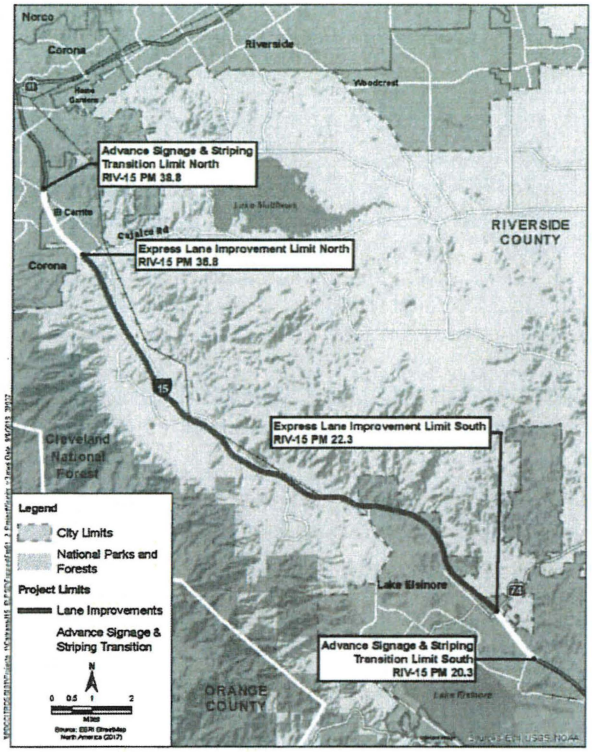
PUBLIC NOTICE

Public Notice

Interstate 15 (I-15) Express Lanes Project Southern Extension

Announcement of Public Scoping Meetings



WHAT IS BEING PLANNED?

The California Department of Transportation (Caltrans), in cooperation with the Riverside County Transportation Commission (RCTC), proposes to extend the I-15 Express Lanes currently under construction, an additional 14.5 miles. The proposed new segment would extend from State Route 74 (Central Avenue) in Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley, to Cajalco Road in Corona. The project proposes to increase capacity by adding two tolled express lanes in both directions within the I-15 median to accommodate increasing traffic volumes in southwestern Riverside County. Associated improvements, including advance signage and transition striping, would extend two miles from each end of the project limits. An Environmental Impact Report (EIR) and Environmental Assessment (EA), to comply with the California Environmental Quality Act (CEQA), and National Environmental Policy Act (NEPA), respectively, will be prepared to evaluate alternatives, as well as potential environmental impacts that could result from the proposed project.

WHY THIS NOTICE?

To inform you of the initiation of studies and give you the opportunity to comment on the proposed project. Three Public Scoping Meetings (listed below), will be held to provide an early exchange of information and ideas, with the opportunity for the public to ask questions or express concerns. Comments will become part of the public record, as part of the draft environmental document, and will be considered in defining the project scope and developing the EIR/EA.

WHEN AND WHERE?

Temescal Valley Meeting
Date: Tues., November 12, 2019
Time: 6 p.m.- 8 p.m.
Place: Temescal Valley Elementary School
Address: 22950 Claystone Ave, Corona, 92883

Corona Meeting
Date: Wed., November 13, 2019
Time: 6 p.m.- 8 p.m.
Place: Eagle Glen Golf Club
Address: 1800 Eagle Glen Pkwy, Corona, 92883

Lake Elsinore Meeting
Date: Thurs, November 14, 2019
Time: 6 p.m.- 8 p.m.
Place: Ortega High School
Address: 520 Chaney St., Lake Elsinore, 92530

WHAT IS AVAILABLE AT THE PUBLIC SCOPING MEETINGS?

The purpose and need for the project, preliminary alternative concepts, schedule and costs, and other exhibits will be available for viewing. Caltrans and RCTC specialists in engineering, planning, traffic, and environmental will be available to discuss your individual concerns and answer your questions. The meetings will be held in an open house format with no formal presentation. Public comments are encouraged in written format and via a court reporter. The content of the three meetings will be the same; please attend the meeting that is most convenient for you, any time between 6 p.m. and 8 p.m. In addition, an online meeting option is available by visiting rctc.org/15expsouth The online meeting will feature the same exhibits as the in-person meetings and will offer an opportunity to submit comments via the project website or e-mail (see below).

WHERE YOU COME IN

Comments about the project may be submitted in person at the Public Scoping Meetings on November 12, November, 13, and November 14, 2019, or via mail by November 22, 2019 to: Shawn Oriaz, California Department of Transportation, District 8 – Environmental Studies "C," 464 W. 4th Street, MS-827, San Bernardino, CA 92401-1400 or e-mail to 15expsouth@dot.ca.gov
For more information about this study, call Caltrans at (909) 388-7034
Comments may also be submitted online by November 22 2019 at the I-15 Express Lane Project Southern Extension website at: rctc.org/15expsouth

SPECIAL ACCOMMODATIONS

For individuals who require accommodations (American Sign Language or other lingual interpreter, accessible seating, documentation in alternate formats, etc.) contact Caltrans at (909) 383-2841 at least one week in advance. TDD users may contact the California Relay Service TDD line at 800-735-2929.

Subject: Notice of Preparation of a Draft Environmental Impact Report
Interstate 15 Express Lanes Southern Extension Project
State Clearinghouse No. 2019100381

Dear Mr/Ms. Oriaz:

The California Department of Fish and Wildlife (CDFW) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) from the California Department of Transportation (Caltrans) for the Interstate 15 Express Lanes Southern Extension Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1]

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW ROLE

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during

1 CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.)

PROJECT DESCRIPTION SUMMARY

The proposed project would extend the Interstate 15 (I-15) Express Lanes currently under construction an additional 14.5 miles: from State Route 74 (SR-74)/Central Avenue in the City of Lake Elsinore, north through the unincorporated Riverside County community of Temescal Valley, to Cajalco Road in the City of Corona. The Project proposes to increase capacity by adding two tolled express lanes in both direction within the existing I-15 median to accommodate increasing traffic volumes. Associated improvements, including advance signage and transition striping, would extend two miles from each of the project end limits.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist Caltrans in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. The comments and recommendations are also offered to enable CDFW to adequately review and comment on the proposed Project with respect to the Project's consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). CDFW recommends that the forthcoming DEIR address the following:

Assessment of Biological Resources

Section 15125(c) of the CEQA Guidelines states that knowledge of the regional setting of a project is critical to the assessment of environmental impacts and that special emphasis should be placed on environmental resources that are rare or unique to the region. To enable CDFW staff to adequately review and comment on the project, the DEIR should include a complete assessment of the flora and fauna within and adjacent to the project footprint, with particular emphasis on identifying rare, threatened, endangered, and other sensitive species and their associated habitats.

The CDFW recommends that the DEIR specifically include:

1. An assessment of the various habitat types located within the project footprint, and a map that identifies the location of each habitat type. CDFW recommends that floristic, alliance- and/or association-based mapping and assessment be completed following *The Manual of California Vegetation*, second edition (Sawyer et al. 2009).

Adjoining habitat areas should also be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions.

2. A general biological inventory of the fish, amphibian, reptile, bird, and mammal species that are present or have the potential to be present within each habitat type onsite and within adjacent areas that could be affected by the project. CDFW's California Natural Diversity Database (CNDDB) in Sacramento should be contacted at (916) 322-2493 or CNDDB@wildlife.ca.gov to obtain current information on any previously reported sensitive species and habitat, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code, in the vicinity of the proposed project.

   Please note that CDFW's CNDDB is not exhaustive in terms of the data it houses, nor is it an absence database. CDFW recommends that it be used as a starting point in gathering information about the *potential presence* of species within the general area of the project site.

3. A complete, *recent* inventory of rare, threatened, endangered, and other sensitive species located within the project footprint and within offsite areas with the potential to be affected, including California Species of Special Concern (CSSC) and California Fully Protected Species (Fish and Game Code § 3511). Species to be addressed should include all those which meet the CEQA definition (CEQA Guidelines § 15380). The inventory should address seasonal variations in use of the project area and should not be limited to resident species. Focused species-specific/MSHCP surveys, completed by a qualified biologist and conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with CDFW and the U.S. Fish and Wildlife Service, where necessary. Note that CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed project may warrant periodic updated surveys for certain sensitive taxa, particularly if the project is proposed to occur over a protracted time frame, or in phases, or if surveys are completed during periods of drought.

4. A thorough, recent, floristic-based assessment of special status plants and natural communities, following CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities* (see https://www.wildlife.ca.gov/Conservation/Plants).

5. Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region (CEQA Guidelines § 15125[c]).

6. A full accounting of all mitigation/conservation lands within and adjacent to the Project.

Analysis of Direct, Indirect, and Cumulative Impacts to Biological Resources

The DEIR should provide a thorough discussion of the direct, indirect, and cumulative impacts expected to adversely affect biological resources as a result of the project. To ensure that project impacts to biological resources are fully analyzed, the following information should be included in the DEIR:

1. A discussion of potential impacts from lighting, noise, human activity (e.g., recreation), defensible space, and wildlife-human interactions created by zoning of development projects or other project activities adjacent to natural areas, exotic and/or invasive species, and drainage. The latter subject should address project-related changes on drainage patterns and water quality within, upstream, and downstream of the project site, including: volume, velocity, and frequency of existing and post-project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and post-project fate of runoff from the project site.

2. A discussion of potential indirect Project impacts on biological resources, including resources in areas adjacent to the project footprint, such as nearby public lands (e.g. National Forests, State Parks, etc.), open space, adjacent natural habitats, riparian ecosystems, wildlife corridors, and any designated and/or proposed reserve or mitigation lands (e.g., preserved lands associated with a Natural Community Conservation Plan, or other conserved lands).

   Please note that the Project area supports significant biological resources and contains habitat connections, providing for wildlife movement across the broader landscape, sustaining both transitory and permanent wildlife populations. Regional Conservation Authority (RCA) conserved lands border the project site along a portion of its length. CDFW encourages project design that avoids and preserves onsite features that contribute to habitat connectivity. The DEIR should include a discussion of both direct and indirect impacts to wildlife movement and connectivity, including maintenance of wildlife corridor/movement areas to adjacent undisturbed habitats.

3. An evaluation of impacts to adjacent open space lands from both the construction of the Project and any long-term operational and maintenance needs.

4. A cumulative effects analysis developed as described under CEQA Guidelines section 15130. Please include all potential direct and indirect project related impacts to riparian areas, wetlands, vernal pools, alluvial fan habitats, wildlife corridors or wildlife movement areas, aquatic habitats, sensitive species and other sensitive habitats, open lands, open space, and adjacent natural habitats in the cumulative effects analysis. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant

communities and wildlife habitats.

Alternatives Analysis

Note that the DEIR must describe and analyze a range of reasonable alternatives to the project that are potentially feasible, would "feasibly attain most of the basic objectives of the project," and would avoid or substantially lessen any of the project's significant effects (CEQA Guidelines § 15126.6[a]).

Mitigation Measures for Project Impacts to Biological Resources

The DEIR should include appropriate and adequate avoidance, minimization, and/or mitigation measures for all direct, indirect, and cumulative impacts that are expected to occur as a result of the construction and long-term operation and maintenance of the project. When proposing measures to avoid, minimize, or mitigate impacts, CDFW recommends consideration of the following:

1. *Sensitive Plant Communities*: CDFW considers sensitive plant communities to be imperiled habitats having both local and regional significance. Plant communities, alliances, and associations with a statewide ranking of S-1, S-2, S-3, and S-4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by querying the CNDDB and are included in *The Manual of California Vegetation* (Sawyer et al. 2009). The DEIR should include measures to fully avoid and otherwise protect sensitive plant communities from project-related direct and indirect impacts.

2. *Mitigation*: CDFW considers adverse project-related impacts to sensitive species and habitats to be significant to both local and regional ecosystems, and the DEIR should include mitigation measures for adverse project-related impacts to these resources. Mitigation measures should emphasize avoidance and reduction of project impacts. For unavoidable impacts, onsite habitat restoration and/or enhancement should be evaluated and discussed in detail.

   The DEIR should include measures to perpetually protect the targeted habitat values within mitigation areas from direct and indirect adverse impacts in order to meet mitigation objectives to offset project-induced qualitative and quantitative losses of biological values. Specific issues that should be addressed include restrictions on access, proposed land dedications, long-term monitoring and management programs, control of illegal dumping, water pollution, increased human intrusion, etc.

   If sensitive species and/or their habitat may be impacted from the Project, CDFW recommends the inclusion of specific mitigation in the DEIR. CEQA Guidelines section 15126.4, subdivision (a)(1)(8) states that formulation of feasible mitigation measures should not be deferred until some future date. The Court of Appeal in *San Joaquin Raptor Rescue Center* v. *County* of *Merced* (2007) 149 Cal.App.4th 645

struck down mitigation measures which required formulating management plans developed in consultation with State and Federal wildlife agencies after Project approval. Courts have also repeatedly not supported conclusions that impacts are mitigable when essential studies, and therefore impact assessments, are incomplete *(Sundstrom* v. *County* of *Mendocino* (1988) 202 Cal. App. 3d. 296; *Gentry* v. *City* of *Murrieta (1995)* 36 Cal. App. 4th 1359; *Endangered Habitat League, Inc.* v. *County* of *Orange* (2005) 131 Cal. App. 4th 777).

CDFW recommends that the DEIR specify mitigation that is roughly proportional to the level of impacts, in accordance with the provisions of CEQA (CEQA Guidelines, §§ 15126.4(a)(4)(B), 15064, 15065, and 16355). The mitigation should provide long-term conservation value for the suite of species and habitat being impacted by the Project. Furthermore, in order for mitigation measures to be effective, they must be specific, enforceable, and feasible actions that will improve environmental conditions.

3. *Habitat Revegetation/Restoration Plans*: Plans for restoration and revegetation should be prepared by persons with expertise in southern California ecosystems and native plant restoration techniques. Plans should identify the assumptions used to develop the proposed restoration strategy. Each plan should include, at a minimum: (a) the location of restoration sites and assessment of appropriate reference sites; (b) the plant species to be used, sources of local propagules, container sizes, and seeding rates; (c) a schematic depicting the mitigation area; (d) a local seed and cuttings and planting schedule; (e) a description of the irrigation methodology; (f) measures to control exotic vegetation on site; (g) specific success criteria; (h) a detailed monitoring program; (i) contingency measures should the success criteria not be met; and (j) identification of the party responsible for meeting the success criteria and providing for conservation of the mitigation site in perpetuity. Monitoring of restoration areas should extend across a sufficient time frame to ensure that the new habitat is established, self-sustaining, and capable of surviving drought.

   CDFW recommends that local onsite propagules from the project area and nearby vicinity be collected and used for restoration purposes. Onsite seed collection should be initiated in the near future in order to accumulate sufficient propagule material for subsequent use in future years. Onsite vegetation mapping at the alliance and/or association level should be used to develop appropriate restoration goals and local plant palettes. Reference areas should be identified to help guide restoration efforts. Specific restoration plans should be developed for various project components as appropriate.

   Restoration objectives should include protecting special habitat elements or re-creating them in areas affected by the Project; examples could include retention of woody material, logs, snags, rocks, and brush piles.

4. *Nesting Birds and Migratory Bird Treaty Act:* Please note that it is the project proponent's responsibility to comply with all applicable laws related to nesting birds and birds of prey. Fish and Game Code sections 3503, 3503.5, and 3513 afford protective measures as follows: Fish and Game Code section 3503 makes it unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by Fish and Game Code or any regulation made pursuant thereto. Fish and Game Code section 3503.5 makes it unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey) to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by Fish and Game Code or any regulation adopted pursuant thereto. Fish and Game Code section 3513 makes it unlawful to take or possess any migratory nongame bird except as provided by the rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Bird Treaty Act of 1918, as amended (16 U.S.C. § 703 et seq.).

   CDFW recommends that the DEIR include the results of avian surveys, as well as specific avoidance and minimization measures to ensure that impacts to nesting birds do not occur. Project-specific avoidance and minimization measures may include, but not be limited to: project phasing and timing, monitoring of project-related noise (where applicable), sound walls, and buffers, where appropriate. The DEIR should also include specific avoidance and minimization measures that will be implemented should a nest be located within the project site. If pre-construction surveys are proposed in the DEIR, the CDFW recommends that they be required no more than three (3) days prior to vegetation clearing or ground disturbance activities, as instances of nesting could be missed if surveys are conducted sooner.

5. *Moving out of Harm's Way:* To avoid direct mortality, CDFW recommends that the lead agency condition the DEIR to require that a CDFW-approved qualified biologist be retained to be onsite prior to and during all ground- and habitat-disturbing activities to move out of harm's way special status species or other wildlife of low or limited mobility that would otherwise be injured or killed from project-related activities. Movement of wildlife out of harm's way should be limited to only those individuals that would otherwise by injured or killed, and individuals should be moved only as far a necessary to ensure their safety (i.e., CDFW does not recommend relocation to other areas). Furthermore, it should be noted that the temporary relocation of onsite wildlife does not constitute effective mitigation for the purposes of offsetting project impacts associated with habitat loss.

California Endangered Species Act

CDFW is responsible for ensuring appropriate conservation of fish and wildlife resources including threatened, endangered, and/or candidate plant and animal species, pursuant to CESA. CDFW recommends that a CESA Incidental Take Permit (ITP) be obtained if the Project has the potential to result in "take" (California Fish and Game Code Section 86 defines "take" as "hunt, pursue, catch, capture, or kill, or

attempt to hunt, pursue, catch, capture, or kill") of State-listed CESA species, either through construction or over the life of the project; unless this Project is proposed to be a covered activity under the MSHCP. CESA ITPs are issued to conserve, protect, enhance, and restore State-listed CESA species and their habitats.

CDFW encourages early consultation, as significant modification to the proposed Project and avoidance, minimization, and mitigation measures may be necessary to obtain a CESA ITP. The California Fish and Game Code requires that CDFW comply with CEQA for issuance of a CESA ITP. CDFW therefore recommends that the DEIR addresses all Project impacts to listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of CESA.

Western Riverside County Multiple Species Habitat Conservation Plan

Within the Inland Deserts Region, CDFW issued Natural Community Conservation Plan Approval and Take Authorization for the Western Riverside County MSHCP per Section 2800, *et seq.*, of the California Fish and Game Code on June 22, 2004. The MSHCP establishes a multiple species conservation program to minimize and mitigate habitat loss and provides for the incidental take of covered species in association with activities covered under the permit.

Compliance with approved habitat plans, such as the MSHCP, is discussed in CEQA. Specifically, Section 15125(d) of the CEQA Guidelines requires that the CEQA document discuss any inconsistencies between a proposed Project and applicable general plans and regional plans, including habitat conservation plans and natural community conservation plans. An assessment of the impacts to the MSHCP as a result of this Project is necessary to address CEQA requirements. To obtain additional information regarding the MSHCP please go to: http://rctlma.org/epd/WR-MSHCP.

The proposed Project occurs within the MSHCP area and is subject to the provisions and policies of the MSHCP. In order to be considered a covered activity, Permittees must demonstrate that proposed actions are consistent with the MSHCP and its associated Implementing Agreement. Caltrans is the Lead Agency and is signatory to the Implementing Agreement of the MSHCP. The Project is proposed to occur within multiple MSHCP Criteria Cells. The MSHCP policies and procedures that apply to the proposed project include the Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools (MSHCP section 6.1.2), Protection of Narrow Endemic Plant Species (MSHCP section 6.1.3), Additional Survey Needs and Procedures for burrowing owl and Criteria Area Species (MSHCP section 6.3.2), and the Guidelines Pertaining to the Urban/Wildlands Interface (MSHCP section 6.1.4).

Regardless of whether take of threatened and/or endangered species is obtained through the MSHCP or through a CESA ITP, the DEIR needs to address how the proposed project will affect the policies and procedures of the MSHCP. Therefore, all surveys required by the MSHCP policies and procedures listed above to determine

consistency with the MSHCP should be conducted and results included in the DEIR so that CDFW can adequately assess whether the Project will impact the MSHCP.

Stephens' Kangaroo Rat Habitat Conservation Plan

The project occurs within the Stephens' kangaroo rat (*Dipodomys stephensi*) Habitat Conservation Plan (SKR HCP) fee area boundary. State and federal authorizations associated with the SKR HCP provides take authorization for Stephens' kangaroo rat within its boundaries, and the MSHCP provides take authorization for Stephens' kangaroo rat outside of the boundaries of the SKR HCP, but within the MSHCP area boundaries. The DEIR should identify if any portion of the project will occur on SKR HCP lands, or on Stephens' kangaroo rat habitat lands outside of the SKR HCP, but within the MSHCP. Note that the SKR HCP allows for encroachment into the Stephens' kangaroo rat Core Reserve for public projects, however, there are no provisions for encroachment into the Core Reserve for privately owned projects. If impacts to Stephens' kangaroo rat habitat will occur from the proposed project, the DEIR must specifically identify the total number of permanent impacts to Stephens' kangaroo rat core habitat and the appropriate mitigation to compensate for those impacts.

Lake and Streambed Alteration Program

Based on review of material submitted with the NOP and review of aerial photography, Caltrans will likely need to notify CDFW per Fish and Game Code section 1602. Fish and Game Code section 1602 requires an entity to notify CDFW prior to commencing any activity that may do one or more of the following: Substantially divert or obstruct the natural flow of any river, stream or lake; Substantially change or use any material from the bed, channel or bank of any river, stream, or lake; or Deposit debris, waste or other materials that could pass into any river, stream or lake. Please note that "any river, stream or lake" includes those that are episodic (i.e., those that are dry for periods of time) as well as those that are perennial (i.e., those that flow year-round). This includes ephemeral streams, desert washes, and watercourses with a subsurface flow. It may also apply to work undertaken within the flood plain of a body of water.

Upon receipt of a complete notification, CDFW determines if the proposed Project activities may substantially adversely affect existing fish and wildlife resources and whether a Lake and Streambed Alteration (LSA) Agreement is required. An LSA Agreement includes measures necessary to protect existing fish and wildlife resources. CDFW may suggest ways to modify your project that would eliminate or reduce harmful impacts to fish and wildlife resources.

CDFW's issuance of an LSA Agreement is a "project" subject to CEQA (see Pub. Resources Code 21065). To facilitate issuance of an LSA Agreement, if necessary, the DEIR should fully identify the potential impacts to the lake, stream, or riparian resources, and provide adequate avoidance, mitigation, and monitoring and reporting commitments. Early consultation with CDFW is recommended, since modification of the

proposed project may be required to avoid or reduce impacts to fish and wildlife resources. To obtain a Lake or Streambed Alteration notification package, please go to https://www.wildlife.ca.gov/Conservation/LSA/Forms.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDB). The CNNDB field survey form can be found at the following link: http://www.dfg.ca.gov/biogeodata/cnddb/pdfs/CNDDB_FieldSurveyForm.pdf. The completed form can be mailed electronically to CNDDB at the following email address: CNDDB@wildlife.ca.gov. The types of information reported to CNDDB can be found at the following link: http://www.dfg.ca.gov/biogeodata/cnddb/plants_and_animals.asp.

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.).

CONCLUSION

CDFW appreciates the opportunity to comment on the NOP of a DEIR for the Interstate 15 Express Lanes Southern Extension Project (SCH No. 2019100381) and recommends that Caltrans address CDFW's comments and concerns in the forthcoming DEIR. If you should have any questions pertaining to the comments provided in this letter, please contact Joanna Gibson, Senior Environmental Scientist, Specialist, at (909) 987-7449 or at Joanna.gibson@wildlife.ca.gov.

Sincerely,

Scott Wilson

RE: SCH# 2019100381, Interstate 15 Express Lanes Project Southern Extension Project, Riverside County

Dear Mr. Oriaz:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
   - **a.** A brief description of the project.
   - **b.** The lead agency contact information.
   - **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
   - **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
   - **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
   - **a.** Alternatives to the project**.**
   - **b.** Recommended mitigation measures**.**
   - **c.** Significant effects**.** (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
   - **a.** Type of environmental review necessary.
   - **b.** Significance of the tribal cultural resources.
   - **c.** Significance of the project's impacts on tribal cultural resources.
   - **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
   - **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
   - **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
    a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
    b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
    a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
    b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
    c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Mr. Brian James
Acting Section 106 Coordinator
Cultural Studies Office
Caltrans Division of Environmental Analysis
1120 N Street, MS-27
Sacramento, CA 95814

Subject: Determination of Eligibility and Finding of No Adverse Effect for the Interstate 15 (I-15) Express Lanes Project (Southern Extension) in Riverside County, California.

Dear Mr. James:

The Office of Historic Preservation (OHP) received a letter dated March 28, 2023 from the California Department of Transportation (Caltrans) for the above referenced undertaking. Caltrans is consulting with the State Historic Preservation Officer (SHPO) in accordance with the January 1, 2014 *First Amended Programmatic Agreement Among the Federal Highway Administration (FHWA), the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, as it Pertains to the Administration of the Federal-Aid Highway Program in California* (Section 106 PA). Caltrans is concurrently complying with the *Memorandum of Understanding Between the California Department of Transportation and the California State Historic Preservation Officer Regarding Compliance with Public Resources Code Section 5024 and Governor's Executive Order W-26-92, addended 2019* (5024 MOU). Pursuant to Stipulations VIII.C.6 and X.B.2.b of the Section 106 PA, Caltrans is seeking SHPO comment on a determination of eligibility and finding of no adverse effect without standard conditions. Enclosed with Caltrans' letter is a Historic Property Survey Report (HPSR) and attachments.

Caltrans District 8, in cooperation with the Riverside County Transportation Commission (RCTC), is proposing to construct new lanes along Interstate (I-) 15 between Post Mile (PM) 21.2 and PM 38.1 in Riverside County, California. The proposed lane additions and supporting infrastructure are expected to be constructed primarily within the existing state right of way (ROW). Further information regarding the undertaking and area of potential effects (APE) can be found on pages one and two of the HPSR.

Caltrans evaluated and determined that the following two built resources are ineligible according to the National Register of Historic Places (NRHP) criteria:

- Temescal Canyon Road (P-33-024785/ CA-RIV-12277; P-33-028199), unincorporated Riverside County, Corona, Lake Elsinore.
- Residence, 18740 Collier Avenue, Lake Elsinore.

