

71/91 INTERCHANGE PROJECT

The Riverside County Transportation Commission, in partnership with Caltrans, has received project approvals and has completed final design for the State Route 71/State Route 91 (71/91) Interchange Project in Corona. RCTC is actively seeking funding to improve this congested and operationally deficient interchange.

The 71/91 Interchange serves as a gateway between Riverside, Orange and San Bernardino Counties and is a vital link for commuters and freight vehicles that travel along State Route 91. The new interchange is designed to reduce congestion, enhance travel reliability, improve traffic safety, and reduce pollutants and emissions.

The project will:

- Replace the existing single-lane loop connector between eastbound 91 and northbound 71 with a new, two-lane, direct connector ramp;
- Build a new, separate eastbound auxiliary lane from Green River Road to east of the 71/91 interchange; and
- Realign the eastbound 91 on-ramp from Green River Road to improve access to the 71/91 interchange.

Once funding is secured, construction could begin in late 2019 and be completed in about three years. RCTC is exploring federal, state, and local sources for funding.

For more project information, visit rctc.org/71-91Interchange.

LOCATION:

State Route 71/State Route 91 Interchange, Corona

CONSTRUCTION:

Dependent upon funding; could begin in late 2019

INVESTMENT:

\$121 million (construction)