Pursuant to Stipulation VIII.C.6 of the Section 106 PA, Caltrans is seeking SHPO's concurrence on the agency's determinations. **I concur** with Caltrans' determinations of ineligibility.

For the purposes of this undertaking only, Caltrans will consider the following archaeological resources eligible in accordance with Stipulation VIII.C.4 of the Section 106 PA, because they will be avoided in their entirety.

Túu'uv Traditional Cultural Property (TCP)-1	Identified by the Pechanga Band of Luiseño Mission Indians in consultation for undertaking.	Considered eligible under NRHP Criteria A, B, C and D.
Qaxáalku Payómik (TCP-2)	Identified by the Pechanga Band of Luiseño Mission Indians in consultation for undertaking.	Considered eligible under NRHP Criteria A, B, C and D.
Qaxáalku Kwíimik (TCP-3)	Identified by the Pechanga Band of Luiseño Mission Indians in consultation for undertaking.	Considered eligible under NRHP Criteria A, B, C and D.
P-33-000108/CA-RIV-108	1987 recording description: prehistoric lithics with potential subsurface deposit.	Considered eligible under NRHP Criterion D.
P-33-000630/CA-RIV-630	Prehistoric lithic site.	Considered eligible under NRHP Criterion D.
P-33-001099/CA-RIV-1099	Prehistoric seasonal or temporary habitation site.	Considered eligible under NRHP Criterion D.
P-33-002992/CA-RIV-2992	Prehistoric lithic site.	Considered eligible under NRHP Criterion D.

Caltrans has applied the Criteria of Adverse Effects pursuant to Stipulation X.A. of the Section 106 PA and has determined that the proposed undertaking will not have an adverse effect to the above listed historic properties. As described in Caltrans' Finding of Effect (an attachment to the HPSR), all ground disturbing activities will occur outside of CA-RIV-108, -630, -1099, and -2992 . The properties will be further protected from effects through the establishment of (Environmentally Sensitive Areas) ESAs and archaeological monitoring areas (AMAs). No ESAs or AMAs will be implemented at TCP-1, -2, and -3 because all affects will be avoided.

The ESAs and AMAs will be implemented and enforced through the February 2023 ESA/AMA Action Plan, and all post-review discoveries and unanticipated effects will be addressed under the February 2023 Post Review Discovery Plan (both attachment to Caltrans' Finding of Effect).

Pursuant to Stipulation X.B.2.b of the Section 106 PA, Caltrans has found that the proposed undertaking will have no adverse effect to historic properties given the above nonstandard conditions and is seeking SHPO comment on this finding. Following a review of the documentation submitted, **I do not object** to this finding. If you have any questions, please contact Associate State Archaeologist Alicia Perez at alicia.perez@parks.ca.gov.

Sincerely,

Julianne Polanco
State Historic Preservation Officer

Project Name: I-15 ELPSE

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A biological assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological

evaluation similar to a biological assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a biological assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found at the Fish and Wildlife Service's Endangered Species Consultation website at:

https://www.fws.gov/service/esa-section-7-consultation

Migratory Birds: In addition to responsibilities to protect threatened and endangered species under the Endangered Species Act (ESA), there are additional responsibilities under the Migratory Bird Treaty Act (MBTA) and the Bald and Golden Eagle Protection Act (BGEPA) to protect native birds from project-related impacts. Any activity resulting in take of migratory birds, including eagles, is prohibited unless otherwise permitted by the U.S. Fish and Wildlife Service (50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)). For more information regarding these Acts, see https://www.fws.gov/program/migratory-bird-permit/what-we-do.

It is the responsibility of the project proponent to comply with these Acts by identifying potential impacts to migratory birds and eagles within applicable NEPA documents (when there is a federal nexus) or a Bird/Eagle Conservation Plan (when there is no federal nexus). Proponents should implement conservation measures to avoid or minimize the production of project-related stressors or minimize the exposure of birds and their resources to the project-related stressors. For more information on avian stressors and recommended conservation measures, see https://www.fws.gov/library/collections/threats-birds.

In addition to MBTA and BGEPA, Executive Order 13186: *Responsibilities of Federal Agencies to Protect Migratory Birds*, obligates all Federal agencies that engage in or authorize activities that might affect migratory birds, to minimize those effects and encourage conservation measures that will improve bird populations. Executive Order 13186 provides for the protection of both migratory birds and migratory bird habitat. For information regarding the implementation of Executive Order 13186, please visit https://www.fws.gov/partner/council-conservation-migratory-birds.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Code in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

PROJECT SUMMARY

Project Code: 2023-0129289
Project Name: I-15 ELPSE
Project Type: Road/Hwy - Maintenance/Modification
Project Description: The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (Caltrans), is proposing to develop a tolled express lane network to meet existing and future travel demand, enhance mobility, and afford greater user flexibility on Interstate 15 (I‑15) in Riverside County. The primary component of the Project would be the addition of two tolled express lanes in both the northbound (NB) and southbound (SB) directions within the median of I-15 from State Route (SR-) 74 (Central Avenue) (post mile [PM] 22.3) in the city of Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley to El Cerrito Road (PM 38.1) in the city of Corona for a distance of approximately 15.8 miles. The Project would also add a SB auxiliary lane between both Main Street (PM 21.2) Off-Ramp and SR-74 (Central Avenue) On-Ramp (approximately 0.75 mile), and SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp (PM 23.9) (approximately one mile). Along with the lane additions, which extend from PM 21.2 to PM 38.1, the Project would include widening of up to 15 bridges; potential construction of noise barriers, retaining walls, and drainage systems; and implementation of electronic toll collection equipment and signs. In addition, due to the southbound express lanes access between the Cajalco Road and Weirick Road interchanges, the southbound I-15 Weirick Road off-ramp would be configured as a dual lane exit. Associated improvements, including advance signage and transition striping, would extend two miles from each end of the project limits to PM 20.3 in the south and PM 40.1 in the north. The proposed lane additions and supporting infrastructure are expected to be constructed primarily within the existing state right of way (ROW) with the majority of the improvements occurring within the existing I-15 median. The Project is intended to improve and manage traffic operations, congestion, and travel times along the corridor.

Project Location:

The approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@33.7757228,-117.48615565379983,14z

Counties: Riverside County, California

ENDANGERED SPECIES ACT SPECIES

There is a total of 24 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

MAMMALS

NAME	STATUS

Subject: Proposed DBESP for the Interstate 15 Express Lanes Project Southern Extension (ELPSE), Riverside County Transportation Commission

Dear Jeff Dietzler:

The U.S. Fish and Wildlife Service (Service) and the California Department of Fish and Wildlife (CDFW), hereafter referred to jointly as the Wildlife Agencies, have reviewed the proposed Determination of Biologically Equivalent or Superior Preservation (DBESP) for the Interstate 15 Express Lanes Project Southern Extension (Project; 0J082), which we received from the Riverside County Transportation Commission (RCTC) on April 15, 2025. The Wildlife Agencies are providing the following comments as they relate to the Project's consistency with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), in particular, with the MSHCP Policy for the Protection of Riparian/Riverine and Vernal Pool Resources (MSHCP Section 6.1.2). As discussed below under the heading, **Riparian/Riverine Mitigation Strategy,** we have concerns regarding the mitigation proposed in the DBESP.

Project Description

RCTC, in cooperation with the California Department of Transportation, is proposing to develop a tolled express lane network on Interstate 15 (I-15) in Riverside County. The I-15 Express Lanes Project Southern Extension (ELPSE) would result in the creation of two tolled express lanes within the I-15 northbound and southbound median from State Route (SR) 74 (Central Avenue) in the City of Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley to El Cerrito Road in the city of Corona, a distance of approximately 15.8 miles.

The Project would also add or modify the following features within the Project footprint:

- Creation of a southbound auxiliary lane between both the Main Street off-ramp and the SR-74 (Central Avenue) on-ramp.
- Creation of a southbound auxiliary lane between SR-74 (Central Avenue) off-ramp at the Nicholas Road on ramp.

- Widening of up to 15 bridges.
- Construction of noise barriers, retaining walls, and drainage systems.
- Installation of electronic toll collection equipment and signs.
- Reconfiguration of southbound I-15 Weirick Road off-ramp as a dual lane exit.

The Project is identified in the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) as a Planned Road and a Covered Activity (MSHCP Volume I, Section 7.3.5). Portions of the Project lie both inside and outside of Criteria Areas, in the Elsinore and Temescal Canyon Area Plan.

Riparian/Riverine Mitigation Strategy

The DBESP identifies that the Project will affect 29 riparian/riverine features (Table 2-1, Section 2.2.1), including Temescal Wash and tributaries, Arroyo del Toro, Indian Wash, Mayhew Wash, Horsethief Canyon Wash, Alberhill Creek/Gavilan Wash, Coldwater Wash, McBridge Canyon Creek, and Bedford Wash. Installation of bridge piers and bridge decks, abutments, and access routes to and from bridge areas will result in 1.53 acres of permanent impacts (including 1.46 acres of shading) and 5.59 acres of temporary impacts to MSHCP riparian/riverine resources.

The DBESP states that the Project will be constructed in phases and RCTC will offset impacts to MSHCP riparian/riverine resources as each phase is constructed and completed. RCTC will provide the Wildlife Agencies a DBESP addendum prior to each Project phase that will outline the detailed mitigation strategy. Although a set mitigation strategy is not identified yet, the DBESP proposes temporary impacts to be offset onsite, with permanent impacts addressed through the purchase of mitigation credits or permittee-responsible mitigation. A breakdown of permanent, temporary, and temporal loss impacts may be found in Tables 2-4 and 2-5 of the DBESP.

To offset 5.59 acres of temporary impacts the DBESP describes that onsite restoration will occur at a 1.25:1 or a 1:1 ratio, depending on the feature and whether temporal loss is associated with Project impacts. To ensure success of onsite restoration, RCTC will create a Habitat Mitigation and Monitoring Plan (HMMP) will provide it to the Western Riverside County Regional Conservation Authority (RCA) and the Wildlife Agencies for review and approval. The HMMP will address success criteria, contour grading, planting palette, and responsible parties. The Wildlife Agencies agree with the mitigation ratio for the temporary impacts at a 1:1 impact-to-mitigation ratio and a 1.25:1 mitigation ratio to cover the temporal loss of habitat values in the temporary impact areas will be biologically equivalent to avoidance of the affected riparian/riverine resources.

To offset 0.07 acres of permanent impacts to riparian/riverine resources, RCTC will mitigate at a 3:1 ratio for riparian resources and 2:1 ratio for riverine resources. RCTC will also mitigate at a 3:1 ratio to offset 1.46 acres of permanent shading impacts. The DBESP specifies that RCTC will find riparian/riverine mitigation that is comparable in type (i.e., in kind) to the impacted areas to ensure affected resources are replaced. We appreciate RCTC's commitment to finding in kind mitigation ahead of Project impacts and agree in principle that the specified mitigation ratios should offset project impacts. However, since the mitigation for the permanent and shading impacts will be identified and implemented in phases as the Project is built, we cannot

yet determine if the mitigation strategy would be biologically equivalent or superior to an avoidance alternative. While the DBESP commits to an addendum specifying the riparian/riverine mitigation strategy before each phase of project construction, no specifics were provided about the timing of the addendums. We request that the DBESP addendum for each construction phase be provide to the Wildlife Agencies and the RCA when the impacts are with Criteria Cells, at least 120 days prior to ground disturbance for each respective phase.

Conclusion

We appreciate your thorough and thoughtful approach to mitigating riparian/riverine impacts for this project and are available to discuss mitigation options or opportunities if that would be beneficial. However, as mitigation needs to be identified and implemented prior to ground disturbing activities associated with each Project phase, please concur with our 120-day request or provide confirmation of a different timeframe sufficiently in advance of Project construction to ensure mitigation is addressed prior to construction.

We appreciate the opportunity to review and provide comments on this DBESP and look forward to continued coordination on this Project. If you have any questions or comments regarding this letter, please contact John M. Taylor[1] of the Service or Breanna Machuca[2] of CDFW.

Sincerely,

KARIN CLEARY-ROSE

Subject: RE: [EXTERNAL] I-15 Express Lanes Project Southern Extension (ELPSE; 0J082) - DBESP Wildlife Agency comments

John,

RCTC acknowledges and concurs with the 120-day DBESP addendum review and approval period prior to any ground disturbance for each respective phase. We will incorporate this requirement into our project specifications for our design-build contractor to implement through the design and construction phases of the project.

March 19, 2024

Anne Mayer
Executive Director
Riverside County Transportation Commission (RCTC)
4080 Lemon Street, 3rd Floor
Riverside, CA 92501

SUBJECT: LETTER OF SUPPORT FOR RCTC's INTERSTATE 15 (I-15) EXPRESS LANES PROJECT SOUTHERN EXTENSION

Dear Ms. Anne Mayer,

The Riverside Transit Agency (RTA) strongly supports RCTC's I-15 Express Lanes Project Southern Extension (Project). The Project extends the existing I-15 Express Lanes an additional 14.5 miles from Cajalco Road in Corona to State Route 74 (Central Avenue) in Lake Elsinore, adding tolled express lanes in both directions and two auxiliary lanes at the south end of the project. Riverside County is the 10th largest in the nation by population and is rapidly growing due to the region's relative housing affordability and economic opportunities. The Project helps address competing passenger and commercial traffic congestion on I-15, bolstering mobility choices and supporting continued economic development. Once built, the Project will provide the following benefits:

- **Improve traffic operations and increase travel time reliability** – Providing new express lanes will enhance the flow of traffic and reduce congestion on I-15, particularly at Cajalco Road where the existing I-15 Express Lanes ends.
- **Expand travel choice** – Encouraging carpooling and use of express bus service, reducing the number of vehicles on the road and improving local air quality.
- **Promote safety** – Enabling additional passenger vehicles to travel in dedicated and protected lanes separated from trucks, which rely upon the I-15 corridor to deliver goods from the ports.

As the primary public transit provider in western Riverside County, RTA is responsible for coordinating transit services throughout the approximate 2,500 square mile service area, providing both local and regional services with 32 local fixed routes, three CommuterLink express routes, GoMicro microtransit, and Dial-A-Ride services. RTA's CommuterLink Route 206 travels along the I-15 project area and will benefit from these improvements. Once the Project is completed, RTA buses will be able to utilize the Express Lanes, bypassing growing congestion along the corridor. Any improvements made to improve travel time and mitigate traffic delays will improve on time performance and help increase transit ridership. This project will provide numerous benefits to the region including reduced congestion and sustainable growth for Riverside County.

RTA strongly supports RCTC's I-15 Express Lanes Project Southern Extension. If you need additional information or have questions for RTA regarding its support of this project, please contact Jennifer Nguyen, Director of Planning, at jnguyen@riversidetransit.com or at (951) 565-5132.

Sincerely,

Subject: Streamlined Biological Opinion for the Interstate 15 Express Lanes Project Southern Extension, Riverside County, California

Dear Craig Wentworth,

This document transmits the U.S. Fish and Wildlife Service's (Service) biological opinion on the proposed Interstate 15 (I-15) Auxiliary Lanes Express Lanes Project Southern Extension (Project; 0J082) and its potential effects on the federally endangered least Bell's vireo (*Vireo bellii pusillus*), Quino checkerspot butterfly (*Euphydryas editha quino*), arroyo toad (*Anaxyrus californicus* [*Bufo microscaphus c*.]), San Bernardino kangaroo rat (*Dipodomys merriami parvus*), and the federally threatened coastal California gnatcatcher (*Polioptila californica californica*), and Stephens' kangaroo rat (*Dipodomys stephensi*) in accordance with section 7 of the Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 *et seq*.). We received your request for consultation August 8, 2025. The Project is receiving Federal funding through the Federal Highway Administration (FHWA). The California Department of Transportation (Caltrans) has assumed FHWA's National Environmental Policy Act (NEPA) and section 7 consultation responsibilities in accordance with 23 U.S.C. 326, and under authorities identified in the signed NEPA assignment Memorandum of Understanding between FHWA and Caltrans (effective April 18, 2022). We received supporting material to initiate consultation August 13, 2025. The Riverside County Transportation Commission (RCTC) is the local applicant for the Project.

BIOLOGICAL OPINION

DESCRIPTION OF THE PROPOSED ACTION

The Project is the development of a tolled express lane network on I-15 consisting of two tolled express lanes within the I-15 northbound and southbound medians from State Route (SR) 74

(Central Avenue) in the City of Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley to El Cerrito Road in the city of Corona, a distance of approximately 15.8 miles.

The Project footprint also includes the addition or modification of the following features along the Project alignment:

- Creation of a southbound auxiliary lane between both the Main Street off-ramp and the SR-74 (Central Avenue) on-ramp.
- Creation of a southbound auxiliary lane between SR-74 (Central Avenue) off-ramp at the Nicholas Road on ramp.
- Widening of up to 15 bridges.
- Construction of noise barriers, retaining walls, and drainage systems.
- Installation of electronic toll collection equipment and signs.
- Reconfiguration of southbound I-15 Weirick Road off-ramp as a dual lane exit.

The Project is identified in the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP) as a Planned Road and a Covered Activity (MSHCP Volume I, Section 7.3.5). Portions of the Project lie both inside and outside of Criteria Areas, in the Elsinore and Temescal Canyon Area Plans.

On June 22, 2004, the Service issued a section 10(a)(1)(B) permit for the Western Riverside Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP established a multiple species conservation program to minimize and mitigate habitat loss and the incidental take of covered species, including least Bell's vireo, Quino checkerspot butterfly, arroyo toad, San Bernardino kangaroo rat, coastal California gnatcatcher, and Stephens' kangaroo rat, in association with activities covered under the permit. The proposed Project is located within the MSHCP plan area boundary and RCTC is a permittee under the MSHCP. For Caltrans, in its role as FHWA, to receive incidental take authorization based on the Project's inclusion in the MSHCP the proposed action (Project) must be consistent with the MSHCP and its associated implementation agreement and permit. As a permittee under the MSHCP, RCTC received incidental take authorization for impacts to federal trust resources through their section 10(a)(1)(B) permit for the plan.

The proposed Project is also located within the plan area boundary of the *Habitat Conservation Plan for the Stephens' Kangaroo Rat in Western Riverside County, California* (SKR HCP). Although the MSHCP covers SKR, within the SKR HCP plan area, take of SKR is addressed under the SKR HCP. Neither Caltrans nor RCTC are permittees under the SKR HCP. In order to rely on the analysis of the incidental take coverage provided the SKR HCP, the proposed action must be consistent with the SKR HCP and its associated implementation agreement and permit.

This biological opinion is based on information provided in the following documents: (1) *Intra-Service Formal Section 7 Consultation/Conference for Issuance of Endangered Species Act Section 10(a)(1)(B) Permit TE-088609-0 for the Western Riverside County Multiple Species Habitat Conservation Plan*, dated June 22, 2004 (FWS-WRIV-870.19); (2) *Interstate 15 Express*

Impacts to Federally Listed Species

Direct and indirect effects to federally listed species are expected from Project activities. Although not inclusive, Project impacts include (1) vegetation removal, (2) soil compaction, grading and contouring, installation of impermeable features, (3) introduction of invasive plant species, (4) erosion and sedimentation, (5) introduction of hazardous materials, (6) introduction of trash into adjacent undisturbed habitat, (7) generation of noise above baseline levels during Project activities, and (8) light intrusion into adjacent habitat during Project activities. Effects to least Bell's vireo, Quino checkerspot butterfly, arroyo toad, coastal California gnatcatcher, Stephens' kangaroo rat, and San Bernardino kangaroo rat are discussed more fully below in the context of the MSHCP, with avoidance and minimization measures identified in Appendix L of the NES and Appendix D of the January 2025 DBESP, as amended to be utilized for the duration of Project activities.

MSHCP CONSISTENCY

As an MSHCP Covered Activity, the Project is subject to Sections 6.1.2, 6.1.3, 6.1.4, 7.5.1, and 7.5.3 of the MSHCP.

Section 6.1.2 Riparian/Riverine

The Project DBESP identifies that the Project will affect 29 riparian/riverine features (Table 2-1, Section 2.2.1), including Temescal Wash and eight tributaries, (Arroyo del Toro, Indian Wash, Mayhew Wash, Horsethief Canyon Wash, Alberhill Creek/Gavilan Wash, Coldwater Wash, McBridge Canyon Creek, and Bedford Wash). Installation of bridge piers and bridge decks, abutments, and access routes to and from bridge areas will result in 1.53 acres of permanent impacts (including 1.46 acres of shading) and 5.59 acres of temporary impacts to MSHCP riparian/riverine resources.

Least Bell's vireo

Least Bell's vireo protocol surveys were conducted between April 15 and July 31, 2020, and 2021 within a 500-foot buffer of the Project disturbance footprint (Biological Study Area (BSA)). Both the 2020 and 2021 surveys identified 11 least Bell's vireo territories within the BSA, but none within the Project footprint subject to disturbance.

Project-related impacts include removal of vegetation to support equipment access, slope contouring, and facility improvements that will increase the amount of shading in areas that would otherwise support vegetation. Project related activities would result in effects to 2.95 acres of suitable but unoccupied least Bell's vireo habitat. Of the 2.95 acres, there are 0.19 acre of permanent impacts due to shading and 2.76 acres of temporary impacts from vegetation removal No permanent impacts to occupied least Bell's vireo territories or suitable habitat are anticipated.

Quino checkerspot butterfly

Section 4.4.1 of the NES states that approximately 1,068 acres of potentially suitable Quino checkerspot butterfly habitat was identified in the BSA (NES 2023). Although protocol surveys were not performed to determine whether Quino checkerspot butterfly was present or absent, Caltrans has assumed the species may be affected due to the presence of suitable habitat. Project-related actions will result in approximately 13.84 acres of permanent impacts, 226.46 acres of temporary impacts, and 0.29 acre of shading impacts on potentially suitable Quino checkerspot butterfly habitat. Should Quino checkerspot butterfly be present within the Project footprint, utilization of measures BIO-2 thorough BIO 11, as identified in Appendix L of the NES and Appendix D of the January 2025 DBESP, will minimize impact to the individuals.

Arroyo toad

The NES states that approximately 166.43 acres of potentially suitable arroyo toad habitat were identified within the BSA, including Coast Live Oak Woodland and Forest, Arrow Weed Thickets, Fremont Cottonwood Forest and Woodland, Goodding's Willow–Red Willow Riparian Woodland, Hardstem and California Bulrush Marshes, California Sycamore Woodland, Scale Broom Scrub, and Mulefat Thickets. Adjacent upland areas within 0.75 miles of these vegetation types would also be suitable for use by this species during estivation. The Project alignment is outside of the MSHCP arroyo toad survey area and protocol surveys for the species were not

performed. Caltrans has however, assumed the species is present based on suitable habitat identified within the Project footprint.

Of the potentially suitable arroyo toad habitat identified, Project-related actions, including vegetation removal, grading of soil, would result in 2.65 acres of temporary impacts and 0.22 acres of shading impacts from removal of vegetation, temporary grading, and widening of the facility. No permanent impacts to potentially suitable arroyo toad habitat are anticipated.

Coastal California gnatcatcher

The NES states that 644.46 acres of gnatcatcher habitat (Riversidean sage scrub) were identified within the BSA. Protocol surveys for the species were not performed; however, Caltrans has assumed the species is present based on the presence of suitable habitat within the Project footprint. Project-related impacts include removal of vegetation to support equipment access, slope contouring, and facility improvements that will increase the amount of shading that would otherwise support vegetation. Of the suitable habitat identified, 132.55 acres of suitable coastal California gnatcatcher habitat would be affected by Project-related actions. This includes 3.33 acres of permanent impacts. 0.07 acres of permanent shading impacts, and 129.15 acres of temporary impacts. As Project-related activities have the potential to directly and indirectly affect the species, Caltrans will ensure RCTC implements measures BIO-2 though BIO-11, BIO-18, BIO-24, and BIO-28 to minimize impacts to the species.

Stephens' kangaroo rat

Initial habitat evaluations identified 1,027.85 acres grassland, agricultural areas and Riversidean sage scrub with potential to support the Stephens' kangaroo rat. Protocol surveys for the species were not performed; however, Caltrans has assumed the species is present based on suitable habitat identified within the Project footprint.

Of the suitable habitat identified, approximately 240.11 acres will be subject to direct impacts from Project-related actions. This includes 13.84 acres of permanent impacts, 225.80 acres of temporary impacts, and 0.47 acre of shading impacts. Should the species be present within the limits of Project disturbance, Caltrans will ensure RCTC implements measures BIO-2 though BIO-12, BIO-18, BIO-20, and BIO-24 to minimize impacts to the species.

San Bernardino kangaroo rat

Although the Project footprint is outside the known distribution of the species, the NES states that approximately 875.06 acres of various vegetation communities within the BSA may support suitable San Bernardino kangaroo rat habitat. The Project alignment is outside of both the MSHCP SBKR survey area and SBKR known distribution. Surveys for the species were not performed; however, Caltrans has assumed the species is present based on suitable habitat identified within the Project footprint.

Of the suitable habitat identified, approximately 204.60 acres will be subject to direct impacts from Project-related actions. This includes 13.67 acres of permanent impacts, 190.46 acres of

temporary impacts, and 0.47 acre of shading impacts. Should the species be present within the limits of Project disturbance, Caltrans will ensure RCTC implements measures BIO-2 though BIO-12, BIO-18, BIO-20, and BIO-24 to minimize impacts to the species.

MSHCP Mitigation

To address impacts to Riparian/Riverine resources, Caltrans will offset permanent impacts at a 3:1 ratio and temporary impacts at a 1:1 ratio. The compensatory mitigation for permanent impacts will be offset through an approved mitigation bank, permittee responsible mitigation, or via land acquisition. For any of the aforementioned options, Caltrans will (1) coordinate with the Service and the Department on which mitigation option is optimal/available based on the Project's timeline, and (2) ensure mitigation is addressed prior to Project ground disturbance.

Temporary impacts will be offset through onsite restoration and enhancement. Onsite mitigation will include decompaction of soil, revegetation of disturbed areas to match native species composition in adjacent undisturbed habitat, and removal of non-native exotic vegetation.

Section 6.1.3 (Narrow Endemic Plant Species Survey Areas and Criteria Area Species Survey Area)

This Project site is within a Narrow Endemic Plant Species Survey Area (NEPSSA) 1 and 7, or Criteria Area Species Survey Area (CASSA) 1.

In NEPSSA 1 and 7, botanical surveys were conducted from April to June 2020, and April to July 2021. Although potentially suitable habitat for species covered under specific survey areas, no species were observed. In CASSA 1, botanical surveys were performed concurrently with those for the NEPSSA survey groups. As with results from NEPSSA 1 and 7, although suitable habitat was determined to be present where the Project disturbance footprint overlapped CASSA 1, no focus species were observed.

Section 6.1.4 (Guidelines pertaining to Urban/Wildlands Interface)

Per MSHCP Section 6.1.4, with the presence of current and future conservation areas within or near the Project area, Caltrans has incorporated avoidance and minimization measures to control\ adverse effects related to Project implementation. These measures include: (1) controlling the quantity and quality of surface runoff from the facility; (2) precluding the use of any chemicals toxic to wildlife, habitat, or water sources; (3) shielding and limiting Project lighting by directing light downward, and only into the active Project footprint; and (4) avoiding the use of non-native species, as presented in Table 6-2 of the MSHCP, for erosion control. Please see the Project’s DBESP and NES for additional details.

Section 7.5.1 (Guidelines for the Siting and Design of Planned Roads Within the Criteria Area and Public/Quasi-Public Lands)

As designed, the Project demonstrates consistency with the biological goals and objectives as set forth in Section 7.5.1 of the MSHCP. Section 7.5 of the MSHCP addresses the Guidelines for

Facilities within the Criteria Area and Public/Quasi Public (PQP) Lands. The proposed Project has or will implement the conditions set forth in Section 7.5.1 through the design process or will through the implementation process.

Section 7.5.3 (Construction Guidelines)

Caltrans will ensure best management practices as identified in Section 7.5.3 of the MSHCP will be implemented for the duration of Project related activities.

Stephens' Kangaroo Rat Habitat Conservation Plan Consistency

As indicated in the Stephens' kangaroo rat section above, the Project will directly affect approximately 240.11 acres of suitable and/or potentially suitable habitat for the species. This estimate includes all potentially suitable habitat within the Project impact area regardless of the vegetation quality. No surveys were conducted, and Stephens' kangaroo rat is assumed to be present in the Project's impact area. To avoid and minimize impacts to Stephens' kangaroo rat and its associated habitat, Caltrans will ensure RCTC will implement the minimization measures identified in the Appendix L of the NES.

The SKR HCP is implemented by the Riverside County Habitat Conservation Agency on behalf of the County of Riverside and eight member cities. To establish a regional mechanism to fund implementation of the SKR HCP, Riverside County Ordinance No. 663.10 was adopted, which requires the payment of a fee for projects that are inside the SKR HCP fee area but outside of the core reserve system. This funding has been used, in part, to establish and manage a core reserve system designed to maintain the long-term survival of Stephens' kangaroo rat in western Riverside County. The proposed project is within the SKR HCP fee area, but outside of the core reserves. , and therefore would qualify to obtain take coverage through payment of fees. However, public works projects, such as roads, are exempt from fee payment. Therefore, we have determined that the proposed project is consistent with the SKR HCP and its associated implementing agreement and permit.

The status of the Stephens' kangaroo rat and the effects of implementing the SKR HCP were previously addressed in our intra-Service biological opinion dated May 2, 1996. In the biological opinion for the SKR HCP, we concluded that the level of anticipated take in the SKR HCP plan area was not likely to result in jeopardy to the Stephens' kangaroo rat. Given that the proposed action is consistent with the SKR HCP, we do not anticipate any adverse effects to the Stephens' kangaroo rat that were not evaluated in the intra-Service biological opinion for the SKR HCP. No incidental take of SKR beyond that anticipated in the biological opinion for the SKR HCP will occur. Therefore, it is our conclusion that implementation of the proposed Project will not result in jeopardy to the Stephens' kangaroo rat.

CONCLUSION BASED ON CONSISTENCY WITH THE MSHCP

Based on our review of the information provided to us, we have determined the proposed Project is consistent with relevant MSHCP policies and procedures. The status of the least Bell's vireo, Quino checkerspot butterfly, arroyo toad, coastal California gnatcatcher, Stephens' kangaroo rat,

and San Bernardino kangaroo rat and the effects of implementing the MSHCP were previously addressed in our intra-Service biological opinion dated June 22, 2004, where we concluded that the level of anticipated take in the MSHCP Plan Area was not likely to result in jeopardy to species identified in this consultation. Therefore, it is our conclusion that implementation of the proposed Project will not result in jeopardy to any of these species.

Additionally, we do not anticipate any adverse effects to least Bell's vireo, Quino checkerspot butterfly, arroyo toad, coastal California gnatcatcher, Stephens' kangaroo rat, and San Bernardino kangaroo rat that were not evaluated in the respective intra-Service biological opinions for the incidental take authorization associated with the MSHCP and the SKR HCP. We therefore convey the incidental take provided in the Intra-Service Formal Section 7 Consultation/Conference for Issuance of Endangered Species Act Section 10(a)(1)(B) Permit TE-088609-0 for the Western Riverside County Multiple Species Habitat Conservation Plan and the Intra-Service Section 7 Consultation on Fish and Wildlife Service Issuance of an Incidental Take Permit for the Long-term Stephens' kangaroo rat Habitat Conservation Plan to Caltrans in its role as FHWA.

This concludes formal consultation on the proposed action. As provided in 50 CFR §402.16, reinitiation of formal consultation is required where discretionary Federal agency involvement or control over the action has been retained (or is authorized by law) and if: (1) the amount or extent of incidental take is exceeded; (2) new information reveals effects of the proposed action that may affect listed species or critical habitat in a manner or to an extent not considered in this opinion; (3) the agency action is subsequently modified in a manner that causes an effect to listed species or critical habitat that was not considered in this opinion; or (4) a new species is listed or critical habitat is designated that may be affected by the proposed action. In instances where the amount or extent of incidental take is exceeded, any operations causing such take must cease pending reinitiation.

Should you have any questions regarding the species listed or your responsibilities under the Act, please contact John M. Taylor[1] of my office.

Sincerely,

KARIN CLEARY-ROSE

Chapter 5 List of Preparers

The following persons were principally responsible for preparation of this Draft Environmental Impact Report/Environmental Assessment (EIR/EA) and supporting technical studies.

5.1 California Department of Transportation, District 8

Anderson, Almabeth, Senior Landscape Architect, Landscape Architecture, District 8 Division of Design, California Department of Transportation.

Cheng, Donald, Transportation Engineer, Environmental Engineering Unit "B," District 8 Division of Environmental Planning, California Department of Transportation.

Ciacchella, Daniel, PE, Project Manager, District 8, California Department of Transportation.

Clarendon, Shannon, Associate Environmental Planner - Archaeologist, Cultural Studies Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Combs, JaShawn, Environmental Scientist, Cultural Studies Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Compton, Adam, Senior Environmental Scientist, Branch Chief, Environmental Regulatory Permits Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Curran, Timothy, Landscape Associate, Landscape Architecture. District 8 Division of Design, California Department of Transportation.

Duff, Gabrielle, Senior Environmental Scientist (Supervisor), Branch Chief, Cultural Studies Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Elgeziry, Maggi, MS, Environmental Scientist, Biological Studies & Surveys Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Hamlett, Maria, Associate Environmental Planner (Biologist), Environmental Regulatory Permits Unit, District 8 Division of Environmental Planning, California Department of Transportation.

Ho, Vivian, Associate Environmental Planner, Environmental Studies Unit "C," District 8 Division of Environmental Planning, California Department of Transportation.

Islam, Fatima, Transportation Engineer (Civil), Environmental Engineering Unit “B,” District 8 Division of Environmental Planning, California Department of Transportation.

Karimi, Bahram, Associate Environmental Planner (Paleontologist), Environmental Studies Unit “C,” District 8 Division of Environmental Planning, California Department of Transportation.

Lee, Amy, Environmental Scientist, Environmental Studies Unit “D,” District 8 Division of Environmental Planning, California Department of Transportation.

Nakano, Alan, Landscape Associate, Storm Water Quality Unit, District 8 Division of Design, California Department of Transportation.

Niu, Justine, PE, Senior Transportation Engineer (Civil), District 8 Division of Design, California Department of Transportation.

Odufalu, Olufemi, PE, Senior Transportation Engineer, Branch Chief, Environmental Engineering Unit “B,” District 8 Division of Environmental Planning, California Department of Transportation.

Oriaz, Shawn, Senior Environmental Planner, Branch Chief, Environmental Studies Unit “C,” District 8 Division of Environmental Planning, California Department of Transportation.

Pachol, Andrew, Transportation Engineer (Civil), District 8 Division of Design, California Department of Transportation.

Shankel, James, Supervising Environmental Planner, Office Chief (Acting), District 8 Division of Environmental Planning, California Department of Transportation.

To, Daniel, PE, Transportation Engineer, Environmental Engineering Unit “B,” District 8 Division of Environmental Planning, California Department of Transportation.

Tokhmafshan, Gita, Senior Environmental Planner (Specialist), District 8 Division of Environmental Planning, California Department of Transportation.

Toledo, Antonia, Deputy District Director, District 8 Division of Environmental Planning, California Department of Transportation.

Walton, Natasha, MS, Environmental Scientist, Project Environmental Generalist, Environmental Studies Unit “C,” District 8 Division of Environmental Planning, California Department of Transportation.

Wang, Chun-Sheng, Senior Environmental Scientist (Supervisor), Branch Chief, Biological Studies & Surveys Unit, District 8 Division of Environmental Planning, California Department of Transportation.

5.2 Riverside County Transportation Commission

Dietzler, Jeff, Capital Projects Manager. B.S. in Electrical Engineering, University of California, Riverside; B.A. in Mathematics, University of California, Riverside. 17 years of experience in road/highway design and project management. Contribution: RCTC project manager.

Quintero, Gustavo, Project Coordinator. B.S. in Geology, Sonoma State University. 34 years of experience in environmental science. Contribution: Bechtel/RCTC project coordinator.

5.3 ICF

Byram, Saadia, Editor and Publications Specialist. 30 years of editing and formatting experience; 15 years in environmental documentation. Contribution: EIR/EA and technical report formatting, editing, and publication.

Calvert, Brian, Vice President, Environmental Planning. B.A. in Geography and Regional Science, The George Washington University, Washington; MEP (Master of Environmental Planning), Arizona State University. 29 years of experience in environmental planning and project management. Contribution: Project director for environmental.

Corpuz, Monica, Managing Director, Environmental Planning. B.A. in Anthropology, University of California, Berkeley; M.A. in Public Archaeology, California State University, Northridge. 20 years of experience as an archaeologist and over 11 as environmental project manager. Contribution: Project management, quality control and quality assurance (QA/QC) review of the EIR/EA and environmental technical studies, and author of Section 4(f).

Czaban, Emily, Principal Environmental Planner. B.A., Urban Studies, Loyola Marymount University; Master of Urban and Regional Planning, California State Polytechnic University, Pomona. 11 years of experience in environmental planning and over 6 years as a CEQA/NEPA project manager. Contribution: EIR/EA Chapter 1, Standard Project Measures; Section 2.2.2.3, Parks and Recreational Resources; and Environmental Commitments Record.

Dayman, Shelly, Senior Biologist. B.S. in Ecology, University of Calgary. 25 years of experience as a biologist. Contribution: Author of EIR/EA biological sections and the Natural Environment Study.

Franklin, Nina, Environmental Planner. B.S. in Geography, Arizona State University; MURP (Master of Urban and Regional Planning), University of California, Irvine. Over 2 years of experience as an environmental planner. Contribution: QA/QC and author of various generalist sections of the EIR/EA.

Garcia, Johnnie, GIS Analyst. B.A. in Geography. University of California, Santa Barbara. 18 years of experience as a GIS Analyst. Contribution: GIS lead.

Hardie, Peter. Senior Acoustics Specialist. M.E.S.M., Environmental Science and Management, University of California Santa Barbara. Member, Institute of Noise Control Engineering (INCE-USA). 19 years of experience as an acoustical specialist. Contribution: Senior QA/QC for the Noise Study Report and author of the EIR/EA noise section.

Higginson, Jonathan. Senior Acoustics Specialist. B.Eng., Acoustical Engineering, University of Southampton, Institute of Sound and Vibration Research. Member, Institute of Noise Control Engineering (INCE-USA). 22 years of experience as an acoustical specialist. Contribution: Technical lead for the Noise Study Report and senior technical review of the EIR/EA noise section.

Irvin, Elizabeth, Editor and Publications Specialist. B.A., English, University of California, Irvine. 26 years of experience in editing and formatting environmental documentation. Contribution: EIR/EA and technical report formatting, editing, and publication.

Lay, Keith, Managing Director, Air Quality and Climate Change. B.S., Civil Engineering, University of Manitoba, Winnipeg, Canada. 23 years of experience as an air quality and climate change specialist. Contribution: Author of air quality, climate change, and energy sections of the EIR/EA and the Air Quality Report.

Roderick, Margaret, Senior Architectural Historian, Cultural Resources. B.A., Art History and Criticism, University of Southern California; M.H.C. (Master of Heritage Conservation), University of Southern California; M.A., Art History, Florida State University. 7 years of experience as an architectural historian, 4 years of experience as a Caltrans Principal Architectural Historian (consultant equivalent). Contribution: cultural task lead and Principal Architectural Historian (consultant equivalent) – authorship and QA/QC of cultural resources documents – Historic Property Survey Report and Historical Resources Evaluation Report.

Rzeszutko, Jakob, Acoustics Specialist. B.S., Acoustics, Columbia College Chicago. Member, Institute of Noise Control Engineering (INCE-USA). 5 years of experience as an acoustical specialist. Contribution: Primary traffic noise modeler and author of the Noise Study Report.

Vargas, Benjamin, Registered Professional Archaeologist. B.A., Anthropology, California State University, Fullerton; M.A., Anthropology, California State University, Long Beach. Over 35 years of experience in archaeology. Consultant equivalent PQS standards for Principal Investigator, Prehistoric and Historical Archaeology, as defined in the Caltrans Section 106 PA. Contribution: Archaeological Principal Investigator – authorship and QA/QC of cultural resources documents – Archaeological Survey Report, Historic Property Survey Report, Finding of Effect.

Vu, Uyenlan, Principal Environmental and Transportation Planner. B.A., Environmental Analysis & Design/Social Ecology, University of California, Irvine; M.S., Urban and Regional Planning and M.S., Water Resources Management, University of Wisconsin-Madison. 19 years of environmental planning experience. Contribution: QA/QC reviewer of the EIR/EA and author of the Initial Site Assessment and Water Quality Assessment Report.

5.4 HDR

Belcourt, Andrew, Senior Environmental Project Manager. B.A., Anthropology and Archaeology, University of Saskatchewan; M.P.S (in progress), Geodesign, Pennsylvania State University. 28 years of experience as an archaeologist, 12 years as a GIS Analyst, and 7 years as an environmental planner. Contribution: Environmental management, QAQC of the Visual Impact Assessment and Community Impact Assessment.

Hager, Mark, PE, Project Manager. B.S., Civil Engineering, California State Polytechnic University, Pomona. 24 years of experience as civil engineer and project manager. Contribution: Project management for Project Approval and Environmental Document (PA&ED) Phase.

Slater, Jessica, PE, Deputy Project Manager. B.S., Civil Engineering, California Polytechnic State University, San Luis Obispo. 11 years of experience as a civil engineer. Contribution: Roadway lead engineer for PA&ED Phase.

Smith, Brian, PE, Project Manager. B.S., Civil Engineering, California State Polytechnic University, Pomona. 24 years of experience as civil engineer. Contribution: Engineering manager for PA&ED Phase.

Swenson, Merin, Senior Environmental Planner. B.S., Environmental Science, University of Utah. 15 years of experience as environmental planner and 5 years as environmental project manager. Contribution: Author of Community Impact Assessment and Visual Impact Assessment and QAQC review of EIR/EA sections.

5.5 FEHR Peers

Pack, Jason D., P.E., Principal. B.S., Civil Engineering, University of California, Davis. Traffic Engineer in the State of California (TE 2402). 25 years of experience in travel demand forecasting, traffic operations, and CEQA assessment (including approximately 25 projects on the state highway system). Contribution: Traffic Volumes Report, Traffic Operations Assessment Report, and other traffic-related assistance.

Tamayo, Mae, Senior. Engineer. B.S., Civil Engineering, University of California, Davis. 4 years of experience with travel demand forecasting and traffic operations assessment. Contribution: Travel demand forecasting, Traffic Volumes Report, and Traffic Operations Assessment Report.

Zhou, Diwu, P.E., Associate. B.S., Civil Engineering, University of Texas at Austin; M.S., Transportation Engineering, University of California, Berkeley. Civil Engineer in the State of California (CE 89029). California Roadway Safety Professional (RSP 635). 8 years of experience in traffic operations and CEQA assessment. Contribution: Operations Assessment, the Traffic Operations Assessment Report, and other traffic-related assistance.

A.1 Introduction

The Riverside County Transportation Commission (RCTC), in cooperation with the California Department of Transportation (Caltrans), District 8, is proposing to construct new lanes along Interstate (I-) 15 between post mile (PM) 21.2 and PM 38.1 in Riverside County, California. The primary component of the I-15 Express Lanes Project Southern Extension (Project) would be the addition of two tolled express lanes in both the northbound and southbound directions within the median of Interstate I-15 from State Route (SR) 74 (Central Avenue) (PM 22.3) in the city of Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley, to El Cerrito Road (PM 38.1) in the city of Corona, a distance of approximately 15.8 miles.

A.1.1 Section 4(f)

A.1.1.1 Section 4(f) of the Department of Transportation Act

Section 4(f) of the Department of Transportation Act of 1966, codified in federal law at 49 United States Code (USC) 303, declares that "it is the policy of the United States Government that special effort should be made to preserve the natural beauty of the countryside and public park and recreational lands, wildlife and waterfowl refuges, and historic sites."

Section 4(f) specifies that the Secretary of Transportation may approve a transportation program or project… "requiring the use of publicly owned land of a public park, recreational area, or wildlife and waterfowl refuge of national, state, or local significance, or land of an historic site of national, state, or local significance (as determined by the federal, State, or local officials having jurisdiction over the park, refuge, or site) only if:

- There is no prudent and feasible alternative to using that land; and
- The program or project includes all possible planning to minimize harm to the park, recreational area, wildlife and waterfowl refuge, or historic site resulting from the use."

Section 4(f) further requires coordination with the Department of the Interior and, as appropriate, the involved offices of the Department of Agriculture and the Department of Housing and Urban Development in developing transportation projects and programs that use lands protected by Section 4(f). If historic sites are involved, then coordination with the State Historic Preservation Officer is also needed.

Responsibility for compliance with Section 4(f) has been assigned to Caltrans pursuant to 23 USC 326 and 327, including determinations and approval of Section 4(f) evaluations, as well as coordination with those agencies that have jurisdiction over a Section 4(f) resource that may be affected by a project action.

The Project is a transportation project that may receive federal funding and/or discretionary approvals through the U.S. Department of Transportation (i.e., Federal Highway Administration [FHWA]); therefore, documentation of compliance with Section 4(f) is required.

This Section 4(f) analysis provides documentation of compliance with Section 4(f) through an analysis of effects and a determination regarding use of public parks, recreational facilities, wildlife refuges, and historic properties as a result of the Project, along with the identification and evaluation of avoidance alternatives and measures to minimize harm, as applicable, in accordance with the requirements of Section 4(f).

To determine whether Section 4(f) applies to a federal transportation project, two prerequisites are considered: (1) the project must involve a resource that is protected under the provisions of Section 4(f) and (2) there must be a use of that resource. Resources subject to Section 4(f) consideration include publicly owned lands that are part of a public park or recreational areas of national, state, or local significance, whether publicly or privately owned.

A.1.1.2 Use of 4(f) Resources

As defined in 23 Code of Federal Regulations (CFR) 774.17, a “use” of a protected resource occurs when any of the following conditions are met:

- **Permanent Use:** Land is permanently incorporated into a transportation facility.
- **Temporary Use:** There is a temporary occupancy of land that is adverse in terms of the statute’s preservation purpose, as determined by the criteria in 23 CFR 774.13(d).
- **Constructive Use:** There is a constructive use of a Section 4(f) property, as determined by the criteria in 23 CFR 774.15.

Temporary Occupancy without Use

If the five conditions set forth in 23 CFR Section 774.13(d) can be satisfied, Section 4(f) does not apply.

1. The duration of the occupancy must be temporary (i.e., shorter than the period of construction) and not involve a change in ownership of the property.
2. The scope of the work must be minor, with only minimal changes to the protected resource.
3. There are no anticipated permanent adverse physical impacts on the protected resource and no temporary or permanent interference with the activities or purpose of the resource.
4. The land being used must be fully restored to a condition that at least equals the condition that existed prior to the project.

There must be documented agreement by the appropriate officials having jurisdiction over the Section 4(f) resource regarding the above conditions.

Section 4(f) and Planned and Programmed Projects

For planned and programmed projects, according to the Section 4(f) Policy Paper (FHWA 2012), for a project to be considered a Section 4(f) property, the public agency that owns the property must have formally designated the property and determined it to

be significant for park, recreational, or wildlife and waterfowl refuge purposes. Evidence of formal designation would be inclusion of the publicly owned land, as well as its function as a Section 4(f) property, in a city or county master plan. If a privately held property is formally designated into a master plan for future park development, Section 4(f) does not apply.

A.2 Section 4(f) Resources

This section identifies: (1) the steps taken to confirm Section 4(f) resources in the Project study area, which is defined as the Project footprint plus a 0.5-mile buffer; (2) confirms the resources that are either not subject to Section 4(f) protection or not in close enough proximity to Project activities to potentially result in a "use" as defined under Section 4(f); and (3) confirms the resources that would be subject to Section 4(f) protection, as discussed further in this analysis.

A.2.1 Determining Section 4(f) Resources

Two steps are considered in determining whether Section 4(f) applies to a project:

1. A project must involve a resource that is protected by the provisions of Section 4(f) and
2. There must be a "use" of that resource.

Protected resources include:

- Public parks and schools with publicly accessible recreational areas;
- Recreational areas of national, state, or local significance;
- Wildlife or waterfowl refuges; and
- Historic sites of national, state, or local significance.

In addition to the identification of properties within the Project study area that are subject to Section 4(f), this part of the document also discusses parks, recreational facilities, wildlife refuges, and historic properties found within or adjacent to the Limits of Disturbance (LOD) that do not trigger Section 4(f) protection because (1) they are not publicly owned, (2) they are not open to the public, (3) they are not eligible historic properties, or (4) the Project would not result in a use of the property or hinder preservation of the property.

As noted above, resources that are subject to Section 4(f) consideration include publicly owned lands such as public parks; recreational areas of national, state, or local significance; wildlife and waterfowl refuges; and historic sites of national, state, or local significance.

Resources in the Project study area were identified if they were:

- Existing publicly owned recreational and park resources, including local, regional, and state resources;
- Publicly owned wildlife and waterfowl refuges;
- Existing public bicycle, pedestrian, and equestrian trails; or
- Listed or eligible National Register of Historic Places (NRHP) historic sites.

A.2.2 Confirmed Section 4(f) Resources

Research was conducted to identify publicly owned parks, recreational areas, and wildlife and waterfowl refuges within or immediately adjacent to the Project footprint, along with historic sites within the Project area of potential effects (APE). According to the research, 34 properties within the Project study area qualify as Section 4(f) resources, including seven parks, three planned trails, 21 public/quasi-public (PQP)/conservation/mitigation lands under the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), and three historic properties. A summary of the resources identified in the study area is provided in Table A-1.

Table A-1. Summary of Properties Subject to Section 4(f) Consideration

Type of Property	Proximity to Project	Number of Properties Identified
Public Parks	Nearby	7
Public Schools with Recreational Areas[1]	N/A	0
Planned Trails	Within Project limits	3
Wildlife and Waterfowl Refuges	N/A	0
PQP and Conservation Lands	Nearby	21
NRHP-Eligible Archaeological Resources under Criterion A, B, or C	Within APE	3

Source: Geographic information system (GIS) and Historic Property Survey Report (Caltrans 2023a)
[1] Public schools are found within the 0.5-mile buffer; however, none of the recreational facilities at these schools are open to the public and are therefore not subject protection under Section 4(f).
N/A = Not available as property type not located within the Project study area; PQP= public/quasi-public; NRHP = National Register of Historic Places

Although not discussed in detail in this chapter, every Section 4(f) resource within the study area was analyzed for potential constructive use under all alternatives.

A.2.2.1 Public Parks and Recreational Facilities

A park qualifies for protection under Section 4(f) if (1) the property is publicly owned, (2) the park is open to the general public, (3) it is being used for outdoor recreation, and (4) it is considered significant by the authority with jurisdiction. The park must be publicly owned at the point at which the “use” occurs.

Figure A-1 provides a map of public parks, planned trails, and PQP/conservation and/or mitigation lands that are subject to Section 4(f). A list the three planned within the LOD can be found in Section A.3.

El Cerrito Sports Park is adjacent to and shares a boundary with the Project limits of disturbance. The western boundary of El Cerrito Sport Park that runs parallel to I-15 is bordered by vegetation and is not an access point to the park, as the primary park entrances are along the southern boundary of the park. The El Cerrito Sports Park

central parking lot is accessed via El Cerrito Road. A second parking lot can be found at the northern end of the sports park and is accessed via Rudell Road. Construction of the Project would occur within the existing right of way (ROW) and mainly in the median; therefore, access to El Cerrito Sports Park would not be inhibited or blocked off as a result of construction. No adverse effects on this resource are anticipated during construction; however, compliance with applicable local noise standards and Caltrans' Standard Specifications and Standard Project Measures would reduce construction-related impacts, if they were to occur, as they relate to noise and air quality. No proximity impacts that rise to the level of substantial impairment are anticipated for this resource. As there would be no use to this resource under Section 4(f), no additional analysis will be required for this resource.

A.2.2.2 Historic Sites

The determination of adverse effect under the Section 106 process (see 36 CFR 800.5) does not automatically mean that Section 4(f) will apply, nor does a determination of no adverse effect mean that Section 4(f) will not apply in some cases. When a project permanently incorporates land from a historic site, regardless of the Section 106 determination, Section 4(f) will apply. If a project does not permanently incorporate land from the historic property but results in an adverse effect, it will be necessary to further assess the proximity impacts of the project in terms of the potential for constructive use. This analysis is necessary to determine if the proximity impacts substantially impair the features or attributes that contribute to the NRHP eligibility of the historic site. If there is no substantial impairment, notwithstanding an adverse effect determination, there is no constructive use, and Section 4(f) does not apply. If there is substantial impairment, the determination is made by consulting with all identified officials with jurisdiction, including the State Historic Preservation Officer (SHPO)/Tribal Historic Preservation Officer (THPO) as well as the Advisory Council on Historic Preservation (ACHP), if participating, to identify the activities, features, and attributes of the property that qualify it for Section 4(f) protection and analyzing the proximity impacts of the project, including any mitigation, on those activities, features, and attributes (see 23 CFR 774.15[d][3]). The determination of Section 4(f) applicability is ultimately made by FHWA (Caltrans as assigned).

The study area for historic sites includes the Project APE, as established in accordance with the *First Amended Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and the California Department of Transportation Regarding Compliance with Section 106 of the National Historic Preservation Act, as It Pertains to the Administration of the Federal-Aid Highway Program in California* (Section 106 Programmatic Agreement [PA]) Stipulation VIII.A. The APE includes the area of direct impact (ADI). The ADI, as determined from the Project footprint, includes those areas where permanent construction would occur and any needed temporary construction easements, along with an adequate buffer to allow heavy equipment to maneuver, and potential staging areas. In addition, the APE encompasses the full boundaries of previously recorded archaeological sites that intersect the ADI as well as entire parcels where proposed work would include construction of an auxiliary lane at the outer limits of the existing and proposed ROW and buildings on those parcels are within 150 feet of the existing and proposed ROW. The area defined by the ADI, as well as the previously identified archaeological sites, is referred to herein as the archaeological survey area.

Extensions of the APE for built-environment analysis were not surveyed by archaeologists in some areas because they are in locations where extensive disturbance from development-related construction, including grading and paving, has taken place. A map of the Project APE is included in the Historic Property Survey Report (HPSR) for the Cajalco Road Widening and Safety Enhancement Project as Attachment A, Figure 3 (Caltrans 2023a).

In applying the NRHP criteria for the evaluation of historic sites, the quality of significance in American history, architecture, archaeology, engineering, and culture present in districts, sites, buildings, structures, and objects that possess integrity of location, setting, materials, workmanship, feeling, and association is considered relative to one or more of the following:

(A) The resource is associated with events that have made a significant contribution to the broad patterns of our history; or

(B) The resource is associated with the lives of persons significant in our past; or

(C) The resource embodies distinctive characteristics of a type, period, or method of construction; represents the work of a master; possesses high artistic values; or represents a significant and distinguishable entity whose components may lack individual distinction; or

(D) The resource has yielded, or may be likely to yield, information important in prehistory or history.

Section 4(f) applies to archaeological sites that are listed in or eligible for listing in the NRHP and that warrant preservation in place. Section 4(f) does not apply if FHWA (Caltrans, as assigned) determines that, after consultation with the SHPO/THPO, federally recognized Native American tribes (as appropriate), and the ACHP (if participating), the archaeological resource is important primarily because of what can be learned through data recovery, even if it is agreed that the resource will not be recovered, and it has minimal value for preservation in place. If after consultation the SHPO/THPO and ACHP (if participating) do not object to the determination that the resource is considered NRHP-eligible under Criterion D only, then Section 4(f) would not apply (see 23 CFR 774.13[b]).

The list below consists of the cultural resources within or adjacent to the APE identified in the records search, along with their status:

1. Prehistoric site P-33-000108/CA-RIV-108 (adjacent to APE; assumed eligible for the purposes of the Project only under Criterion D, with Cultural Studies Office (CSO) approval on January 27, 2023)
2. Prehistoric site P-33-000630/CA-RIV-630 (adjacent to the APE; assumed eligible for the purposes of the Project only under Criterion D, with CSO approval on January 27, 2023)
3. Prehistoric site P-33-000659/CA-RIV-659 (no longer extant in the APE)
4. Unknown site P-33-000703/CA-RIV-703 (no longer extant in the APE)
5. Prehistoric site P-33-001099/CA-RIV-1099 (adjacent to the APE; assumed eligible for the purposes of the Project only under Criterion D, with CSO approval on January 27, 2023)

6. Prehistoric site P-33-002992/CA-RIV-2992 (adjacent to the APE; assumed eligible for the purposes of the Project only under Criterion D, with CSO approval on January 27, 2023)
7. Southern California Railway/Atchison, Topeka & Santa Fe Railway in Temescal Canyon (P-33-003832/CA-RIV-3832) (previously determined ineligible for the NRHP, with SHPO concurrence dated February 10, 2021)
8. Historical period refuse scatter P-33-003858 (no longer extant in the APE; exempted from analysis per Section 106 PA Attachment 4)
9. Historical period debris site P-33-007919 (no longer extant in the APE; exempted from analysis per Section 106 PA Attachment 4)
10. Prehistoric isolate P-33-012660 (not identified during the survey; exempted from analysis per Section 106 PA Attachment 4)
11. Prehistoric isolate P-33-013691 (not identified during the survey; exempted from analysis per Section 106 PA Attachment 4)
12. Temescal Canyon Road (P-33-024785/CA-RIV-12277; P-33-028199) (previously determined not eligible for inclusion in the NRHP, with SHPO concurrence [those determinations remain valid])

During consultation between Caltrans District 8, on behalf of FHWA, and the Pechanga Band of Luiseño Mission Indians for another nearby project, three traditional cultural properties (TCPs) were identified: *Túu'uv* (TCP-1), *Qaxáalku Payómik* (TCP-2), and *Qaxáalku Kwíimik* (TCP-3). The tribe does not currently know the full extent and exact boundary of each TCP; however, together, they make up a vast, undefined geographic area that intersects portions of the current Project's APE and vicinity. The tribe considers the TCPs to be eligible for the NRHP under all four evaluation criteria; therefore, Caltrans District 8 assumes that these three TCPs are eligible for the NRHP under Criteria A, B, C, and D for the purposes of this Project only (March 10, 2022).

Table A-2 lists the historic sites within the study area and notes whether the historic site meets Section 4(f) criteria.

Table A-2. NRHP-Listed or -Eligible Historic Sites within the APE

Site Number/Name	Description	NRHP Status	Finding of Effect	Considered Section 4(f) Resource?[a]	Potential Use for the Build Alternative (Preferred Alternative)
Prehistoric site P-33-000108/CA-RIV-108	Lithic scatter	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-000630/CA-RIV-630	Lithic scatter	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-001099/CA-RIV-1099	Lithic scatter and milling site	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-002992/CA-RIV-2992	Habitation site	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Qaxáalku Kwíimik, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C, and D	No Adverse Effect	Yes	No
Qaxáalku Payómik, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C, and D	No Adverse Effect	Yes	No

Site Number/Name	Description	NRHP Status	Finding of Effect	Considered Section 4(f) Resource?[a]	Potential Use for the Build Alternative (Preferred Alternative)
Túu'uv, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C and D	No Adverse Effect	Yes	No

[a] If a resource is considered National Register of Historic Places-eligible under Criterion D only, then Section 4(f) would not apply (see 23 Code of Federal Regulations 774.13[b]). These resources were determined to not warrant preservation in place.
APE = area of potential effects; NRHP = National Register of Historic Places

A.3 Resources Evaluated Relative to the Requirements of Section 4(f): No-Use Determination(s)

Section 4(f) of the Department of Transportation Act of 1966, codified in federal law at 49 USC 303, declares that “it is the policy of the United States government that special effort should be made to preserve the natural beauty of the countryside and public park and recreation lands, wildlife and waterfowl refuges, and historic sites.”

This section of the document discusses parks, recreational facilities, wildlife refuges, and historic properties found within or next to the Project area, which includes publicly owned lands within 0.5 mile of the Project LOD, that do not trigger Section 4(f) protection because (1) they are not publicly owned, (2) they are not open to the public, (3) they are not eligible historic properties, or (4) the Project would not permanently use the property and would not hinder preservation of the property.

Seven park and/or recreational areas are within the 0.5-mile buffer study area. The seven publicly owned properties are shown on Figure A-1 (note that only qualifying Section 4[f] properties are shown on Figure A-1). Six of the seven resources are public parks; the last resource is Cleveland National Forest. Table A-3 provides a summary of all properties by type that were reviewed to determine if Section 4(f) would apply (i.e., school, park, recreational resource), including information on location, ownership, and the facilities available at each property. The table also notes whether a property is subject to Section 4(f) protection.

Table A-3. Parks and Recreation Facilities within the Study Area

Park	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance from Build Alternative (Preferred Alternative) Footprint
Yarborough Park	419 N. Poe Street, Lake Elsinore, California 92530	City of Lake Elsinore	Park features, playground, and splash pad, along with picnic tables, restrooms, and green spaces	Yes	Within 0.50 mile
Elsinore Elementary	512 W. Sumner Avenue, Lake Elsinore, California 92530	Lake Elsinore Unified School District	Basketball courts, large multi-use area, and multi-use turf area	No	Within 0.50 mile
Ortega High School	520 Chaney Street, Lake Elsinore, California 92530	Lake Elsinore Unified School District	Field area	No	Within 0.25 mile
Temescal Canyon High School	28755 El Toro Road, Lake Elsinore, California 92532	Lake Elsinore Unified School District	Two baseball fields, track field, six tennis courts, outdoor pool, and two empty fields	No	Adjacent
Dr. Bernice Jameson Todd Elementary	25105 Mayhew Canyon Road, Corona, California 92883	Corona-Norco Unified School District	Large empty field	No	Within 0.50 mile
Temescal Valley Elementary	22950 Claystone Avenue, Corona, California 92883	Corona-Norco Unified School District	Large field area	No	Within 0.10 mile

Park	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance from Build Alternative (Preferred Alternative) Footprint
El Cerrito Middle School	7610 El Cerrito Road, Corona, California 92881	Corona-Norco Unified School District	Large field	No	Within 0.15 mile
El Cerrito Sports Park	7500 El Cerrito Road, Corona, California 92881	City of Corona	Multiple large fields, four baseball fields, two tennis/basketball courts, and a playground area	Yes	Adjacent
Coral Canyon Park	24880 Coral Canyon Road, Corona, California 92883	N/A (most likely City of Corona but not confirmed)	Park features a barbecue area, picnic benches, drinking fountains, two baseball fields, and appealing playgrounds with separate play areas for ages 2–5 and 5–12	Yes	Within 0.10 mile
Rimpau Park	1156 East Ontario Avenue, Corona, California 92881	City of Corona	Park includes barbecue areas, covered shelter, picnic area, playground, and tot lot	Yes	Within 0.50 mile
Citrus Community Park	1250 Santana Way, Corona, California 92881	City of Corona	Park includes public green space with two playgrounds, a splash pad, picnic tables, and grassy areas for sports	Yes	Within 0.50 mile

Park	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance from Build Alternative (Preferred Alternative) Footprint
Chase Park	1415 E. Chase Drive, Corona, California 92881	City of Corona	Large field	Yes	Within 0.50 mile
Centennial High School	1820 Rimpau Avenue, Corona, California 92881	Corona-Norco Unified School District	Large field, outdoor swimming pool, football/track and field, six tennis courts, and two baseball fields	No	Within 0.50 mile
Belltower Montessori Academy	1187 Magnolia Avenue, Corona, California 92879	N/A	Playground area	No	Within 0.10 mile
CEAC College Preparatory School	1101 California Avenue, Corona, California 92881	N/A	Playground area	No	Within 0.06 mile
Morgan Academy	25118 Birchtree Court, Temescal Valley, California 92883	N/A	Home (front yard/backyard)	No	Within 0.04 mile
Olive Branch Christian School	7702 El Cerrito Road, Corona, California 92881	N/A	Playground area	No	Within 0.10 mile
Keith McCarthy Academy	1405 Education Way, Lake Elsinore, California 92530	Lake Elsinore Unified School District	None	No	Within 0.07 mile

Park	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance from Build Alternative (Preferred Alternative) Footprint
Valley Adult School	21330 Lemon Street, Wildomar, California 92595	N/A	Basketball courts and playground area	No	Within 0.07 mile
Jeannette Ellis Center for Child Development	411 W. Heald Avenue, Lake Elsinore, California 92530	Lake Elsinore Unified School District	Playground area	No	Within 0.15 mile
Cleveland National Forest	Riverside County	U.S. Department of Agriculture, Forest Service	National forest	Yes	Within 0.50 mile

Source: GIS

The resources that are not protected under Section 4(f) are either not publicly owned or not open to the public. This specifically applies to all of the schools and educational facilities within the Project study area, as none of the recreational uses at these institutions are open to the general public. Because of distance and/or the proposed activities in the vicinity of the facilities listed in Table A-3, none of the facilities would be subject to permanent, temporary, or constructive use under the Build Alternative (Preferred Alternative).

Within the Project study area, the only trails that were identified through research were three planned trails. Table A-4, below, lists the names of the planned trails and their status. These are also shown on Figure A-1. Analysis of each resource is found below.

Table A-4. Planned Resources

Planned Trails	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance from Build Alternative (Preferred Alternative) Footprint
Bedford Wash Planned Trail	N/A	N/A	Trail	Yes	Within
Planned Butterfield Trail	N/A	N/A	Trail	Yes	Within
Potential Trail	N/A	N/A	Trail	Yes	Within

A.3.1 Bedford Canyon Wash Trail (Planned Trail)

Located within the study area in the city of Corona, the planned Bedford Canyon Wash Trail would be a multi-use trail that would run northeast/southwest generally along Bedford Wash in the Arantine Hills. As of March 2023, Riverside County Parks has not initiated a formal plan for development of the trail, and the trail does not currently exist.

The land that is currently projected for the potential planned trail is not publicly owned property planned for park or recreation area, and it does not presently function as such. There is no evidence of formal designation for the Bedford Canyon Wash Trail, as it does not appear in a city or county master plan. Because a formal plan for development of the Bedford Canyon Wash Trail has not been proposed, the County of Riverside is not expected to begin development on this planned facility prior to construction of the Project. Based on current preliminary design plans, a small portion of the area that is expected to eventually be part of the planned trail would be affected by the Project. However, no adverse effects on this resource are anticipated, as the Project would not preclude the future development of the trail. In addition, once constructed, the Project would operate within the existing State ROW, with the majority of improvements occurring within the existing I-15 median. The planned trail is expected to cross under an existing overpass. As such, the Project would not impede intended future use of the

planned trail or result in impacts. Therefore, the Project would not result in a use of the planned Bedford Canyon Wash Trail, as defined under Section 4(f).

A.3.2 Potential Trail Connection (Conceptual Only)

The Potential Trail Connection along Cajalco Road and I-15 was identified in a 2015 Riverside County Regional Park and Open Space District planning document, *Butterfield Overland Trail Project Temescal Valley Alignment Analysis.* Located within the study area in the city of Corona, the Potential Trail Connection would be a multi-use trail that would run along I-15 from Cajalco Road to Bedford Canyon Wash. It is expected that this trail connection would link several community trails and the planned Class II bike lanes to the Bedford Canyon Wash Trail. As of March 2023, Riverside County Parks has not initiated a formal plan for development of the trail, and the trail connection does not currently exist. The land that is currently projected for the potential planned trail is not publicly owned property planned for a park or recreation area, and it does not presently function as such. There is no evidence of formal designation for this conceptual trail, as it does not appear in a city or county master plan.

Because the plan for this trail connection remains in the conceptual phase, as of March 2023, the County of Riverside is not expected to begin development on this planned facility prior to the construction of the Project. No adverse effects on this resource are anticipated, and the Project would not preclude future development of the trail. As such, the Project would not impede intended future use of the planned trail or result in impacts. Therefore, the Project would not result in a use of the Potential Trail Connection, as defined under Section 4(f).

A.3.3 Butterfield Trail Stage Route Historic Alignment (Planned Trail)

The Butterfield Trail Stage Route Historic Alignment (Butterfield Trail) runs through the Temescal Valley. With cooperation from various local agencies, the Butterfield Trail project would create a recreational trail through the use of a public ROW, joint use agreements, easements, and other cooperative measures for development. As described in the 2015 Riverside County Regional Park and Open Space District planning document titled *Butterfield Overland Trail Project Temescal Valley Alignment Analysis*, the Butterfield Trail would be a multi-use recreational trail with a variety of trail types, depending on the location, including decomposed granite walking trails, unpaved natural-surface trails, rubberized asphalt trails, and Class II bike lanes. The Butterfield Trail crosses the city of Corona along current-day Temescal Canyon Road. Within the Section 4(f) study area, the *Butterfield Overland Trail Project Temescal Valley Alignment Analysis* includes a proposal for a Class II bike lane along the historic alignment (current-day Temescal Canyon Road), which stops at Tom Barnes Street.

The Class II bike lane associated with the Butterfield Trail would run parallel to the Project alignment, approximately 0.4 mile to the east. The Riverside County Regional Park and Open Space District does not currently have a plan to implement the Butterfield Trail, and the Project would be expected to be completed prior to development of the Butterfield Trail. Because the alignment for the proposed Butterfield

Trail would be 0.4 mile from areas that would be temporarily and permanently affected by the Project, Project-related construction, which would occur within the State ROW, would not obstruct access to the Butterfield Trail should it be developed first. No adverse effects on this resource are anticipated, and the Project would not preclude future development of the Butterfield Trail. As such, the Project would not impede intended future use of the Butterfield Trail or result in impacts. Therefore, the Project would not result in a use of this planned recreational resource.

A.3.3.1 MSHCP Lands

Table A-5 provides a summary of the 21 conservation areas within the study area, including information regarding location, ownership, the facilities available at each property, and whether the property is subject to Section 4(f) protection. PQP lands are properties within western Riverside County that are owned, managed, or maintained by public agencies for the purposes of conservation.

Table A-5. Conservation Properties within 0.5-Mile Radius

Resource Name	Location	Current Ownership	Facilities	Trigger Section 4(f) Protection?	Distance Build Alternative (Preferred Alternative) Footprint
Alberhill Creek	Riverside County	Riverside County Flood Control District	Conserved Land	Yes	Within 0.50 mile

Circle K Donation	Riverside County	Alimentation Couche-Tard	Conserved Land	Yes	Within 0.50 mile

MOU = Memorandum of Understanding; RCA = Western Riverside County Regional Conservation Authority; RCRCD = Riverside-Corona Resource Conservation District

The 21 conservation areas would not be affected by the Build Alternative (Preferred Alternative) because none are within the Project LOD. They qualify as Section 4(f) protected resources because they are designated wildlife preserves/refuges for the conservation and management of resources, including wildlife.

The Lake Mathews – Estelle Mountain Reserve, which is jointly owned and managed by the Metropolitan Water District and Riverside County Habitat Conservation Agency, is a bird resting and feeding location (RCA 2023).

Alberhill Creek is owned by the Riverside County Flood Control District, which provides services such as watershed protection and floodplain management (City of Lake Elsinore 2016). The Riverside-Corona Resource Conservation District is grantee to a conservation easement that covers approximately 7.5 acres of city and county lands (RCRCD 2023). The easement is centered on Tequesquite Creek, from just downstream of the Riverside County Flood Control District channel to the stream's confluence with the Santa Ana River (RCA 2001).

The San Jacinto Wildlife Area has approximately 900 acres of restored wetlands. It is the first State wildlife area to utilize reclaimed water to enhance its wetlands and is a waterfowl refuge. The primary purpose of Western Riverside County Regional Conservation Authority (RCA) conserved lands under the MSHCP (RCA conservation areas) is to promote the biological viability of western Riverside County's ecosystems, habitats, and species, along with their recovery. The goal is to reduce the need to list additional species in the future (RCA 2023).

Table A-6 lists historic properties found within or next to the Project limits. It also notes whether a property is subject to Section 4(f) protection.

Table A-6. Historic Properties within the Project Area

Site Number/Name	Description	NRHP Status	Finding of Effect	Considered Section 4(f) Resource?[1]	Potential Use for the Build Alternative (Preferred Alternative)
Prehistoric site P-33-000108/CA-RIV-108	Lithic scatter	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-000630/CA-RIV-630	Lithic scatter	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-001099/CA-RIV-1099	Lithic scatter and milling site	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Prehistoric site P-33-002992/CA-RIV-2992	Habitation site	Assumed NRHP eligible under Criterion D for the purposes of this Project only	No Adverse Effect	No	No
Qaxáalku Kwíimik, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C, and D	No Adverse Effect	Yes	No
Qaxáalku Payómik, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C, and D	No Adverse Effect	Yes	No

Site Number/Name	Description	NRHP Status	Finding of Effect	Considered Section 4(f) Resource?[1]	Potential Use for the Build Alternative (Preferred Alternative)
Túu'uv, traditional cultural property	Prehistoric traditional cultural property, encompassing vast geographical area	Assumed NRHP eligible under Criteria A, B, C, and D	No Adverse Effect	Yes	No

[1] If a resource is considered National Register of Historic Places-eligible under Criterion D only, then Section 4(f) would not apply (see 23 Code of Federal Regulations 774.13[b]).

Four of the seven resources listed above (P-33-000108, P-33-000630, P-33-001099, and P-33-002992) are assumed eligible for the purposes of the Project only under Criterion D, with CSO approval on January 27, 2023. In addition, the three TCPs (*Túu'uv, Qaxáalku Payómik*, and *Qaxáalku Kwíimik*) are assumed NRHP eligible, with CSO approval dated March 10, 2022, under all four criteria. Although seven historic properties are assumed eligible in the Project APE, only three qualify for protection under Section 4(f) because the Project would not permanently use a property and would not hinder preservation of a property; therefore, Section 4(f) does not apply to these resources. In addition, Section 4(f) does not apply to archaeological sites that are important chiefly for their information value and have minimal value for preservation in place. This principle applies regardless of whether data recovery is undertaken. If an archaeological site is eligible for values beyond its information, Caltrans will consider whether 4(f) applies on a case-by-case basis. As stated earlier, Section 4(f) does not apply for these resources.

A finding of no adverse effect was prepared for the Project and approved in March 2023 (Caltrans 2023b). It concluded that, based on the analysis of the criteria of adverse effect presented in the report, the Project would not result in any adverse effects on historic properties within or adjacent to the APE. There are no physical manifestations of these TCPs within the Project limits that the Project could affect. No proximity impacts that rise to the level of substantial impairment are anticipate for these TCPs. There would be no use under Section 4(f) for any of these historic properties.

A.3.3.2 Summary

In summary, Table A-3 through Table A-6 list all properties that were evaluated relative to the requirements of Section 4(f). The tables identify those properties that would not trigger Section 4(f) protection because (1) they are not publicly owned, (2) they are not open to the public, (3) they are not eligible historic properties, or (4) the Project would not permanently use the properties and would not hinder preservation of the properties. Please see the table entries for specifics by property.

A.4 Section 6(f)

The Land and Water Conservation Fund Act was established by Congress in 1964 to fulfill a bipartisan commitment to safeguard natural areas, water resources and cultural heritage, and to provide recreation opportunities to all Americans. The Land and Water Conservation Fund Act program provides matching grants to States and local governments for the acquisition and development of public outdoor recreation areas and facilities. Section 6(f) of this Act prohibits the conversion of property acquired or developed with these grants to a non-recreational purpose without the approval of the Department of Interior's National Park Service.

The purpose of the Land and Water Conservation Fund is to assist in preserving, developing, and ensuring accessibility to outdoor recreational resources and strengthen the health and vitality of the citizens of the United States by funding, planning, acquiring, and developing such facilities. Recreational facilities awarded such funds are subject to the provisions of the act. The Land and Water Conservation Fund's most important tool for ensuring long-term stewardship is its "conversion protection" requirement. Section 6(f)(3) strongly discourages conversions of state and local park and recreational facilities to other uses.

Section 6(f)(3) of the Land and Water Conservation Fund Act states that no property acquired or developed with Land and Water Conservation Fund assistance will be converted to uses other than public outdoor recreational uses without the approval of the secretary of the Department of the Interior (the National Park Service is a service of the Department of the Interior) and only if the secretary finds it to be in accord with the Statewide Comprehensive Outdoor Recreation Plan and only under such conditions the secretary deems necessary to ensure the substitution of other recreational properties of at least equal fair market value and reasonably equivalent usefulness and location (36 CFR Part 59).

Prerequisites for conversion approval, as provided in 36 CFR Part 59.3, are outlined below.

- All practical alternatives to the proposed conversion have been evaluated.
- The fair market value of the property to be converted has been established, and the property proposed for substitution is of at least equal fair market value, as established by an approved appraisal.
- The property proposed for replacement is of reasonably equivalent usefulness and location as that being converted.
- The property proposed for substitution meets the eligibility requirements for Land and Water Conservation Fund–assisted acquisition.
- In the case of assisted sites that are partially rather than wholly converted, the impact of the converted portion on the remainder will be considered. If such a conversion is approved, the unconverted area must remain recreationally viable or must also be replaced.

- All necessary coordination with other federal agencies has been satisfactorily accomplished.

The guidelines for environmental evaluation were satisfactorily considered by the National Park Service during its review of the proposed Section 6(f)(3) action.

In cases where proposed conversion arises from another federal action, final review of a proposal will not occur until the National Park Service regional office is assured that all environmental review requirements related to the other action have been met, state intergovernmental clearinghouse review procedures have been adhered to if the proposed conversion and substitution constitute significant changes to the original Land and Water Conservation Fund project, and the proposed conversion and substitution are in accord with the Statewide Comprehensive Outdoor Recreation Plan or equivalent recreation plans.

Section 6(f) conversion requires additional coordination with the agency of jurisdiction and California State Parks, which oversees the Land and Water Conservation Fund program for the National Park Service, regarding project effects, conversion areas, and replacement properties.

One Section 6(f) resource, Cleveland National Forest, has been identified within the Project study area (see evaluation below).

Cleveland National Forest is the southernmost national forest in California. The forest is divided into three different Ranger Districts (Descanso, Palomar, and Trabuco) within three different counties (San Diego, Riverside, and Orange). The forest covers 465,000 acres, extending from Orange County and Riverside County to an area 5 miles from the border with Mexico. The U.S. Forest Service, a government agency within the U.S. Department of Agriculture, owns and operates Cleveland National Forest. The forest contains trails and lakes that create opportunities for fishing, hiking, camping, climbing, biking, picnicking, and other outdoor activities.

Cleveland National Forest has received Land and Water Conservation Fund funding multiple times throughout its history. The reasons for this funding can be found on the Land and Water Conservation Fund website: https://www.parks.ca.gov/?page_id=21360 (California Department of Parks and Recreation 2023).

Although the forest is within the Project study area, according to the Land and Water Conservation Fund website, it is approximately 0.3 mile from the Project footprint. Given the distance of the resource to the Project, the Project would have no impact on the resource. Therefore, there would be no effects on Section 6(f) resources.

Appendix B Title VI Policy Statement

CALIFORNIA STATE TRANSPORTATION AGENCY GAVIN NEWSOM, GOVERNOR

California Department of Transportation

OFFICE OF THE DIRECTOR
P.O. BOX 942873, MS–49 | SACRAMENTO, CA 94273–0001
(916) 654-6130 | FAX (916) 653-5776 TTY 711
www.dot.ca.gov

September 2025

TITLE VI/NON-DISCRIMINATION POLICY STATEMENT

It is the policy of the California Department of Transportation (Caltrans), in accordance with Title VI of the Civil Rights Act of 1964 and the assurances set forth in the Caltrans' Title VI Program Plan, to ensure that no person in the United States shall on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. Related non-discrimination authorities, remedies, and state law further those protections, including sex, disability, religion, sexual orientation, age, low income, and Limited English Proficiency (LEP).

Caltrans is committed to complying with 23 C.F.R. Part 200, 49 C.F.R. Part 21, 49 C.F.R. Part 303, and the Federal Transit Administration Circular 4702.1 B. Caltrans will make every effort to ensure nondiscrimination in all of its services, programs, and activities, whether they are federally funded or not, and that services and benefits are fairly distributed to all people, regardless of race, color, or national origin (including LEP). In addition, Caltrans will facilitate meaningful participation in the transportation planning process in a non-discriminatory manner.

The overall responsibility for this policy is assigned to the Caltrans Director. The Caltrans Title VI Coordinator is assigned to the Caltrans Office of Civil Rights Deputy Director, who then delegates sufficient responsibility and authority to the Office of Civil Rights' managers, including the Title VI Branch Manager, to effectively implement the Caltrans Title VI Program. Individuals with questions or requiring additional information relating to the policy or the implementation of the Caltrans Title VI Program should contact the Title VI Branch Manager at title.vi@dot.ca.gov or at (916) 639-6392, or visit the following web page: https://dot.ca.gov/programs/civil-rights/title-vi.

Appendix C Environmental Commitments Record (ECR)

This page intentionally left blank

Environmental Commitments Record (ECR)

DIST-CO-RTE: 08-RIV-15 **PM/PM:** 20.3/40.1 **EA/Project ID.:** EA 08-0J0820/PN 0818000063
Project Description: The Project would construct two tolled express lanes in both the northbound and southbound directions along Interstate (I-) 15 in Riverside County, California from State Route (SR-) 74 (Central Avenue) (post mile [PM] 22.3) in the City of Lake Elsinore, through the unincorporated Riverside County community of Temescal Valley, to El Cerrito Road (PM 38.1) in the City of Corona, for a distance of approximately 15.8 miles. The proposed Project would also add a southbound auxiliary lane between both the Main Street Off-Ramp and SR-74 (Central Avenue) On-Ramp, and the SR-74 (Central Avenue) Off-Ramp and Nichols Road On-Ramp. In addition, due to the SB express lanes access between the Cajalco Road Interchange and Weirick Road Interchange, the SB I-15 Weirick Road Off-Ramp would be reconfigured as a dual lane exit. Associated improvements for the express lanes, including advance signage and transition striping, would extend approximately two miles from each end of the express lane limits to PM 20.3 in the south and PM 40.1 in the north.
Date (Last modification): December 2, 2025

PERMITS

Permit	Agency	Application Submitted	Permit Received	Permit Expiration	Permit Requirement Completed by:	Permit Requirement Completed on:	Comments
Federal Endangered Species Act Section 7 consultation	U.S. Fish and Wildlife Service (USFWS)						Section 7 consultation has been addressed through the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Consistency Determination process (see below status). Completion and results of consultation to be documented in Final Environmental Documentation.
Section 404 Nationwide Permit	U.S. Army Corps of Engineers (USACE)						Application to be submitted after approval/adoption of Project Report and Final Environmental Document, and permit to be obtained prior to construction.
1602 Agreement for Streambed Alteration	California Department of Fish and Wildlife (CDFW)						Application to be submitted after approval/adoption of Project Report and Final Environmental Document, and permit to be obtained prior to construction.
Joint Project Review (JPR) for MSHCP consistency	CDFW and USFWS						MSHCP Consistency Analysis concurred by CDFW and USFWS through the issuance of a streamlined Biological Opinion September 9, 2025.
Air quality conformity determination	Federal Highway Administration (FHWA)						The Project received the required air quality conformity determination letter from FHWA on July 10, 2025. A copy of the letter is included in Appendix H.
Porter-Cologne Act and Clean Water Act Section 401 Water Quality Certification	Regional Water Quality Control Board (RWQCB)						Application to be submitted after approval/adoption of Project Report and Final Environmental Document, and certification to be obtained prior to construction.
JPR for MSHCP consistency	Regional Conservation Authority (RCA)						Joint Project Review was approved May 22, 2025.
Clean Water Act Section 402— A stormwater pollution prevention plan (SWPPP) required by the General National Pollution Discharge Elimination System (NPDES) Construction Permit	State Water Resources Control Board (SWRCB)						SWPPP shall be submitted to Storm Water Multiple Application and Report Tracking System 30 days prior to construction. Document that at 90% completion, D8 Maintenance NPDES will perform a field review ("90% walk thru"), confirming that all treatment BMPs were installed per plan, (Caltrans requirement). Document that at 100% completion, D8 Construction NPDES will review all disturbed soil areas and verify all are stabilized as required per the Statewide Construction General Permit (CAS000002) (WQ-1).
Encroachment Permit	Riverside County Flood Control and Water Conservation District						Process to be initiated after approval/adoption of Project Report and Final Environmental Document, and permit to be obtained prior to construction.
Authorization obtained via the process prescribed under California Public Utilities Commission (CPUC) General Order 88-B	California Public Utility Commission (CPUC)						Authorization to be requested after approval/adoption of Project Report and Final Environmental Document and obtained prior to construction.

ENVIRONMENTAL COMMITMENTS

PA&ED

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Biology	**NC-15 (NES BIO-15) Determination of Biologically Equivalent or Superior Preservation (DBESP).** A DBESP report that provides analysis of direct and indirect impacts, avoidance, minimization, and compensatory mitigation, along with the functions and values of the resources being affected as related to MSHCP covered species, has been prepared and submitted to RCA, USFWS, and CDFW for review and approval. The DBESP will be followed by an addendum to the DBESP for each Project phase. Amendments to the Project's DBESP, associated with different Project Phases, will be provided to the Wildlife Agencies for review and approval a minimum of 120 calendar days prior to ground disturbance for the respective Phase. The conceptual mitigation approach is outlined further in Appendix I of the DBESP, with mitigation amounts (acres) for each feature identified. The addendum will outline the detailed mitigation strategy and will provide details on including offsite riparian/riverine mitigation that is comparable in type (i.e., in kind) to the impacted areas to ensure type conversion does not occur. It will also include an onsite Habitat Mitigation and Monitoring Plan (HMMP), which will be required prior to construction, with review by RCA and the wildlife agencies. The HMMP will be approved by RCA and wildlife agencies prior to construction and will include clear success criteria to ensure that restored areas are returned to a biologically equivalent or superior condition.	Sections 2.4.1, 2.4.2, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC (Preparation), Resident Engineer and Contractor (Implementation)						Yes

PS&E/BEFORE RTL

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Other	**TR-1 Transportation Management Plan** During the Plans, Specifications, and Estimates (PS&E) phase, a detailed Transportation Management Plan (TMP) will be developed for implementation prior to and during construction. Some of the key elements recommended in the TMP include the following: • Public information/public awareness campaign • Motorist information strategies • Incident management • Construction strategies	Sections 2.2.7 and 2.2.8, EIR/EA	Yes	RCTC (Preparation), Resident Engineer and Contractor (Implementation)	2023 SS Section: 12-4					No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	• Demand management • Alternate Route Strategies									
Visual Resources	**AES-1 Project Aesthetics and Landscape Master Plan –** During final design, a Project Aesthetics and Landscape Master Plan (PALM) must be developed to identify the aesthetic and landscaping elements to be utilized by the Project, including aesthetic treatments for noise barriers and retaining walls, to be constructed. The PALM shall be developed in consultation with the Caltrans District Landscape Architect and Caltrans design policies.	Section 2.2.9, EIR/EA	Yes	RCTC (preparation), Caltrans District 8 Landscape Architect, Resident Engineer, Contractor (implementation)						No
Visual Resources	**AES-2 Noise Barriers and Retaining Walls** – The design of noise barriers, retaining walls, and other wall structures must comply with Caltrans standards for noise attenuation, safety requirements, and other features. Aesthetic features must be reviewed by the Caltrans District Landscape Architect (DLA). Architectural details, such as texture and color, must be considered carefully in effort to minimize the appearance of the noise barrier and retaining wall surfaces. The noise barriers and retaining walls must also be designed to comply visually with the surrounding community character, following the guidelines of the City of Corona, City of Lake Elsinore, and County of Riverside aesthetic recommendations consistent with the PALM developed in the final design phase.	Section 2.2.9, EIR/EA	Yes	RCTC, Caltrans District 8 Landscape Architect, Resident Engineer, Contractor						No
Visual Resources	**AES-3 Landscaping** – Project landscaping must follow Caltrans standard policies and guidelines for aesthetic treatments and must be designed and implemented under the direction of the Caltrans DLA. All soil area disturbed during construction of the Project must be treated with a native hydroseed mix that includes native wildflowers. The loss of the vegetation from the disturbed soil areas must be replaced by plantings of native shrubs and ground cover in addition to hydro seeding, where appropriate, after construction. Highway landscaping where required will be consistent with the existing character of its respective community and use drought resistant, regional native plants when applicable to the greatest extent possible. These regional native plant materials, where deemed necessary, must also be chosen in respect to the air quality of the implementation area. A District Biologist must be consulted throughout the design and implementation process.	Section 2.2.9, EIR/EA	Yes	RCTC, Caltrans District 8 Landscape Architect, Caltrans District 8 Biologist, Resident Engineer, Contractor						No
Visual Resources	**AES-4 Lighting and Signage** – Changeable message signs and other signs consisting of illuminating and/or moving features must be placed to avoid viewsheds to the greatest extent possible, along with consultation with the Caltrans District Landscape Architect (DLA). Specifically, the placement of signs will intentionally avoid obstructing views of identified visual resources, particularly the seasonal California poppy bloom near Walker Canyon. Highway lighting must conform to Caltrans design guidelines and be placed to illuminate only intended areas. Light shielding with non-glare hoods will be incorporated into project designs to limit dispersion of light	Section 2.2.9, EIR/EA	Yes	RCTC, Caltrans District 8 Landscape Architect, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	beyond the Project right of way (ROW) during all night work, including for construction staging areas. Lighting will incorporate yellow-white or amber-white light emitting fixtures of 3000K or less.									
Water Quality	**WQ-2 Prepare a Storm Water Pollution Prevention Plan.** Prior to the start of soil-disturbing activities, Riverside County Transportation Commission (RCTC) will ensure that a SWPPP will be prepared and implemented to address all construction-related activities, equipment, and materials with the potential to have an impact on water quality. The SWPPP will identify the sources of pollutants that may affect the quality of stormwater and include the construction site best management practices (BMPs) to control pollutants such as sediment control, catch basin inlet protection, construction materials management, and non-stormwater BMPs. Additional BMP reference material is contained within the Project Planning and Design Guide (Caltrans 2019) and Construction Manual (Caltrans 2020). These BMPs include, but are not limited to, temporary sediment control, temporary soil stabilization, scheduling, waste management, materials handling, and other non-stormwater BMPs.	Section 2.3.2, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)	2023 SS Section: 13-3.01C(2)					No
Other	**GEO-1 Geotechnical Investigation.** Under this measure during the PS&E phase, a detailed geotechnical investigation will be conducted by qualified geotechnical personnel to assess the geotechnical conditions at the Project area. The geotechnical investigation will include exploratory borings to investigate site-specific soils and conditions and to collect samples of subsurface soils for laboratory testing. Those soil samples will be tested to evaluate liquefaction potential, collapsibility potential, stability, and corrosion potential. The review and approval findings and recommendations of the geotechnical investigation will be summarized in a Structure Foundation Report and a Geotechnical Design Report to be submitted to Caltrans for review and approval. Those findings and recommendations will be incorporated in the final design of the Build Alternative (Preferred Alternative).	Section 2.3.3, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Paleontology	**PAL-1 Paleontological Mitigation Plan.** During final design, RCTC will ensure that a Paleontological Mitigation Plan (PMP) is prepared, and that the requirements included are implemented during construction. The PMP shall include all elements identified as being required in this document on the Caltrans Standard Environmental Reference (SER), including. a. Required and recommended monitoring locations. b. A description of, and requirement for all construction personnel to attend, a worker training program, including documentation of completion of the training. c. A signed curation agreement with the Western Science Center or another accredited repository. d. Detailed procedures for monitoring, fossil recovery, laboratory analysis, and museum curation and notification	Section 2.3.4, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Contractor Implementation)	2023 SSP Section: 14-7.04					Yes

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	procedures in the event of a fossil discovery by a paleontological monitor or other project personnel.									
Hazardous Waste	**HW-1 Asbestos-Containing Materials and Lead-Based Paint.** The Project would include the widening of 15 bridges. Asbestos containing materials (ACM) are present in the gray felt pad along the southbound and northbound Brown Canyon Wash Bridge and Weirick Road Undercrossing Bridge inner guard rails. In addition, lead-based paint (LBP) is present in the light gray paint on the railing of northbound Temescal Wash Bridge and in the yellow lane surface paint at northbound Indian Wash Bridge. ACM and LBP associated with these bridges may be impacted by the Project. In addition, there is a potential for all 15 bridges to contain ACMs and LBP in areas that have not been sampled. RCTC resident engineer or designated contractor will ensure that bridge features with a likelihood to contain ACM and LBP will be sampled for all areas of the 14 affected bridges that will be disturbed by the Project during the PS&E phase, prior to any demolition or disturbance activities. RCTC's resident engineer or designated contractor will ensure that the survey will be conducted in conformance with the United States Environmental Protection Agency National Emission Standards for Hazardous Air Pollutants 40 Code of Federal Regulations (CFR), South Coast Air Quality Management District Rule 1403, and in accordance with Caltrans Standard Specifications, Section 14- 11.13, Disturbance of Existing Paint Systems on Bridges, and Section 14-11.16, Asbestos-Containing Construction Materials in Bridges.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-11.16					No
Hazardous Waste	**HW-8 Lead Compliance Plan.** Soil within the Caltrans ROW of the Project limits, including the median, shoulders and ramps, were sampled for aerially deposited lead (ADL). The ADL survey classified the soil in these areas as unregulated Type X soil, which is non-hazardous and suitable for reuse on site without restriction, under the July 1, 2016, ADL Agreement between Caltrans and the DTSC. This ADL Agreement allows such soils to be safely reused within the Project limits, as long as all requirements of the ADL Agreement are met. Per the soil reuse agreement, a Lead Compliance Plan (LCP) is required for worker safety. Prior to construction, RCTC's resident engineer or designated contractor will ensure that a Lead Compliance Plan (LCP) is developed by a Certified Industrial Hygienist to protect workers from exposure to lead associated with aerially deposited lead (ADL), lead-based paint (LBP), and traffic stripe and pavement makings. The LCP will include procedures for the handling, management, sampling, and disposal of material containing lead. ADL and LBP investigations and traffic striping removal are separate tasks usually conducted by separate contractors, which each require a separate LCP.	Section 2.3.5, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)	2023 SS Section: 7-1.02K(6)(j)(iii)					No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Biology	**NC-12 (NES BIO-12) Water Pollution and Erosion Control Plans.** Plans for water pollution and erosion control will be prepared. The plans will describe sediment and hazardous materials control, dewatering or diversion structures, fueling and equipment management practices, and use of plant material for erosion control. Plans will be reviewed and approved by the County of Riverside and Caltrans prior to construction (MSHCP Volume I, Sections 6.1.4 and 7.5.3). The following measures will be provided: • Water pollution and erosion control plans will be developed and implemented in accordance with Regional Water Quality Control Board (RWQCB) requirements (MSHCP Volume I, Appendix C) and will ensure that no fluids or sediment from construction will enter into the Environmentally Sensitive Area (ESA) fenced areas. • Measures, including measures required through the National Pollutant Discharge Elimination System requirements, will be required for work in proximity to MSHCP Conservation Areas to ensure that the quantity and quality of runoff discharged into the MSHCP Conservation Area are not altered in an adverse way when compared to existing conditions. In particular, stormwater systems will be designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials, or other elements that might degrade or harm biological resources or ecosystem processes within the MSHCP Conservation Area. • New surface flows will be treated prior to reaching waterways. • Sediment and erosion control measures will be implemented until such time soils are determined to be successfully stabilized (MSHCP Volume I, Section 7.5.3). • No erodible materials will be deposited into watercourses or areas demarcated with ESA fencing. Brush, loose soils, or other debris material will not be stockpiled within stream channels or on adjacent banks (MSHCP Volume I, Section 7.5.3, and MSHCP Volume I, Appendix C). • Projects that cannot be conducted without placing equipment or personnel in riparian vegetation areas should be timed to avoid the breeding season of riparian/associated species identified in MSHCP Global Species Objective No. 7 (MSHCP Volume I, Appendix C). The breeding season as defined by the MSHCP is March 1 through June 30. • If stream flows must be diverted, the diversions will be conducted using sandbags or other methods requiring minimal instream impacts. Silt fencing or other sediment-trapping materials will be installed at the downstream end of construction activity to minimize the transport of sediments off site. Settling ponds where sediment is collected will be cleaned out in a manner that prevents the sediment from reentering the stream. Care will be exercised when	Sections 2.4.1, 2.4.4, 2.4.5, and 2.4.6, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Project Biologist, Contractor (Implementation)						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	removing silt fences, as feasible, to prevent debris or sediment from returning to the stream (MSHCP Volume I, Section 7.5.3, MSHCP Volume I, Appendix C). Short-term diversions will consider effects on wildlife (MSHCP Volume I, Section 7.5.3). • Equipment storage, fueling, and staging areas will be located on non-sensitive upland sites with minimal risks of direct drainage into riparian areas or other sensitive habitats (MSHCP Volume I, Section 7.5.3, and MSHCP Volume I, Appendix C). These designated areas will be located in such a manner as to prevent any runoff from entering sensitive habitat. Necessary precautions will be taken to prevent the release of cement or other toxic substances into surface waters. Project-related spills of hazardous materials will be reported to appropriate entities including, but not limited to, the applicable jurisdictional city, USFWS, CDFW, and RWQCB, and will be cleaned up immediately and contaminated soils removed to approved disposal areas (MSHCP Volume I, Appendix C). • All equipment maintenance, staging, and dispensing of fuel, oil, coolant, or any other toxic substances will occur only in designated areas within the proposed grading limits of the Project site. These designated areas will be clearly marked and located in such a manner as to contain runoff (MSHCP Volume I, Section 7.5.3). This will ensure that there will be no discharge into MSHCP Conservation Areas adjacent to the limits of disturbance (LOD) (MSHCP Volume I, Section 6.1.4).									
Biology	**NC-17 (NES BIO-17). Aquatic Resource Compensatory Mitigation.** Mitigation for permanent impacts, including permanent shading, on aquatic resources (i.e., U.S. Army Corps of Engineers [USACE]/Regional Water Quality Control Board [RWQCB] wetland and non-wetland Waters of the U.S./State, and CDFW streambed and associated riparian habitat[1]) will occur through permittee-responsible mitigation, purchase of mitigation bank credits through an agency-approved mitigation bank, in-lieu fee program, or other approved mitigation provider. A 3:1 mitigation ratio is proposed for USACE/RWQCB jurisdictional wetlands and CDFW riparian vegetation. A ratio of 2:1 for permanent impacts and permanent shading impacts on USACE/RWQCB jurisdictional non-wetlands and CDFW unvegetated streambeds is proposed. The temporary impacts on USACE/RWQCB wetlands and non-wetlands, CDFW unvegetated streambed, and associated CDFW riparian habitat may be replaced through restoration of the temporarily affected area to pre-Project conditions, at a ratio of 1.25:1 and through permittee-responsible mitigation or another approved mitigation program. All temporary impacts would be replaced, where feasible, at their current locations	Sections 2.4.1, 2.4.2, 2.4.4, and 2.4.6, EIR/EA	Yes	RCTC						Yes

[1] MSHCP riparian/riverine resources have the same limits as CDFW features, with the exception that riparian/riverine resources also include adjacent buffer/upland areas that would not be considered CDFW jurisdiction.

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	following preparation of an Habitat Mitigation and Monitoring Plan (HMMP).									
Biology	**NC-20 (NES BIO-19) Oak Tree Management.** Compliance with the Riverside County Oak Tree Management Guidelines will be required. An accurate depiction of all oak trees that are 2 inches diameter at breast height or larger within the Project site will be identified by a biologist and mapped. Impacts on all oak trees will be identified and quantified. If impacts on oak trees and their protected zones cannot be avoided, then a design that least impacts oak trees will be prepared. If oak trees are to be lost, the loss of oak trees will require mitigation, and an oak tree mitigation plan will be required to be prepared. At a minimum, the plan will include mitigation methods and options, requirements for replacement trees, and locations of mitigation sites.	Sections 2.4.1 and 2.4.4, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Project Biologist, Contractor (Implementation)						Yes
Biology	**AS-2 (NES BIO-25). Burrowing Owl Management Plan.** A Burrowing Owl Management Plan will be prepared by a qualified biologist and will include: a) Focused Survey for Burrowing Owl: Include within the plan the results of the MSHCP protocol survey conducted. The survey results shall be no more than 3 years old. The survey shall be performed according to the Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area (Survey Instructions). b) Preconstruction Survey for Burrowing Owl: Surveys by a qualified biologist shall be conducted in areas containing burrows and/or suitable habitat for burrowing owl within 14 days prior to ground disturbance, following the survey instructions in the "Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area." The Biological Study Area (BSA) shall be the LOD and a 500-foot BSA. c) Protocol for Presence: Take steps necessary for addressing the presence of burrowing owl (if found during either of the two surveys), which shall include proper take authorization and include full avoidance, if feasible, or passive relocation by a qualified biologist. d) Agency Approval: The plan will need approval by USFWS and CDFW. Additional approval of the plan will be required by RCA if RCA-owned lands are involved.	Section 2.4.4, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Project Biologist, Contractor (Implementation)						No
Biology	**AS-3 (BIO-26) Bat Management Plan.** A Bat Management Plan (Plan) will be prepared by a qualified biologist. Because bat exclusion activities require specific timing, it is recommended to begin bat pre-Project emergence surveys and planning in late spring/summer prior to construction. Both the hibernation season and the maternity season have restrictions, which introduce timing restrictions for bat exclusion activities, should these be required. These are briefly described below. • The hibernation season begins in November (November 1 through November 30), where exclusion is dependent upon	Section 2.4.4, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Project Biologist, Contractor (Implementation)						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	weather conditions and is at the bat biologist's discretion. If the low temperatures on the evening of exclusion and the subsequent four evenings are not forecasted to drop below 45°F, then the exclusion may occur. If the forecasted low temperatures are anticipated to be 45°F or less, then no exclusion will be performed. • During the hibernation season (December 1 through February 14), no exclusions will be performed. During the maternity season (April 1 through August 31), no bat exclusions will be performed to avoid "take" of flightless young. • From February 15 through March 31 and September 1 through October 31, bat exclusion generally has no timing constraints. The Plan will include the following requirements: a. A qualified bat biologist will conduct bat pre-Project emergence surveys at all bridges, culverts, or other significant features (within at least 150 feet of the Project) that show any potential for bat roosts if any disruptive construction work is expected to come within the suggested protective bat buffer distances for potential bat roosts at these sites. These buffer distances can be found in Table 7-1 of the 2019 Caltrans Bat Mitigation guide (H.T. Harvey 2019). Such locations include, but are not limited to, the potential bat roost structures identified in Figure 2.4.4-3. The field review will determine the level of survey needed to assess presence/absence of bats at each structure and will be performed in late spring/summer prior to construction. b. A qualified bat biologist will evaluate all mature trees, palm trees and fronds, and snags to be removed for their potential to support roosting bats. If potential bat roost sites are identified in trees to be removed, the removal will be conducted over a two-day period (two-step removal process). On day 1, the qualified biologist will identify branches and limbs without crevices or cavities to be removed using hand tools or chainsaws. On day 2, the remainder of the tree may be removed. • From February 15 through March 31 and September 1 through October 31, tree removal follows the 2-day process with no other constraints. • During the start of the hibernation season (November 1 through November 30), tree removal is dependent upon weather conditions and will be at the bat biologist's discretion. If the low temperatures on the evening of removal and the subsequent four evenings are not forecast to drop below 45°F, then the contractor may remove trees following the two-step removal process. If the forecasted low temperatures are anticipated to be 45°F or less, then no tree removal will be performed. • During the hibernation season (December 1 through February 14), no tree removal will be performed.									

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	• During the maternity season (April 1 through August 31), tree removal should be avoided to prevent "take" of flightless young. Tree removal can only be performed if a qualified bat biologist surveys all of the trees containing suitable bat roosting habitat to be removed and no roosting bats are found. These surveys will consist of acoustic detectors placed near each tree for 1 to 2 evenings (with data retrieved and analyzed), and emergence surveys will be conducted at trees where bat acoustic activity was recorded during the emergence period. If roosting bats are found, the tree cannot be removed until the end of the maternity season. c. Night lighting associated with construction will be directed away from bridges, palm trees, and other significant features determined by the qualified bat biologist to have potential for bats. In addition, night lighting will be directed away from areas of natural vegetation adjacent to the western side of southbound I-15 in the vicinity of the Cajalco Road Bridge, the Bedford Wash Bridges, the Weirick Road undercrossing, and the palm grove between these bridges. d. To minimize impacts on roosting bats, the Plan will require that no staging or storage of equipment or vehicles will occur under or on top of bridges with potential for bats. This will include, but is not limited to the Cajalco Road Bridge, Bedford Wash Bridges, and Weirick Road undercrossing. e. Preconstruction bat emergence surveys will be completed 14 days prior to construction by a qualified bat biologist, in coordination with the Caltrans biologists, within the Project area at all bridges, culverts, or other significant features that show any potential for bat roosts if any disruptive construction work is expected to come within the recommended disturbance buffer zones for potential bat roosts per Table 7-1 of the 2019 Caltrans Bat Mitigation guide (H.T. Harvey 2019) at these sites. Such locations include, but are not limited to, the Weirick Road undercrossing, the Cajalco Road OC bridges, the three Bedford Wash bridges, and the palm grove near Bedford Wash. If bats are detected, the qualified bat biologist will coordinate with the Caltrans biologist to determine if additional avoidance and minimization measures are needed. f. For bridges, culverts, or other significant features confirmed to be potentially suitable for bat roosting/nursery, exit counts and acoustic surveys will be performed to determine whether a structure supports a nursery or roost and by which species. This survey work will occur in the late spring/summer in the year prior to construction and potentially again in the fall in the year prior to construction, depending on the results of the summer work. This would be determined by the bat biologist. Where the timing for these surveys is not possible for every potential bat roost, the implementation of BIO-26, section “e” will be performed in									

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	lieu of these surveys if conditions (e.g., temperature) permit the feasibility of surveys at these sites at least 14 days prior to construction. g. For each location confirmed to be occupied by bats, the Plan will provide details both in text and graphically where exclusion devices will need to be placed, the timing for exclusion work, and the timeline and methodology needed to exclude the bats. h. Monitoring activities and schedule will be included in the Plan, including frequency of monitoring, which structures would need to be monitored, and reporting requirements. i. Details on placement of human-made roosting habitat panels, including design, placement location, and timing of placement will be included in the Plan. These panels must be placed at least 9 months prior to the exclusion of the bats. j. The draft Plan will be reviewed and approved by CDFW.									
Biology	**AS-5 (BIO-28) Nesting Bird Management Plan.** Due to the complexity of the Project at the Temescal Wash, as well as the presence of many bridges and mature trees along the Caltrans ROW, a Nesting Bird Management Plan (Plan) will be drafted to provide a comprehensive approach to handling nesting birds well prior to the commencement of construction. It will include, at a minimum, the following items: a. A qualified biologist will perform a detailed field review and document the location of raptor and/or corvid nests along with sign of colonial nesting birds within the LOD and adjacent lands. The colonial nesting bird review should be performed in conjunction with measure AS-3 (NES BIO-26). This field review should occur in late spring/early summer to provide the best results. b. Results of the field review will be used to draft approaches and survey methodologies for addressing potential nesting species. A single approach and methodology will not suffice for all species with potential to nest. This Plan should be coordinated with USFWS and CDFW with final approval being provided by both agencies. Below is a basic nesting bird survey method that can be incorporated into the document. At the very least, the Plan must provide assurance that birds protected under the Migratory Bird Treaty Act (MBTA) and similar protections under the California Fish and Game Code will not be harmed. c. Within 7 days prior to the commencement of construction activities (if between January 15 and September 1), a qualified biologist will perform a nesting bird and raptor survey that will consist of at least two site visits to each area with potential nesting habitat to determine whether there are active nests within 200 feet of the LOD. This survey will also identify the species, and to the degree feasible, nesting stage (e.g., incubation of young, feeding of young, near fledging). Nests will be mapped (not by using	Sections 2.4.4 and 2.4.5, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)	2023 SS Section: 14-6.03B					No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	GPS as close encroachment may cause nest abandonment). If active nests are found, construction will not occur within 200 feet of the nest, or as directed by a qualified biologist, until the nesting attempt has been completed and/or abandoned because of non-Project related reasons. d. If suitable habitat for LBV occurs within 300 feet of the construction area and it is within the LBV breeding season (March 15 through September 30), pre-construction surveys for LBV will occur by a qualified biologist. These surveys will occur once a week for 3 consecutive weeks during the breeding season, and the last survey will occur no more than 3 days prior to the start of construction. All detections of LBV will be tracked for behavior across all detections by a qualified biologist. After the completion of preconstruction surveys, weekly surveys will be performed. If at any time it is determined that construction activities are negatively affecting LBV, including behavior modification, work will be halted and CDFW and the USFWS will be contacted for next steps. i) Surveys will be conducted between dawn and 11:00 a.m. and not during inclement weather. ii) Surveys will not cover more than 2 miles or 123 acres of habitat per day. iii) Prior to performing surveys, a map will be created of all LBV habitat. During surveys, all LBV will be mapped and tracked. iv) Daily noise monitoring of LBV habitat adjacent to construction activities will occur, with a qualified biological monitor present to measure noise levels at the edge of all suitable LBV habitat. Work will cease if at any time noise levels exceed 60 dBA. Noise monitoring will continue throughout the breeding season or until construction activities have halted within 300 feet of LBV habitat. For areas where pre-construction ambient noise levels exceed 60 dB, pre-construction, ambient noise measurements can be taken by a qualified entity during the full daylight period (sunrise to sunset) and the median average ambient noise level can be used as the baseline in lieu of the 60 dBA. Where projects need to perform nighttime construction activities, the same would be done, but during the full nighttime period (sunset to sunrise). If the project is not able to reduce the noise, CDFW and USFWS can be contacted on next steps. Although not required, a temporary noise wall or noise blankets between the construction area and the LBV habitat can be constructed to avoid the indirect effects of noise on LBV and to reduce the construction halts. Even with the temporary noise wall, preconstruction surveys are required unless the USFWS and CDFW									

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	have confirmed in writing that the surveys are not required.									
Biology	**JPR-1**. **Invasive Species/Upland Temporary Impacts Measure.** For the duration of construction, any lands disturbed and left bare (i.e., not under active ground disturbance) for a period of 30 days or greater will be inspected by a qualified biologist for growth of non-native plant species listed as Moderate or High by the California Invasive Plant Council (Cal-IPC) (e.g., stinknet [*Oncosiphon pilulifer*], tocalote [*Centaurea melitensis*]). If detected, these species, with the exception of non-native grasses, shall be removed by a qualified landscape contractor with experience in native ecosystems by mechanical means (e.g., mowing, string trimming) or application of herbicide by a California licensed applicator within 5 days of detection. These removal efforts will focus on removal prior to seed setting/development. All material from species with a Cal-IPC rating of Moderate or High will be bagged, removed, and disposed of off site. Areas containing vegetation proposed as temporary impacts will be returned to pre-project or better condition upon completion of construction. A native seed mix appropriate to the vegetation community being impacted will be developed by a qualified biologist and reviewed and approved in writing by the RCA. Hydroseeding will occur during the first fall (September through October) following the completion of construction and would be subject to non-native plant control methods outlined above if left bare for a period of 30 days or greater prior to hydroseeding. The hydroseed mix must avoid use of invasive, non-native plant species listed in Table 6-2 of the MSHCP. These areas will be inspected by a qualified biologist for growth of non-native plant species listed as Moderate or High by Cal-IPC on a quarterly basis (June through January) and monthly during the growing season (approximately February through May) following hydroseeding. All species listed as Moderate or High by Cal-IPC will be removed following the methods outlined above. Maintenance/monitoring will cease once the absolute cover of native species reflects pre-project condition and absolute cover of vegetation within the temporary impact areas is equal to or better than pre-project condition. A memo will be provided to the RCA demonstrating completion (including photographs). These activities will be included in and implemented as part of the project construction schedule.	Joint Project Review, Project Information, a) Project Documentation	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)						No
	JPR-2. Riparian/Riverine Mitigation and Habitat Mitigation Monitoring Plan Measure. Permanent impacts on 1.06 acres of riparian/riverine resources will be offset at a 3:1 ratio, including establishment/re-establishment at a minimum 1:1 ratio and the remainder 2:1 ratio can be a combination of establishment/re-establishment and/or rehabilitation, through either (1) onsite permittee-responsible mitigation of riparian/riverine resources, (2) the purchase of establishment/re-establishment and/or rehabilitation credits	Joint Project Review, Other Plan Requirements, a) Riparian/Riverine	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)						Yes

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	from an approved mitigation bank within the MSHCP Plan Boundary (e.g., Riverpark Mitigation Bank), or (3) offsite permittee-responsible mitigation of riparian/riverine resources. If permittee-responsible mitigation will be the final mitigation strategy, a Habitat Mitigation and Monitoring Plan (HMMP) with success criteria will be drafted with review and approval by RCA and the Wildlife Agencies (i.e., California Department of Fish and Wildlife and United States Fish and Wildlife Service) obtained prior to construction to ensure selected mitigation is biologically equivalent or superior. Temporary impacts on 3.36 acres of riparian/riverine resources will be restored in place at a 1:1 ratio plus at a 0.25:1 ratio by the purchase of establishment/re-establishment credits from an approved mitigation bank within the MSHCP Plan Boundary (e.g., Riverpark Mitigation Bank) or through offsite permittee-responsible mitigation of riparian/riverine resources. Temporary impacts will be addressed in an HMMP with success criteria, which will be provided for review and approval by the RCA and Wildlife Agencies prior to ground disturbance activities. The project will complete construction in phases, and each phase area will be determined as project funding becomes available. Therefore, Riverside County Transportation Commission (RCTC) will not complete all mitigation requirements for the entire project prior to the initiation of construction of the project, but rather, will complete the mitigation requirements for each phase prior to construction of that phase. Once a phase area is defined, the required mitigation for MSHCP resources will be qualified and quantified based on the impacted riparian/riverine resources, as identified in these JPR findings, within that phase area. These details on project phases and required mitigation will be provided in a JPR addendum to the RCA and Wildlife Agencies prior to ground disturbance activities. If project impacts on MSHCP resources and mitigation strategies proposed differ from what is described in these JPR findings, an amendment to the JPR may be required.									
	JPR-3. Least Bell's Vireo Avoidance and Minimization Measure. To avoid indirect impacts, project construction and site preparation activities including but not limited to vegetation clearing and grubbing within 300 feet of least Bell's vireo habitat will be conducted outside of the least Bell's vireo breeding season (March 15 to September 30). This will require that a qualified biologist oversee the establishment of a highly visible and maintained 300-foot buffer. Maintenance of the buffer will be performed weekly, but more often if needed. If construction activities must occur during the breeding season, pre-construction surveys to determine if least Bell's vireo occurs within 300 feet of project construction will occur once a week for three consecutive weeks within the breeding season, with the last visit no more than 3 days prior to commencement of construction activities. The preconstruction survey visits will be conducted by a qualified biologist familiar	Joint Project Review, Other Plan Requirements, a) Riparian/Riverine	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	with songs, whisper songs, calls, scolds, and plumage characteristics of adult and juvenile vireos. Surveys will be conducted between dawn and 11:00 am. Surveys will not be conducted during periods of excessive or abnormal cold, heat, wind, rain, or other inclement weather that individually or collectively may reduce the likelihood of detection. Surveys will not cover more than 3 linear kilometers (2 miles) or more than 50 hectares (123 acres) of habitat on any given day. Prior to performing the preconstruction surveys, a map will be created illustrating the least Bell's vireo habitat and all detections of least Bell's vireo will be mapped and tracked. Directly following the preconstruction surveys, weekly clearance surveys will be performed following the same methodology stated above for the preconstruction surveys. Again, all detections of least Bell's vireo are to be mapped with behavior tracked across detections/sightings. The qualified biologist must have experience with nesting ecology and behavior of least Bell's vireo to determine pre-nesting/nesting behavior. The MSHCP does not provide "take" of least Bell's vireo which includes negatively modifying foraging and nesting behavior. If at any time it is determined by the qualified biologist that construction activities are negatively affecting least Bell's vireo, including modification of behavior, work will be halted and CDFW and USFWS will be contacted on next steps. Daily noise monitoring will be required during the breeding season. A qualified biological monitor must be present to measure noise levels at the edge of all suitable habitat and work shall cease if, at any time, noise levels exceed 60 dB due to construction activities, or the existing ambient level if that is over 60 dB. Noise monitoring will continue throughout the breeding season or until construction activities have halted within 300 feet of least Bell's vireo habitat. CDFW and USFWS can be contacted on next steps if the project is not able to reduce the noise. For areas where preconstruction ambient noise levels exceed 60 dB, pre-construction, ambient noise measurements can be taken by a qualified entity during the full daylight period (sunrise to sunset), and subsequently determine the median average ambient noise level that can be used as the baseline in lieu of 60 dB. For projects that need to perform nighttime construction activities the same would be done as above but with measurements taken during the full nighttime period (sunset to sunrise). Although not required, for some projects it may be useful to construct a temporary noise wall between the construction area and the habitat to maximize avoidance of indirect effects to least Bell's vireo and reduce potential for project halts. The preconstruction and clearance surveys will still be required to ensure full avoidance has been met by the project during the least Bell's vireo breeding season unless USFWS and CDFW have confirmed in writing that such surveys are not necessary.									

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Other	**GHG-2** The Project will incorporate the use of energy-efficient lighting.	Section 3.3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-3** Bids will be solicited that include use of energy and fuel-efficient fleets in accordance with current practices.	Section 3.3.4, EIR/EA	Yes	RCTC						Yes
Other	**GHG-6** Select Project features that minimize the need for irrigation and nonnative plants.	Section 3.3.4, EIR/EA	Yes	RCTC						Yes
Other	**GHG-7** Install urban planting/vegetation, especially canopy trees, to reduce “heat island” effects.	Section 3.3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-8** Incorporate native plants and vegetation to the Project design. Replace more vegetation than was removed to increase carbon sequestration.	Section 3.3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-9** Avoid an ultimate (new trees at projected maturity) net loss of tree canopy within the Project limits through a combination of preservation and new planting.	Section 3.3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-10** Include landscaping components such as mulch and compost application to improve carbon sequestration rates in soils and reduce organic waste.	Section 3.3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-11** During final design, a Life Cycle Cost Analysis (LCCA) will be performed, which will ensure long-life pavement structures will be designed to withstand the projected increase in ambient temperatures and changes in precipitation in the Project area as much as feasible. Specifically, adjustments will be made to the pavement binder and mix design specifications to better match expected future environmental conditions. Additionally, stiffer asphalt grades and slower-aging binders will be utilized as needed to address increased temperatures and projected temperature change, along with adjustments to the pavement structural design to account for temperature and climatic changes. Incorporation of design elements, like shorter joint spacing and others, will occur to reduce damage from high temperatures. Concrete pavements will be designed to limit moisture damage and shrinkage as much as feasible.	Section 3.3.4, EIR/EA	Yes	RCTC (Preparation), Resident Engineer, Contractor (Implementation)						Yes
Air Quality	**AQ-5** To offset construction emissions from the Project, promote travel-mode shift, and reduce bus travel times, RCTC will develop a program prior to Express Lanes being open to travel that includes the establishment of the Riverside County Free Rail Pass Program and the expansion of the Riverside Transit Agency’s (RTA’s) CommuterLink Route 206. The Riverside County Free Rail Pass Program is a 2-year program that launched in March 2025 and offers temporary free Metrolink passes to Riverside County residents to reduce the cost of using public transportation in order to encourage residents to use public transportation more often on a permanent basis. This program includes public outreach efforts that maximize the participation of disadvantaged and low-income populations to encourage transit use. If additional funding becomes available, RCTC will extend this program beyond the current funding of 2 years.	Sections 2.2.1, 2.2.5, 2.2.6, 3.1.3, 3.1.8, 3.1.11, 3.1.21, and 3.3.3, EIR/EA	Yes	RCTC						Yes

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	This measure will help offset construction emissions from the Project. RCTC will work with RTA to improve and potentially expand RTA's existing CommuterLink bus service, which currently operates along I-15 between Temecula and Corona. At a minimum, RTA buses will be permitted to utilize the Express Lanes at no cost within the Project limits upon the opening of the Project.									

ROW/PURCHASING

No avoidance, minimization, or mitigation measures would be implemented during the Right of Way/Purchasing phase of the Project.

PRE-CONSTRUCTION

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Utilities	**UT-2** Prior to grading activities, RCTC's resident engineer or designated contractor will require the designated contractor to notify Underground Service Alert (USA), at least 2 days prior to excavation, by calling 811 to require that all utility owners within the Project disturbance limit identify the locations of underground transmission lines and other utility facilities.	Section 2.2.7, EIR/EA	Yes	RCTC, Resident Engineer						No
Cultural Resources	**CR-3 Environmentally Sensitive Areas** The establishment of ESAs and barriers within and adjacent to archaeological sites P 33 000108, P-33-000630, P-33-001099, and P-33-002992 shall protect elements of these resources in place for the duration of the Project. The ESAs will be marked on plans and delineated in the field by a Caltrans archaeologist. No excavation or subsurface ground disturbance will occur within the delineated ESA. In addition, construction personnel will be informed of historic preservation laws that protect archaeological sites against any disturbance or removal of artifacts.	Section 2.2.10, EIR/EA	Yes	RCTC, Caltrans District 8 Archaeologist, Resident Engineer, Contractor	2023 SS Section: 14-1.02, 16-2.03					No
Water Quality	**WQ-4 Batch Plant.** If a batch plant or crushing plant is needed for this Project and will be located off site or within the state right-of-way, then RCTC will obtain coverage under the Industrial NPDES permit, Order No. 2014-0057-DWQ, CAS000001, to address discharges from these manufacturing facilities. Hazardous Waste	**HW-5 Construction Health and Safety Plan.** Prior to construction, RCTC's resident engineer or designated contractor will ensure the development of a Health and Safety Plan (HASP) to be implemented during	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	construction activities. A Certified Industrial Hygienist will review this plan, based on evaluations of proposed construction activities, the potential hazards identified in this report, and any future assessment prepared for the Project. This plan will contain specific procedures for encountering expected and unexpected contaminants, including silica sand associated with the Coronita Ranch Sand Deposit site. It will prescribe safe work practices, contaminant monitoring, personal protective equipment, emergency response procedures, and safety training requirements to protect construction workers and third parties. The plan will meet the requirements of 29 Code of Federal Regulations 1910 and 1926, and all other applicable federal, state, and local regulations and requirements. The designated contractor will be responsible for preparing the HASP before the start of construction.									
Hazardous Waste	**HW-6 Contaminated Media Management Plan.** Prior to construction, RCTC's resident engineer or designated contractor will ensure the preparation of a Contaminated Media Management Plan (CMMP). This plan will include procedures for contaminant monitoring and identification, temporary storage, handling, treatment, and disposal of waste and materials (including soil), in accordance with applicable federal, state, and local regulations and requirements. The designated contractor will be responsible for preparing the CMMP before the start of construction.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-11, 14-11.13					No
Hazardous Waste	**HW-7 Construction Contingency Plan.** Prior to construction, RCTC's resident engineer will ensure the preparation of a Construction Contingency Plan (CCP), in accordance with the guidance provided in Chapter 7-107 of the Caltrans Construction Manual for handling and dealing with unknown hazards (see Figure 7-1.1 of the Caltrans Construction Manual for Caltrans Unknown Hazards Procedure). This plan will include provisions for responding to events such as the discovery of unidentified underground storage tanks (UST), hazardous materials, petroleum hydrocarbons, or hazardous or solid wastes during construction. This plan will address UST decommissioning, field screening, and material testing methods; mitigation and contaminant management requirements; and health and safety requirements for construction workers. If an unexpected release of hazardous substances is found in reportable quantities, the National Response Center must be notified by calling 1-800-424-8802, and cleanup must be coordinated with environmental agencies. The designated contractor will be responsible for preparing the CCP before the start of construction.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Biology	**NC-1 (NES BIO-1) Vegetation Clearing Restrictions.** Clearing of natural vegetation (including sage scrub) will be performed outside of the active breeding season for birds, as defined in the MSHCP (March 1 through June 30) (MSHCP Volume I, Section 7.5.3), except for Riversidian Sage Scrub (RSS) (including disturbed) judged to be potentially suitable habitat for (and/or occupied by) coastal California gnatcatcher and within MSHCP Criteria Areas. For these areas, the habitat removal restriction is extended from June 30 to August 15. If gnatcatcher breeding season avoidance is not possible, protocol-level focused surveys for coastal California gnatcatcher, consistent with the USFWS survey guidelines, would be performed prior to any vegetation removal or other site disturbance. If the species is found, vegetation clearing will be avoided until after August 15. In addition, for riparian/riverine vegetation occupied by least Bell's vireo (LBV), vegetation removal cannot occur through September 15. Table 2.4.1 5 summarizes the locations of (1) natural vegetation communities within the LOD that have the March 1 through June 30 restriction, (2) sage scrub with the June 30 and the August 15 clearing restriction, and (3) riparian/riverine vegetation with a clearing restriction through September 15 (refer to Figure 2.4.1 2 for an illustration of these vegetation communities).	Sections 2.4.1, 2.4.2, 2.4.3, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor	2023 SS Section: 14-6.03B					No
Biology	**NC-13 (NES BIO-13) LODs and ESAs.** The LODs, including the upstream, downstream, and lateral extents on either side of any stream adjacent to the Project's LOD, will be clearly defined and marked in the field. Biological monitors will review the LODs prior to initiation of construction activities (MSHCP Volume I, Section 7.5.3, and MSHCP Volume I, Appendix C). ESA fencing will be installed during construction to ensure avoidance of jurisdictional areas and riparian habitat.	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Other	**Caltrans Standard Specifications Section: 7-1.02M(2) Fire Prevention** The contractor shall comply with all requirements stated in Caltrans Standard Specifications Section 7-1.02M(2). The contractor shall ensure that emergency contact information for the California Department of Forestry and Fire Protection unit headquarters, the U.S. Forest Service ranger district office, and the Bureau of Land Management field office are obtained, distributed, and posted throughout the job site as required. The contractor shall ensure that Hydrocarbon-fueled engines, both stationary and mobile, are equipped with spark arresters per Public Resources Code Section 4442, excluding exempted vehicles stated in Caltrans Standard Specification 7-1.02M(2). The contractor shall follow requirements regarding ashtrays, flammable materials, and clear and grub activities. The contractor shall have all fire equipment	Section 3.3, Wildfire EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 7-1.02M(2)					No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	listed in Caltrans Standard Specification 7-1.02M(2) readily available on the job site. The contractor must furnish a pickup truck and driver that would be available for fire control during working hours. The pickup truck and operator must patrol the construction area for at least a half-hour after job site activities have ended. In addition to being available, the truck and operator must patrol the area of construction from noon until at least a half-hour after job site activities have ended. If the fire danger rating is “very high” or “extreme” per the California Department of Forestry and Fire Protection, the U.S. Forest Service, and the Bureau of Land Management class ratings, or if a “fire weather watch” or “red flag warning” is issued, the truck and operator must patrol the construction area while work is being done and for at least a half-hour after job site activities have ended. The contractor shall follow the protocol outlined in Caltrans Standard Specifications Section: 7-1.02M(2) when the fire danger rating is "very high" or "extreme." The engineer may suspend work wholly or in part due to hazardous fire conditions. The days during this suspension would be non-working days. If field and weather conditions become such that the work is suspended, Caltrans Standard Specifications Section 7-1.02M(2) would not be enforced for the period of the suspension.									

CONSTRUCTION

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Other	**FIRE-1** To minimize risk of fires during construction activities, RCTC’s resident engineer or designated contractor will ensure the implementation of the following minimization measures: a. Coordinate with CALFIRE and local fire departments to identify and maintain defensible spaces around active construction areas. b. Coordinate with CALFIRE and local fire departments to identify and maintain firefighting equipment (e.g., extinguishers, shovels, water tankers) in active construction areas. c. Post emergency services phone numbers (i.e., fire, emergency medical, police) in visible locations in all active construction areas.	Section 2.2.7, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Other	**UT-1** During construction, RCTC’s resident engineer or designated contractor will ensure that all public utility lines, pipes, and cables within the Project limits continue to meet the needs of residents and businesses in the community. In addition, arrangements must be made to avoid disruption of utility services. If interruption in service is unavoidable, notice must be given and proper arrangements will be made with residents and businesses.	Section 2.2.7, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Cultural Resources	**CR-1 Unanticipated Discoveries** If cultural materials are discovered during construction, all earthmoving activity within 60 feet of the discovery area will be diverted until a qualified archaeologist can assess the nature and significance of the find.	Section 2.2.10, EIR/EA	Yes	RCTC, Project Archaeologist, Resident Engineer, Contractor	2023 SS Section: 14-1.02, 14-2.03A					No
Cultural Resources	**CR-2 Human Remains** If human remains are discovered, State Health and Safety Code Section 7050.5 states that further disturbances and activities shall cease in any area or nearby area suspected to overlie remains, and the county coroner contacted. Pursuant to Public Resources Code Section 5097.98, if the remains are thought to be Native American, the coroner will notify the Native American Heritage Commission (NAHC), which will then notify the Most Likely Descendant (MLD). At this time, the person who discovered the remains will contact the District 8 Native American Coordinator Julie Scrivner at (909) 260-8265 so that he may work with the MLD on the respectful treatment and disposition of the remains. Further provisions of PRC Section 5097.98 are to be followed as applicable.	Section 2.2.10, EIR/EA	Yes	RCTC, Project Archaeologist, Caltrans Native American Coordinator, Resident Engineer, Contractor	2023 SS Section: 14-2.03A					No
Cultural Resources	**CR-4 The Establishment of Archaeological Monitoring Areas** Archaeological monitor(s) as assigned by Caltrans shall monitor all ground-disturbing construction-related activities within AMAs that have been established within or adjacent to archaeological sites P-33-000108, P-33-000630, P-33-001099, and P-33-00292. The Resident Engineer will notify Caltrans' Professionally Qualified Staff (PQS) Principal Investigator or equivalent PQS consultant Principal Investigator (archaeological monitor) at least two weeks in advance of construction to ensure that they will be available to monitor and review the ESA boundary protection. A construction schedule will be provided. The engineer and the archaeological monitor will conduct a field review at least 5 business days before the start of job-site activities. The archaeological monitor will monitor ground-disturbing activities within the AMA; a Native American monitor may also be present. If the ESA is breached, the archaeological monitor will have the authority to immediately: 1. Stop all work within 60 feet of the ESA boundary. 2. Secure the area. 3. Notify the engineer. Upon completion of construction, the Caltrans PQS archaeologist or equivalent PQS consultant archaeologist will remove the fencing and fill any post holes with soil removed during the installation of clean fill. An Archaeological Monitoring Report will be completed detailing the results of the monitoring efforts when the monitoring effort has been terminated.	Section 2.2.10, EIR/EA	Yes	RCTC, Caltrans Archaeologist, Project Archaeologist, Resident Engineer, Contractor	2023 SS Section: 14-2.03B, 16-2.03					No
Water Quality	**WQ-1 Comply with Construction General Permit.** During construction, the Riverside County Transportation Commission (RCTC) will ensure that the Project is in compliance with the requirements prescribed in the Caltrans NPDES Statewide Stormwater Permit (Order 2022-0033-DWQ, NPDES No. CAS000003, adopted September 22, 2022 and effective January 1, 2023), the NPDES General Permit for Stormwater Discharges of Stormwater Runoff Associated with Construction Activities (Order WQ 2022-0057-DWQ, adopted September 8, 2022 and effective September 1, 2023), and any subsequent permit in effect at the time of construction.	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 13-1.01D(2)					No
Water Quality	**WQ-3 Water Quality Monitoring During Construction.** As a requirement of a Risk Level 2, RCTC will ensure that water quality will be monitored by including a Stormwater Annual Report and a Sampling and Analysis Plan as directed by the Construction General Permit.	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 13-3.01C(2)(b) and 13-3.01C(2)(b)(ii)					No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Water Quality	**WQ-5 Dewatering.** During construction, RCTC will ensure that construction site dewatering will comply with the General Waste Discharge Requirements for Discharges to Surface Waters That Pose an Insignificant (de minimis) Threat to Water Quality (Order No. R8-2015-0004, NPDES No. CAG998001) and any subsequent updates to the permit at the time of construction. This permit addresses temporary dewatering operations during construction. Dewatering BMPs will be used to control sediment and pollutants, and the discharges will comply with the WDRs issued by the SARWQCB.	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Water Quality	**WQ-6 Treatment Prevention BMPs.** Post-construction, RCTC will ensure that Caltrans approved treatment BMPs will be implemented and will operate as designed, consistent with the requirements of NPDES Permit and WDRs for Caltrans Order No. 2022-0033-DWQ, NPDES No. CAS000003, (adopted September 22, 2022 and effective January 1, 2023), and any subsequent permits in effect at the time of construction. Treatment BMPs will be limited to Caltrans-approved list of treatment BMPs and trash capturing devices, and they will treat 100 percent of the Water Quality Volume of the PCTA.	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Water Quality	**WQ-7 Design Pollution Prevention BMPs.** Post-construction, RCTC will ensure that design pollution prevention BMPs are implemented. These BMPs will include, but are not limited to, preserving existing vegetation and slope/surface protection systems (benching/terracing, slope rounding, and reducing gradients [incorporate 4:1 slopes or flatter]).	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Water Quality	**WQ-8 Maintenance BMPs.** Post-construction, RCTC will ensure that maintenance BMPs will be implemented. These BMPs will include, but are not limited to, drain inlet stenciling, treatment BMP marker panels, and any others identified by the Caltrans Maintenance Department and consistent with those shown in the Project Planning and Design Guide (Caltrans 2019) and Maintenance Manual (Caltrans 2017).	Section 2.3.2, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Hazardous Waste	**HW-2 Treated Wood Waste.** Wooden guardrail posts may contain creosote and pentachlorophenol. During construction, RCTC's resident engineer or designated contractor will ensure that treated wood objects are handled as treated wood waste and managed per Chapter 34, Title 22 California Code of Regulations Sections 67386.1 through 67386.12, "Alternative Management Standards for Treated Wood Waste," and in accordance with Caltrans Standard Specifications, Section 14-11.14 Treated Wood Waste. All treated wood waste (TWW) should be properly disposed at a landfill permitted to accept TWW.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-11.14					No
Hazardous Waste	**HW-3 Paint and Thermoplastic Striping.** Paint used for traffic striping and pavement marking may contain lead chromate. During construction, RCTC's resident engineer or designated contractor will ensure that sampling, analysis, removal, and disposal of any traffic striping and pavement materials will be completed in accordance with Construction Program Procedure Bulletin 99 2, and Caltrans Standard Specifications, Section 14-11.12. Removal of Yellow Traffic Stripe and Pavement Marking with Hazardous Waste Residue and Section 36-4 Residue Containing Lead from Paint and Thermoplastic (2018) and be consistent with the requirements within Caltrans Construction Manual, Chapter 7-107E Removing Yellow Traffic Stripe and Pavement Marking with Hazardous Waste Residue (2019). Before disposal, the contractor is required to sample the removed material for proper waste classification. Yellow traffic stripe and pavement marking that is characterized as hazardous waste requires disposal to a Department of Toxic Substances Control permitted Class I disposal facility.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-11.12, 36-4					No
Hazardous Waste	**HW-4 Construction Generated Hazardous Waste.** Construction of the proposed Project may generate hazardous waste. Hazardous wastes generated during construction of the proposed Project would require disposal and could include used oil (not hazardous), sediment from vehicle washing, petroleum materials, cleaning solvents, and paint. RCTC's resident engineer or designated contractor will ensure that all hazardous waste generated during construction will be handled, stored, and disposed of in accordance with Caltrans Standard Specifications, Section 7-107A of the Construction Manual.	Section 2.3.5, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-11, 14-11.13					No
Air Quality	**AQ-1** During clearing, grading, earthmoving, or excavation operations, fugitive dust emissions be controlled by regular watering or other dust preventive measures using the following procedures, as specified in South Coast Air Quality Management District (SCAQMD) Rule 403. All material excavated or graded will be sufficiently watered to prevent excessive amounts of dust. Watering will occur at least twice daily with complete coverage, preferably in the late morning and after work is done for the day. All material transported on site or off site will be either sufficiently watered or securely covered to prevent excessive amounts of dust. The areas disturbed by clearing, grading, earthmoving, or	Section 2.3.6, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	excavation operations will be minimized so as to prevent excessive amounts of dust. These control techniques will be indicated in project specifications. Visible dust beyond the property line emanating from the project will be prevented to the maximum extent feasible.									
Air Quality	**AQ-2** Project grading plans will show the duration of construction. Ozone precursor emissions from construction equipment vehicles will be controlled by maintaining equipment engines in good condition and in proper tune per manufacturers' specifications.	Section 2.3.6, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Air Quality	**AQ-3** All trucks that are to haul excavated or graded material on site will comply with State Vehicle Code Section 23114, with special attention to Sections 23114(b)(F), (e)(2), and (e)(4), as amended, regarding the prevention of such material spilling onto public streets and roads.	Section 2.3.6, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Air Quality	**AQ-4** The contractor will adhere to Caltrans Standard Specifications for Construction (Section 14-9.02) that specifically requires compliance by the contractor with all applicable laws and regulations related to air quality, including air pollution control district and air quality management district regulations and local ordinances.	Section 2.3.6, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-9.02					No
Noise	**N-1** The contractor will implement appropriate noise reduction measures to minimize temporary noise impacts, including changing the location of stationary construction equipment, turning off idling equipment during construction activities, rescheduling construction activities as necessary to be in conformance with applicable requirements, notifying adjacent residents in advance of construction work, and installing acoustic barriers around stationary construction noise sources as necessary in conformance with applicable requirements. To further minimize construction noise impacts on adjacent sensitive land uses, the contractor will ensure that noise levels from contractor operations, between the hours of 9:00 p.m. and 6:00 a.m., do not exceed 86 dBA Lmax at a distance of 50 feet from the job site, in accordance with Caltrans Standard Specifications Section 14-8.02 and Standard Special Provision 14-8.02.	Section 2.3.7, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-8.02					No
Other	**EN-1** The contractor will adhere to Caltrans Standard Specifications for Solid Waste Disposal and Recycling (Section 14-10) and Disposal Documentation (Section 14-11.13B(6)).	Sections 2.2.1 and 2.3.8, EIR/EA	Yes	RCTC, Resident Engineer, Contractor	2023 SS Section: 14-10, 14-11.13B(6)					No
Other	**EN-2** Light fixtures and traffic signals will be replaced or installed with highly efficient light-emitting diodes (LEDs), including toll pricing signs.	Section 2.3.8, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						No
Biology	**NC-2 (NES BIO-2) Dust Control**. Active construction areas will be watered regularly to control dust and thus minimize impacts on adjacent vegetation (MSHCP Volume I, Section 7.5.3).	Sections 2.4.1 and 2.4.6, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-3 (NES BIO-3) Fire Suppression.** When work is conducted during the fire season (as identified by the Riverside County Fire Department) adjacent to RSS (Figure 2.4.1 2), appropriate firefighting equipment (e.g., extinguishers, shovels, water tankers) will be available on the Project site during all phases of Project construction to help minimize the chance of human-caused wildfires. Shields, protective mats, and/or other fire preventative methods will be used during grinding, welding, and other spark-inducing activities. Personnel trained in fire hazards, preventative actions, and responses to fires will advise contractors regarding fire risk from all construction-related activities (MSHCP Volume I, Section 7.5.3).	Sections 2.4.1, 2.4.6, and 3.2, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-4 (NES BIO-4) Biological Training.** A qualified biologist will conduct a training session for Project and construction personnel (MSHCP Volume I, Section 7.5.3) prior to grading. The training will include a description of the species of concern and their habitats, the general provisions of the Endangered Species Acts (FESA and CESA) and the MSHCP,	Section 2.4.1, EIR/EA	Yes	RCTC, Project Biologist, Resident						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	the need to adhere to the provisions of the acts and the MSHCP, the penalties associated with violating the provisions of the acts, the general measures that are being implemented to conserve the species of concern as they relate to the Project, and the access routes to and Project site boundaries within which the Project activities must be accomplished (MSHCP Volume I, Appendix C). All sensitive areas will be fenced as presented in Avoidance and Minimization Measure NC-6 (NES BIO-6), Construction and Project Limits, below.			Engineer, Contractor						
Biology	**NC-5 (NES BIO-5) Biological Monitoring.** The qualified Project Biologist will monitor construction activities for the duration of the Project to ensure that practicable measures are being employed and avoid incidental disturbance of habitat and species of concern outside the LOD (MSHCP Volume I, Section 7.5.3). Special attention will be provided to ensure that the environmentally sensitive area (ESA) fencing required in Avoidance and Minimization Measure NC-6 (NES BIO-6), Construction and Project Limits, is maintained daily. Additionally, ongoing monitoring and reporting will occur for the duration of the construction activity to ensure implementation of BMPs. This will be done in concert with Avoidance and Minimization Measure NC-6 (NES BIO-6), Construction and Project Limits, below, which includes the fencing of sensitive areas.	Sections 2.4.1, and 2.4.6, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-6 (NES BIO-6) Construction and Project Limits.** Construction personnel will strictly limit their activities, vehicles, equipment, and construction materials to the proposed LOD and designated staging areas and routes of travel. The construction area(s) will be the minimal area necessary to complete the Project and will be specified in the construction plans. Construction limits adjacent to sensitive resource areas will be demarcated using ESA fencing (e.g., orange snow screen). ESA fencing will be installed where sensitive biological resources have been identified by a qualified biologist. ESA fencing will be reviewed at least weekly by the biological monitor (as indicated in Avoidance and Minimization Measure NC-5 [NES BIO-5], Biological Monitoring) until the completion of all construction activities. Employees will be instructed that their activities are restricted to the construction areas (MSHCP Volume I, Appendix C). Access to sites will be from pre-existing access routes to the greatest extent possible (MSHCP Volume I, Section 7.5.3, and MSHCP Volume I, Appendix C).	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-7 (NES BIO-7) Exotic Species.** Exotic plant species removed during construction will be properly handled to prevent sprouting or regrowth (MSHCP Volume I, Section 7.5.3). Exotic wildlife species that prey upon or displace target species of concern should be permanently removed from the site to the extent feasible (MSHCP Volume I, Appendix C). Development adjacent to the MSHCP Conservation Area will not use the plant species listed in Table 6-2 of the MSHCP, Volume I. The applicability of this list will consider the proximity of the planting area to the MSHCP Conservation Areas, species considered in the planting plans, resources to be protected within the MSHCP Conservation Area and their relative sensitivity to invasion, and barriers to plant and seed dispersal, such as walls, topography, and other features.	Section 2.4.1, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-8 (NES BIO-8) Equipment Cleaning.** Construction equipment will be cleaned of mud or other debris that may contain invasive plants and/or seeds and inspected to reduce the potential of spreading noxious weeds before mobilizing to the site and before leaving the site during the course of construction. The cleaning of equipment will occur off site.	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-9 (NES BIO-9) Minimizing Disturbance.** The removal of native vegetation will be avoided and minimized to the maximum extent practicable. Temporary impacts will be returned to pre-existing contours and revegetated with appropriate native species (MSHCP Volume I, Appendix C). Vegetation will be covered while being carried on trucks, and vegetation materials removed from the site will be disposed of in accordance with applicable laws and regulations.	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-11 (NES BIO-11) Access.** The permittee (in this case, Caltrans and Riverside County Transportation Commission) will have the right to access and inspect any sites of approved projects for compliance with Project approval conditions, including BMPs (MSHCP Volume I, Appendix C).	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Biology	**NC-14 (NES BIO-14) MSHCP Covered Species Avoidance.** During construction, the placement of equipment within a stream or on adjacent banks or adjacent upland habitats occupied by MSHCP covered species that are outside of the Project's LOD will be avoided (MSHCP Volume I, Section 7.5.3, and MSHCP Volume I, Appendix C).	Sections 2.4.1, 2.4.4, 2.4.5, and 2.4.6, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**NC-16 (NES BIO-16). Riparian/Riverine Compensation.** Compensation for permanent impacts on riparian/riverine resources (including permanent shading) will occur as a combination of re-establishment and/or establishment, and potentially a component of rehabilitation, all of which will be at an equivalent or superior value at a ratio that achieves no net loss of riparian/riverine resources and wetlands.[2] Compensation can occur through permittee-responsible mitigation and/or other approved mitigation provider (measure **NC-17 [NES BIO-17]**) having equivalent or superior riparian/riverine resources and located in the vicinity of the Project. A mitigation ratio of 3:1 is proposed for permanent impacts on riparian resources, and 2:1 is proposed for permanent impacts on riverine resources, with a ratio of a minimum of 1:1 of the 3:1(or 2:1 as appropriate) as re-establishment or establishment. These ratios, along with in-kind offsite mitigation, will ensure no net loss of these habitats. Mitigation for all riparian/riverine resources will be biologically superior or equivalent to resources that are to be altered on site. The temporary impacts on riparian/riverine resources may be replaced through restoration of the temporarily affected area to pre-Project conditions, at a ratio of 1.25:1 and through permittee-responsible mitigation or other approved mitigation program. All temporary impacts would be replaced in kind or better at their current locations following preparation of both a Restoration Plan and an HMMP that would be reviewed and approved by the RCA and wildlife agencies prior to Project implementation. During restoration of riparian/riverine resources, no plant species listed in Table 6-2 of MSHCP Volume I will be planted within or adjacent to these resources. Details of the compensation for riparian/riverine resources will be provided in the DBESP (measure **NC-13 [NES BIO-13]**). Once the offsite mitigation location has been identified, a functions and values assessment will be performed to evaluate the equivalency of the resources to ensure that the requirement of biologically equivalent or superior preservation is met. The equivalency analysis will include addressing how mitigation will replace permanently altered functions and values, potential altered connectivity to downstream MSHCP resources, temporal impacts, and onsite restoration. The equivalency analysis will be reviewed and approved by RCA and the wildlife agencies prior to construction. In addition, refer to measure **TE-3 (NES BIO-23)** below for more details on LBV compensatory mitigation.	Sections 2.4.1, 2.4.2, and 2.4.4 EIR/EA	Yes	RCTC						Yes
Biology	**NC-18 (NES BIO-20). Wildlife Undercrossings.** In portions of the MSHCP Conservation Area that are assembled to provide for wildlife movement or where there is known wildlife movement, the permittee is required to maintain functionality of wildlife crossings to comply with Section 7.5.3 of the MSHCP. The following crossings were identified as described in the MSHCP to be included in the MSHCP Conservation Area to provide wildlife movement and where direct impacts from the Project are anticipated: • Indian Truck Trail (PM 30.41): MSHCP Proposed Constrained Linkage 3 • Indian Wash, Jurisdictional Feature 30.0-1 (PM 30.09): MSHCP Proposed Linkage 1 • Horsethief Canyon Wash, Jurisdictional Feature 29.1-1 (PM 29.13): MSHCP Proposed Constrained Linkage 5 • Horsethief Canyon Road (PM 28.88): MSHCP Proposed Constrained Linkage 5 • Temescal Wash (south crossing), Jurisdictional Feature 28.1-1 (PM 28.04): Proposed Constrained Linkage 6 • Lake Street (PM 26.69): Proposed Core 1 (linking north and south I-15) • Gavilan Wash/Alberhill Creek, Jurisdictional Feature 25.5-1 (PM 25.54): Proposed Core 1 (linking east and west of I-15)	Sections 2.4.1, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No

[2] Mitigation ratios may differ based on the location of riparian/riverine resources within the LOD. For example, riparian habitat within Temescal Wash may be mitigated at a higher ratio due to the quality of functions and values for wildlife movement, "live-in" habitat for sensitive species (i.e., LBV), and water quality functions.

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	• Jurisdictional Features 25.3-3/25.3-4 (PM 25.38); Proposed Core 1 (linking east and west of I-15) • Jurisdictional Features 25.3-1/25.3-2 (PM 25.32): Proposed Core 1 (linking east and west of I-15) To maintain functionality at these wildlife crossings, the following will apply: Prior to construction, a Wildlife Crossing Plan to address potential modifications in wildlife movement at the above-identified wildlife crossings during construction will be prepared by a qualified biologist. The Wildlife Crossing Plan will be based on the information provided in the MSHCP Consistency Analysis (consistent with Section 6.6.2 (E [2]) of the MSHCP). The plan will evaluate and provide requirements that may be considered, such as: • Construction work windows (seasonal and daily) (consistent with **BIO-1**, Vegetation Clearing Restrictions) • Construction fencing requirements to provide movement through the wildlife crossing outside of work areas (generally single-span underpasses will maintain one large, open passage area and bridges with multiple spans will have multiple open passage areas during construction) • Size of the opening(s): o A minimum width of 10 feet of crossing opening will be maintained at all times at Indian Truck Trail and Horsethief Canyon Wash, and Horsethief Canyon Road. • Restricted work areas (consistent with **BIO-6**, Construction and Project Limits, and **BIO-9**, Minimizing Disturbance) • Noise and light requirements (consistent with **BIO-18,** Lighting and Signage, **AES-4,** Lighting and Signage**, BIO-21,** Temescal Wash – Nesting Season Noise Requirements, **BIO-22,** Temescal Wash – Biological Monitoring, and Caltrans Standard Specification Section: 14-8.02 Noise Control) o A qualified biologist will confirm that night lighting is not entering the MSHCP Conservation Areas • Noise abatement during construction, maintaining noise levels within the crossing area below 100 dBA during sensitive crossing periods and/or in sensitive crossing areas, at the discretion of the qualified biologist • Treatment of edge effects (toxics, runoff [consistent with **BIO-12**, Water Pollution and Erosion Plans], invasive species avoidance [consistent with **BIO-7**, Exotic Species, and **BIO-8**, Equipment Cleaning], night lighting [consistent with **BIO-18**, Night Lighting Management]) • If it is determined that the natural dry ledges are insufficient during periods of inundation for wildlife movement, then this will be re-evaluated and artificial ledges may be required The biological monitor (**BIO-5,** Biological Monitoring) will ensure that the requirements in the Wildlife Crossing Plan are implemented during construction. Wherever temporary disturbances occur to riparian/riverine areas, onsite restoration is proposed per **BIO-16,** Riparian/Riverine Compensation and **BIO-17,** Aquatic Resource Compensatory Mitigation). Temporary impacts are anticipated at all of the above aquatic crossings. A qualified biologist will review the Habitat Mitigation and Monitoring Plan (HMMP) required to be prepared (**BIO-16** and **BIO-17**) for the above-identified wildlife crossings in drainages and will assist in designing revegetation efforts relative to existing conditions, with designs such as using tree and shrubs around crossing entrances, compliant with jurisdiction design requirements, to support the wildlife in the crossing by efforts that may be considered, such as: • Installing vegetation to guide wildlife to the crossings • Providing protection for small mammals and cover for predatory species, such as mountain lion or bobcat, leading up to crossings • Ensuring revegetation mimics the surrounding natural wildlife crossing area using native species • Providing vegetation buffers to reduce noise effects on wildlife approaching the crossing • No artificial lighting will be added to wildlife crossing structures. • Treatment and management of edge effects such as lighting (consistent with **BIO-18**, Night Lighting Management), runoff, toxics (consistent with **BIO-12**, Water Pollution and Erosion Plans, **WQ-2**, Prepare a Storm Water Pollution Prevention Plan, **WQ-3**, Water Quality Monitoring During Construction, **WQ-6**, Treatment Prevention BMPs and **WQ-**									

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	7, Design Pollution Prevention BMPs and **WQ-8**, Maintenance BMPs), and invasive species (consistent with **BIO-7**, Exotic Species, and **BIO-8**, Equipment Cleaning), as described in the Avoidance and Minimization Measures, will apply to wildlife crossings. Shading is anticipated to be increased at several of the wildlife crossings through the widening of the dual bridges to fill the existing gaps between the bridges to support the new lanes of road. Modifying the length of the crossing by increasing the length decreases the openness ratio. During bridge modifications, the openness ratio of any of the above-identified modified wildlife crossings will not be reduced to less than 0.6. In crossings not identified above, wherever possible, open areas will be maintained for wildlife to cross during construction to serve as alternate crossings. Wildlife fencing, if determined to be required by the qualified biologist preparing the Wildlife Crossing Plan, would be designed to encourage animals to use the crossing and prevent access to the road. Wildlife jump outs (to allow wildlife to exit the road if wildlife becomes trapped in the roadway) may be preferrable to one-way access gates for wildlife due to maintenance issues. If fencing is to be installed, it would require a fine mesh at the bottom to direct small animals into the crossing and prevent wildlife from entering I-15.									
Biology	**NC-19 (NES BIO-24) Waste Management.** To avoid attracting predators of special-status species, the Project site will be kept as clean of debris as possible. All food-related trash items will be enclosed in sealed containers and regularly removed from the site(s) (MSHCP Volume I, Appendix C). Waste, dirt, rubble, or trash will not be deposited in the Conservation Area or on native habitat (MSHCP Volume I, Section 7.5.3).	Sections 2.4.1, 2.4.2, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**WET-1 (BIO-22) Temescal Wash – Biological Monitoring.** A qualified monitor will be present during all construction phase work occurring in or within surface waters that are within 300 feet of Temescal Wash and its tributaries.	Sections 2.4.2, 2.4.4, and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**AS-1 (NES BIO-18) Night Lighting Management.** Night lighting will be directed away from natural lands within potential MSHCP conservation areas in order to support potential linkage and core functions during construction. This is intended to protect species within potential MSHCP conservation areas from direct night lighting during construction if activities occur at night. The MSHCP requires that shielding be incorporated in project designs to ensure ambient lighting in MSHCP conservation areas is not increased (MSHCP Volume I, Section 6.1.4). For this Project, there are no proposed modifications to existing signals or proposed new signals.	Sections 2.4.4 and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**TE-1 (NES BIO-29) Insect Measures.** The planting of milkweed (for monarch) and nectar sources (for monarch and Crotch bumble bee) is not recommended within the LOD, as this may attract these species to an area where the potential for collision with vehicles is high. To protect monarch, Crotch bumble bee, and other pollinators, the following measures are to be implemented: • Avoid the planting of milkweed (for monarch) and nectar sources (for Crotch bumble bee). • Avoid the use of pesticides (i.e., insecticides and herbicides) wherever possible. If pesticides are to be used, conduct applications between March 16 and September 14, when possible. • Screen pesticides for pollinator risk to avoid harmful applications. Bee precaution pesticide ratings can be found here: https://www2.ipm.ucanr.edu/beeprecaution/. • Avoid the use of neonicotinoids or other systematic insecticides, including coated seeds, at any time of year, due to their toxic nature. • Avoid the use of soil fumigants. • Use non-chemical weed control techniques when possible (https://www.cal-ipc.org/resources/library/publications/non-chem/) (Cal-IPC 2020). • If possible, avoid the use of herbicide on blooming flowers. Herbicide use should be conducted on young plant phases, when plants are more responsive to treatment, and when pollinators are less likely to be nectaring on plants.	Section 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	• Use a targeted herbicide approach whenever possible, not large-scale broadcast application. Also, use precautions to limit herbicide drift from wind and discharge from surface water flows. • Do not plant nonnative tropical milkweed *Asclepias curassavica*. This plant species contributes to the spread of the monarch pathogen *Ophryocystis elektroscirrha*, which can be debilitating and/or lethal to monarchs. Remove any detected *Asclepias curassavica*.									
Biology	**TE-2 (NES BIO-21) Temescal Wash – Nesting Season Noise Requirements**. Between March 15 and September 15, all heavy equipment will install and maintain mufflers or other noise-reducing features when working within 300 feet of Temescal Wash. A biological monitor will monitor and log sound levels at the edge of the LOD with the riparian area to ensure noise levels do not result in a disruption to nesting birds (typically over 60 decibels). If construction noise is negatively affecting nesting birds, work will cease (unless authorized by the wildlife agencies) until adequate sound barriers can be constructed to reduce noise levels at the edge of the riparian corridor. It may be most effective to construct noise barriers well prior to March 15 to ensure construction delays do not occur. All noise barriers would need to be constructed within the LOD.	Sections 2.4.4 and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**TE-3 (NES BIO-23). LBV Habitat Compensation.** Because the federally and State-listed as endangered LBV occupies the riparian/riverine areas outside of the LOD at Temescal Wash and associated tributaries proposed for impact, and could potentially occupy the LOD prior to construction, compensation for occupied riparian/riverine habitat shall include approval of an equivalency analysis by RCA and wildlife agencies to ensure any occupied LBV lands affected by construction are replaced with equivalent lands (i.e., mitigation lands are occupied or restored to occupation), should the LOD become occupied prior to construction. Final mitigation ratios will be determined after consultation with RCA and wildlife agencies; however, at least 1:1 mitigation consisting of establishment or re-establishment of occupied lands will occur to ensure no net loss of occupied habitat. Any remaining mitigation may consist of enhancement or restoration. Final approval will occur prior to the start of Project construction, including any ground disturbance work and/or vegetation clearing.	Section 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						Yes
Biology	**TE-4 Stephens' Kangaroo Rat.** To avoid and minimize effects on Stephens' kangaroo rat (*Dipodomys stephensi*; SKR) and associated habitat, RCTC will implement the following: • Payment of the SKR HCP fee. • Monitor and report on compliance with the established take threshold for all SKR habitat associated with the Project. A biological monitor will track and identify SKR habitat that is subject to disturbance. Once the biological monitor has determined that permanent and temporary impacts on SKR habitat has reached 80 percent of the anticipated disturbance (225.58 acres), the biological monitor will map all potential SKR habitat disturbed with a sub-meter global positioning system weekly. • Reports, including geographic information system files, will be submitted to USFWS at the end of every week until ground disturbance has occurred in all planned areas.	Sections 2.4.1 and 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No
Biology	**TE-5. Crotch Bumble Bee.** Crotch Bumble Bee Habitat Assessment. Prior to vegetation removal and/or grading, a Designated Biologist shall conduct a habitat assessment to determine whether Crotch bumble bee habitat is present or absent in the Project site and adjoining area. The habitat assessment shall be performed according to the 2023 CDFW Survey Considerations for Candidate Bumble Bee. If habitat for Crotch bumble bee is present, a Designated Biologist shall conduct focused surveys to determine presence/absence of Crotch bumble bee prior to vegetation removal and/or grading. Survey methodology shall follow the 2023 CDFW Survey Considerations for Candidate Bumble Bee (available at https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=213150). Surveys shall be conducted during the flying season when the species is most likely to be detected above ground, between March 1 to September 1, by an approved Designated Biologist familiar with Crotch bumble bee behavior and life history. Surveys shall be conducted within the Project site and areas adjacent to the Project site where suitable habitat exists. Survey results including negative findings shall be submitted to CDFW at least 30 days prior to Project-related vegetation removal and/or ground-disturbing activities. If the species is identified on site, Caltrans shall fully avoid the species absent take authorization. If the Project may result in take of Crotch bumble bee through either nest destruction or destruction of potential nests	Section 2.4.5, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
	hidden in bunch grasses or other nesting habitat, or if complete avoidance of Crotch bumble bee cannot be achieved, Caltrans shall obtain appropriate CESA authorization (i.e., a finalized CESA ITP under Fish and Game Code section 2081) prior to initiation of Project activities.									
Other	**GHG-1:** The contractor must comply with SCAQMD's rules, ordinances, and regulations regarding air quality restrictions.	Section 3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-4:** The Project will maintain equipment in proper tune and working condition.	Section 3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes
Other	**GHG-5:** Use water-efficient technologies for landscaping.	Section 3.4, EIR/EA	Yes	RCTC, Resident Engineer, Contractor						Yes

POST-CONSTRUCTION

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Air Quality	**AQ-6.** RCTC provides vanpool subsidies through a component of the VanClub program (vanclub.net). Currently, these vanpool subsidies cease in 2029. For this Project, RCTC will fund and administer the vanpool subsidies with $15 million for an additional 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents. To further support vanpool adoption in Riverside County, RCTC Commuter Assistance will implement an Incremental Vanpool Subsidy Program. This initiative would supplement existing subsidies provided by the Los Angeles County Metropolitan Transportation Authority, Orange County Transit Authority, San Diego Association of Governments, and San Bernardino County Transportation Authority, further reducing costs for Riverside County residents.	Sections 2.2.1, 3.1.3, 3.1.8, 3.1.11, 3.1.21, and 3.3.3, EIR/EA	Yes	RCTC						Yes
Air Quality	**AQ-7.** RCTC will provide $12 million dollars to administer the IE Commuter, a rideshare program, over a 5-year period starting in 2030 (the Project's Opening Year), which will be available to Riverside County residents. To deliver the program, RCTC will manage contracts for administration, outreach, and technical services.	Sections 2.2.1, 3.1.3, 3.1.8, 3.1.11, 3.1.21, and 3.3.3, EIR/EA	Yes	RCTC						Yes

Category	Task and Brief Description	Source	Included in PS&E package	Responsible Branch/Staff	Action to Comply	Due Date	Task Completed by	Task Completed on	Remarks	Mitigation for significant impacts under CEQA?
Air Quality	**AQ-8.** To accommodate growing commuter demand and support mode shift in the Inland Empire, RCTC Commuter Assistance will extend existing park and ride leases beyond their current expiration in 2029 and expand the network. RCTC will oversee this effort, which is established by three-party lease agreements between property owners, Caltrans, and RCTC. The agency is committed to maintaining and expanding this vital infrastructure through 2035, with a total investment of $300,000. The number of additional leased spaces is subject to ongoing lease negotiations and property availability. RCTC is committing $300,000 to secure 94 additional spaces based on 2025 property valuations. The actual number of spaces secured by 2029 may vary depending on lease terms, site conditions, and market rates at the time of implementation.	Sections 2.2.1, 3.1.3, 3.1.8, 3.1.11, 3.1.21, and 3.3.3, EIR/EA	Yes	RCTC						Yes
Biology	**NC-10 (NES BIO-10) Revegetation.** Post-construction, any temporarily disturbed areas remaining as bare ground will be hydro-seeded with a Caltrans-approved seed mix. This measure will comply with Avoidance and Minimization Measure **NC-7 (NES BIO-7)**, Exotic Species.	Sections 2.4.1, 2.4.5, and 2.4.6, EIR/EA	Yes	RCTC, Project Biologist, Caltrans District 8 Landscape Architect, Caltrans District 8 Biologist, Resident Engineer, Contractor						No
Biology	**AS-4 (NES BIO-27) Bat Roosting Habitat.** All structures on bridges and/or culverts supporting bat roosting habitat will be returned to original or better condition at the completion of construction, where feasible. Where this is not feasible, permanent loss of such habitat will be mitigated through creation of suitable roosting habitat at no less than a 1:1 ratio. This shall be coordinated with CDFW. If trees with the potential to provide roost sites for solitary bats are removed as determined by the qualified bat biologist (i.e., fan palms, riparian trees), trees will be replaced with equivalent or better at the completion of construction.	Section 2.4.4, EIR/EA	Yes	RCTC, Project Biologist, Resident Engineer, Contractor						No

Appendix E List of Technical Studies

The technical studies listed below were used in preparation of this Environmental Impact Report/Environmental Assessment.

- Aerially Deposited Lead Analysis (January 2020)
- Air Quality Assessment Report (August 2022)
- Air Quality Conformity Report (May 2025)
- Archaeological Survey Report (March 2023)
- Community Impact Assessment (July 2024)
- Determination of Biologically or Equivalent Superior Preservation Report (2025)
- District Preliminary Geologic Study (February 2023)
- Project Report (October 2025)
- Errata for Value Engineering Revisions for the I-15 Express Lanes Project – Southern Extension (December 2022)
- Finding of Effect (March 2023)
- Historic Property Survey Report (March 2023)
- Historical Resources Evaluation Report (March 2023)
- Phase I Initial Site Assessment (December 2021)
- Phase I Initial Site Assessment Update Memorandum (July 2025)
- Jurisdictional Delineation (September 2021)
- Limited Asbestos and Lead Chip Assessment (May 2020)
- Location Hydraulic Study (January 2023)
- Natural Environment Study (October 2023)
- Noise Abatement Decision Report (June 2024)
- Noise Study Report (May 2024)

- Paleontological Identification Report and Paleontological Evaluation Report (January 2022)
- Preliminary Drainage Report (August 2021)
- Traffic Operations Analysis Report (April 2022)
- Vehicle Miles Traveled (VMT) Analysis Memorandum (February 2021)
- Visual Impact Assessment (May 2024)
- Water Quality Assessment Report (December 2021)
- Rapid Assessment of Stream Crossings (January 2022)

Appendix F Traffic Operations Policy Directive (TOPD) 23-01 Memorandum

FEHR PEERS

Memorandum

Date: October 2, 2024

To: HDR Engineering, Inc.
Riverside County Transportation Commission (RCTC)
Caltrans District 8

From: Jason D. Pack, P.E.

Subject: Traffic Operations Policy Directive (TOPD) 23-01 Discussion for the I-15 Express Lanes Project Southern Extension (ELPSE) PA&ED (EA 0J0820)

The traffic analysis for the I-15 ELPSE project began in the fall of 2019. Since that time, a variety of forecasting has occurred for the project in support of the environmental analysis. Traffic counts were collected in the fall of 2019, right before the COVID-19 Pandemic occurred and affected travel patterns in the state. In 2020, Caltrans released TOPD 20-04 which validated use of pre-pandemic counts in technical analysis on the state highway system. The Traffic Operations Analysis Report (TOAR) was approved in February of 2021, but several subsequent updates occurred for the following year as the Geometric Approval Drawings (GADs) were refined and modifications were made to the project. The final TOAR was stamped by me in April of 2022.

Since that time, Caltrans has released TOPD 23-01 which supersedes TOPD 20-04. This memorandum documents how the Project assessment is consistent with that directive.

Background

The transportation Methodologies and Assumptions Memorandum was approved by Caltrans on October 29, 2019, which allowed travel demand forecasting to begin in support of the Volumes Report and the subsequent TOAR. The Volumes Report was approved by Caltrans on April 30, 2020, and the first TOAR was approved on February 22, 2021. It should be noted that several subsequent revisions to the TOAR occurred between over the next year as small geometric revisions were investigated as the GADs were being finalized.

The Table below from the TOAR documents key dates related to the TOAR submittals and approvals by Caltrans.

Deliverables Reference and Tracking:

Deliverable	Revisions	Date
Previous Caltrans – Approved Submittals		
Final Methodologies and Assumptions Report	-	September 25, 2019
Methodologies and Assumptions Report – Approved by Caltrans	-	October 29, 2019
Final Volumes Report	-	March 18, 2020
Volumes Report – Approved by Caltrans	-	April 30, 2020
Traffic Operations Analysis Report (TOAR) – Approved by Caltrans	-	February 22, 2021
Traffic Operations Analysis Report (TOAR) Submittals		
Draft TOAR	-	August 19, 2020
Draft TOAR	Responding to Caltrans comments on August TOAR	October 14, 2020
Draft TOAR	Adding additional access variations tested in Chapter 4	December 10, 2020
Draft TOAR	Revisions to the northbound Dos Lagos/Weirick Road & Cajalco Road express lane access design	January 7, 2021

Deliverables Reference and Tracking:

Deliverable	Revisions	Date
Final TOAR- Approved by Caltrans February 22, 2021	Revision to the lane widths at the northbound Dos Lagos/Weirick Road & Cajalco Road express lane access	February 10, 2021
TOAR Update to incorporate I-15 Corridor Operations Project (COP) Programming (EA 0J0830) Memorandum	Revision to include I-15 COP in the ELPSE No-Build Alternative. Revisions to the Build Alternative southbound I-15 Cajalco Road/Weirick Road express lane weave zone access to meet TOPD design requirements related to spacing needed to negotiate weaving maneuvers on the freeway.	March 15, 2021
Comments for the TOAR Update Memorandum were received.	Both the No-Build and the Build Alternative scenarios required updates. The project team decided that the changes should be reflected in the TOAR (not a separate memorandum). This would ensure that the approved I-15 ELPSE TOAR would be a complete standalone document containing the Build Alternative moving forward.	April 14, 2021

Deliverables Reference and Tracking:

Deliverable	Revisions	Date
Draft TOAR	Southbound I-15 Interim Corridor Operations Project (ICOP) auxiliary lane and I-15 Corridor Operations Project (COP) trap lane between the Cajalco Road Loop On-Ramp and Weirick Road Off-Ramp in Opening Year and Design Year No-Build scenarios	November 12, 2021
	Dual Lane exit at the Weirick Road Off-Ramp under the Build scenarios	
	Update geometrics of southbound express lane access between Cajalco Road and Weirick Road to meet design requirements.	
Comments on the TOAR were received	Request for clarification on why the No-Build and Build Alternatives are being updated.	December 10, 2021
Draft TOAR	Added History for I-15 ELPSE Traffic Operations Analysis Report	January 18, 2022
Draft TOAR – Approved April 07, 2022	Minor text edits Remove highlighted text.	February 17, 2022
Final TOAR	Stamped	April 11, 2022

Traffic counts for the ELPSE project were collected in the Fall of 2019 around the same time the Methodologies and Assumptions Memo was approved and when the Volumes Report was being prepared. It should be noted that California Environmental Quality Act (CEQA) typically set the environmental baseline for a project as when technical studies begin or when the Notice of Preparation (NOP) was issued. The NOP for the project is dated October 11, 2019, and the environmental baseline is consistent with when traffic counts were collected for the project.

While the TOAR was being completed, Caltrans released TOPD 20-04 which provided guidance related to data collection during the COVID pandemic when traffic patterns significantly changed. Specifically, new counts during this time were not desirable and TOPD 20-04 suggested that new counts should not be collected while traffic patterns were affected by the pandemic.

TOPD 23.01 Discussion

TOPD 23-01 provides a variety of guidance in how Caltrans data collection should occur during the COVID pandemic and during the recovery phase from the pandemic. Key excerpts are noted below:

- ***Due to the potential abnormal traffic patterns created by the COVID-19 pandemic, traffic analyses conducted for all projects on the State Highway System (SHS) shall not use traffic data collected between March 13th, 2020 and January 31st, 2022.*** *For areas with lasting pandemic impacts, historical data may continue to be used. Traffic analysis and data usage should be subject to sound traffic engineering judgement and justification with source documentation of historical traffic data….Traffic data older than three (3) years may be refreshed by forecasting methods such as the regional travel demand model.*

- *All projects that conducted traffic analysis, not using traffic count data prior to March 13, 2020, including projects submitted by others through the LD-IGR program are affected. To provide valid traffic analysis during this time, traffic count data should be less than three years old. Pre-COVID-19 traffic data collected prior to March 2020 should be used as the baseline during the short-term interim (e.g., next two years). Historical traffic data gathered from past projects and partner agencies may be used to supplement and/or replace "existing" COVID-19 pandemic period traffic counts, subject to sound engineering justification and source documentation of historical traffic data.*

- *For the use of any traffic data that is older than three (3) years, it is recommended to use Regional Travel Demand Model to forecast the traffic data to the current year with some adjustment factors based on observed traffic patterns using PeMS and current land use. If counts at the needed location are not available, current counts should be gathered from the needed location and from a representative location where prior counts are available. The current counts from the needed location can then be adjusted to more accurately reflect*

assumed post-COVID conditions. Traffic consultants and local agencies should also follow these recommendations for Capital Oversight and LD-IGR program projects.

The I-15 ELPSE Project is consistent with this TOPD guidance. Specifically:

- Counts were collected prior to the COVID pandemic.
- The PA&ED circulation is occurring within the "two-year" window Caltrans identifies above (second bullet) which would allow the pre-Covid traffic counts to be utilized through 2025.
- The regional travel demand model has been used to forecast the Opening Year (2030) and Design Year (2050) traffic volumes and ***those horizons have not changed*** during the process.

Given the above information, new traffic counts are not needed, appropriate, or required to inform technical studies needed for the environmental document.

Appendix G Noise Survey Memo

Memorandum

Date:	May 9, 2025
To:	Olufemi Odufalu, PE, Senior Transportation Engineer, Environmental Engineering, Caltrans District 8
From:	Jeff Dietzler, Capital Projects Manager (Toll), RCTC
CC:	Daniel Ciacchella, PE, Project Manager, Caltrans District 8
Subject:	**NOISE BARRIER BENEFITTED RECEPTOR SURVEY RESULTS FOR THE I-15 EXPRESS LANES PROJECT – SOUTHERN EXTENSION (ELPSE) – EA 08-0J0820**

Title 23, Part 772 of the Code of Federal Regulations (23CFR772), "Procedures for Abatement of Highway Traffic Noise and Construction Noise," outlines procedures for noise studies that are required for approval of Federal-aid highway projects. The Federal Highway Administration (FHWA) requires that State highway agencies prepare state-specific policies and procedures for applying the regulation in their state. The Caltrans Traffic Noise Analysis Protocol for New Highway Construction, Reconstruction, and Retrofit Barrier Projects (Protocol) presents Caltrans policies and procedures for applying 23CFR772 in California.

As defined in 23CFR772.5 traffic noise impacts occur when the predicted noise level under design year build conditions approaches or exceeds the Noise Abatement Criteria (NAC) specified in 23CFR772, or when the predicted noise level substantially exceeds the existing noise level. If a traffic noise impact is predicted to occur noise abatement must be considered and evaluated for feasibility and reasonableness.

The Protocol identifies factors that are used to determine the feasibility and reasonableness of noise abatement. Noise abatement is considered to be feasible if it is predicted to provide at least 5 dB of noise reduction at one or more impacted receptors. The overall reasonableness of noise abatement is determined by the following three factors:

- Achieving a noise reduction design goal.
- Achieving an acceptable cost versus benefit.
- The viewpoints of receptors that benefit from the project (i.e. acceptance of the abatement by benefitted receptors as determined by a survey).

Benefitted receptors are defined as those receptors that are predicted to receiving at least 5 dB of noise reduction from the proposed abatement. If more than 50% of the benefited receptors oppose the abatement, the abatement will not be considered reasonable.

When a noise study for a Federal-aid highway project is conducted, the result of the study are summarized in a Noise Study Report (NSR). At the time that the NSR is completed, all of the factors that are used to determine feasibility and reasonableness are reported in the NSR with the exception of the survey of benefitted receptors. The factors (excluding the survey) are summarized in the Noise Abatement Decision Report (NADR). The NSR and NADR are typically completed prior to circulation of the draft environmental document. The survey of benefitted receptors can occur at any time but will typically occur after the

environmental document is certified. The purpose of this memo is to summarize the results of the benefitted receptor survey for the I-15 ELPSE Project (EA 08-0J0820).

The NADR for the project identified two barrier systems that meet all of the non-survey requirements for feasibility and reasonableness. The barrier systems are identified as SW1890A + SW1890B and SW1890A + SW1890C. Since both barrier systems provide noise abatement for the same community (Terrano Apartments at Dos Lagos), only one system would be considered for construction. Additionally, as demonstrated in the table below, barrier system SW1890A + SW1890C met the non-survey requirements for feasibility and reasonableness for a greater number of benefitted receptors for less cost than barrier system SW1890A + SW1890B. As a result, noise barrier benefited receptor survey letters were sent for noise barrier system SW1890A + SW1890C.

Barrier Systems	Preliminary Cost Estimate	Benefitted Receptors	Cost per Benefitted Receptor	Notes
SW1890A + SW1890B	$5,333,000	65	$82,046	Along I-15 NB Mainline Outside Shoulder and along the NB Weirick Road Entrance Ramp Outside Shoulder
SW1890A + SW1890C	$5,234,000	92	$56,891	Along I-15 NB Mainline Outside Shoulder and Adjacent to I-15 NB Weirick Road Entrance Ramp or near the State Right of Way

All benefited receptors for noise barrier system SW1890A + SW1890C were located along the Terrano Apartments at Dos Lagos community. Two letters with voting ballot surveys were sent to the property owner and non-owner occupants (e.g., renters) at benefited receptors to solicit for their feedback to either approve or oppose the proposed noise barrier system with 92 benefitted receptors. In compliance with Caltrans Traffic Noise Analysis Protocol, For owner-occupied dwelling units, the property owner gets one vote. For non-owner-occupied dwelling units, the renter gets 10% of one vote and the owner gets 90% of one vote.

The following is a summary of the surveys conducted for the noise barrier system.

<u>Noise Barrier SW1890A + SW1890C</u>

Number of Benefitted Receptors: 92 (88 apartment rental units and 4 common use areas)
Number of Survey Respondents: 6 (1 owner for entire complex/common use areas and 5 rental occupants/non-owner)
Number of Survey Respondents that Oppose the Barrier: 0
More than 50% Oppose the Barrier (Yes/No): No
Barrier is Reasonable Based on Viewpoints of Benefitted Receptors (Yes/No): Yes

EA 08-0J082 - Interstate-15 (I-15) Express Lanes Project Southern Extension (ELPSE) Noise Barrier Survey Tracking

Receptor Location		Owner Information				Occupant Information				Vote Tally

Subject: Interstate-15 (I-15) Express Lanes Project Southern Extension (ELPSE) Noise Barrier Survey

The purpose of this letter is for the Riverside County Transportation Commission (RCTC) to inform you about the I-15 ELPSE Project and obtain your survey response regarding sound walls that are proposed as part of this project.

RCTC, in cooperation with the California Department of Transportation (Caltrans), District 8, is proposing to construct tolled express lanes within the median of I-15 in Riverside County from State Route 74 (SR-74) (Central Avenue) in the City of Lake Elsinore to El Cerrito Road in the City of Corona. As part of this project, RCTC is considering and evaluating proposed noise barriers (i.e., sound walls) in the vicinity of your property or residence.

In June of 2024, RCTC, in cooperation with Caltrans, completed a noise technical study which determined that traffic noise levels may exceed the noise abatement criteria to the east of the I-15 north of the Weirick Road Interchange after implementation of the project; therefore, noise abatement in the form of sound walls are proposed.

You have received this letter because you own or are the non-owner occupant of a property that might be affected by noise levels associated with the I-15 ELPSE Project, and we are seeking your opinion as to whether you would like a sound wall which would be constructed within Caltrans right of way adjacent to your property. Exhibit 1 (attached) presents where your property is located in relation to the proposed sound walls varying in heights between 10 and 16 feet. The final wall material and design will be approved by Caltrans prior to construction. However, the attached exhibit provides a representation of the anticipated design.

To learn more about the I-15 ELPSE Project, or if you would like to review the draft environmental document, you may use the following methods:

- Review the documents during regular business hours at RCTC, 4080 Lemon Street, 3rd Floor, Riverside CA, (Please provide 48-hour prior advanced notice for any requests).
- Project information, including the draft environmental document, may be downloaded from RCTC's website at: https://www.rctc.org/projects/i15-express-southern-extension/

We prefer that you complete and return the enclosed survey sheet in the provided addressed envelope by mailing it, to assure formal and timely receipt of your response. Alternatively, you may email your response to Gustavo Quintero (gquintero@bec-riv.org). In either case, please note that for your vote to be counted, the survey sheet must be completed, signed, and received by no later than April 7, 2025.

If you have any questions regarding the noise barrier survey or the draft environmental document, please contact Jeff Dietzler, Capital Projects Manager (Tolling), at JDietzler@RCTC.org or 951.787.4019.

Sincerely,

Jeff Dietzler

Proposed Sound Walls No. 1890A and 1890C Survey Sheet
For Property Owners and Non-Owner Occupants along I-15 ELPSE alignment

Please complete this survey and mail to:
Riverside County Transportation Commission
PO Box 12008
Riverside, CA, 92502-2208
Attn: Jeff Dietzler, Capital Projects Manager (Tolling)

To be counted, the survey sheet must be signed and postmarked by no later than April 7, 2025

This sound wall survey sheet is for the proposed sound wall system (SW1890A + SW1890C) consisting of two segments of sound wall. The first segment (SW1890A) would be constructed along the outside edge of shoulder on the northbound (NB) side of I-15 between the Weirick Road NB Off- and NB On- ramps. The second segment of sound wall would be constructed partially along the outside edge of shoulder of the Weirick Road NB On-Ramp and then adjacent to the freeway right-of-way fence line (SW1890C). Please see the attached figure for reference and complete and sign the following form and return via mail.

__✓__ Yes, I am in favor of the proposed sound wall system (SW1890A + SW1890C) as shown in the attached figure at barrier heights between 10 and 16 feet.

_____ No, I am not in favor of the proposed sound wall system described above.

SUBJECT: Project Level Conformity Determination for the Interstate 15 Express Lanes Project Southern Extension (ELPSE) (FTIP ID# RIV170901, RTP ID# 3160001, and CTIPS# 209-4000-4827), EA#08-0J0820, PN 08 18000063

Dear Mr. Odufalu:

On May 20, 2025, the California Department of Transportation (Caltrans) submitted to the Federal Highway Administration (FHWA) a complete request for a project level conformity determination for the Interstate 15 Express Lanes Project Southern Extension. The project is in an area that is designated as extreme nonattainment for the 2008 and 2015 8-hour ozone (O3) standards, serious nonattainment for the 2006 24-hour and 2012 annual particulate matter 2.5 micrometers or less in diameters (PM2.5) standards, maintenance for the 1971 annual and nitrogen dioxide (NO2) standard, serious maintenance for the 1971 8-hour carbon monoxide (CO) standard, and serious maintenance for the 1987 24-hour particulate matter 10 micrometers or less in diameters (PM10) standard.

The project level conformity analysis submitted by Caltrans indicates that the project-level transportation conformity requirements of 40 CFR Part 93 have been met. The project is included in the Southern California Association of Governments (SCAG) current Regional Transportation Plan (RTP) and Transportation Improvement Program (TIP), as amended. The design concept and scope of the preferred alternative have not changed significantly from those assumed in the regional emissions analysis.

As required by 40 CFR 93.116 and 93.123, the localized $PM_{2.5}$ and PM_{10} analyses are included in the documentation. The analyses demonstrate that the project will not create any new violations of the standards or increase the severity or number of existing violations.

Based on the information provided, FHWA finds that the Interstate 15 Express Lanes Project Southern Extension conforms with the State Implementation Plan (SIP) in accordance with 40 CFR Part 93.

If you have any questions pertaining to this conformity finding, please contact Antonio Johnson at (916) 498-5889 or antonio.johnson@dot.gov.

Sincerely,

ANTONIO DESHAWN JOHNSON
