

RIVERSIDE COUNTY TRANSPORTATION COMMISSION

DATE:	December 13, 2000
TO:	Riverside County Transportation Commission
FROM:	Plans and Programs Committee Technical Advisory Committee Stephanie Wiggins, Program Manager
THROUGH:	Eric Haley, Executive Director
SUBJECT:	RCTC's Alameda Corridor-East Trade Corridor Grade Crossing Priority List

PLANS AND PROGRAMS COMMITTEE, TECHNICAL ADVISORY COMMITTEE AND STAFF RECOMMENDATION:

This item is to seek Commission approval of the RCTC Alameda Corridor-East Trade Corridor Grade Crossing Priority List.

BACKGROUND INFORMATION:

As a result of RCTC's involvement in the development of the Corridor Plan for the Alameda Corridor East Steering Committee, a prioritized list of grade crossing improvements along the three main lines (UP Los Angeles Subdivision, UP Yuma Main, and BNSF San Bernardino Subdivision) must be developed. The following jurisdictions, which have public at-grade crossings along the three main lines, were asked last month to submit a "Grade Crossing Prioritization Form": Cities of Banning, Beaumont, Calimesa, Coachella, Corona, Indio, and Riverside, and the County of Riverside.

On Tuesday, November 14th, a meeting was held to review the submitted forms and develop criteria that would form the basis of developing a prioritized tier list. The key factors agreed upon were safety, delay, and availability of alternate grade separations. On Monday, November 20th, the RCTC TAC approved the prioritized tier list subject to technical clean-up (the addition of Airport Road and consideration for calculating total delay along Van Buren (Rutile, Jurupa, Bellegrave, and Clay)). The attached prioritized list incorporates Airport Road however, County staff will continue to work with Parsons Brinckerhoff to better quantify total delay along Van Buren Blvd.

Once approved by the Commission, the list will be forwarded to the Alameda Corridor-East Steering Committee for inclusion in a Corridor Plan that will be used to support a federal earmark in the re-authorization of TEA-21.

Date: November 20, 2000
Subject: Rail Crossing Prioritization Factors

On November 14, RCTC staff and I met with the TAC subcommittee dealing with rail crossing grade separation issues. One of the items discussed was which evaluation factors RCTC should recommend be used in the four-county study to establish grade separation priorities.

Based on our discussions with the subcommittee, the following factors should be recommended by RCTC for use as primary criteria for prioritizing grade separations in the four-county study:

Safety

- Existing accident rates and severity
- Potential for future accidents (due to increases in blockage and delay)

Delay

- Total delay to existing traffic (including train switching and parking)
- Total delay to future traffic

Alternate Crossings

- Availability of alternate grade separations nearby (locations without alternate available crossings should receive higher priority)

In addition, the following factors should be recommended by RCTC for consideration in the four-county prioritization, but should be treated as secondary factors in the prioritization:

- Nearness to residential areas (since grade separation would reduce the noise impacts of train whistles on residential neighborhoods)
- Constructability
- Existing commitments of local funds

RCTC GRADE SEPARATION PRIORITIES

Prioritization Methodology

Factors Used in Prioritization

1999 Average Daily Vehicle Delay

2020 Average Daily Vehicle Delay

Overall Accident Score (combination of frequency and severity)

Adjacent Grade Separations

Local Ranking

Methodology for Measuring

1999 Average Daily Vehicle Delay: 1999 Average Daily Traffic volume and gate down time (through trains only)

2020 Average Daily Vehicle Delay: 2020 Average Daily Traffic volume and gate down time (through trains only)

Overall Accident Score: Accident frequency multiplied by severity (train-involved accidents)

Adjacent Grade Separations: Distance to nearest grade separation.

Local Ranking: local agency ranking of priority.

Rating Points	1999 Average Daily Vehicle Delay	2020 Average Daily Vehicle Delay	Overall Accident Score	Adjacent Grade Separations
5	> 30 veh hrs/day	> 100 veh hrs/day	> 0.20	> 1 mile
4	> 20 veh hrs/day	> 75 veh hrs/day	> 0.15	
3	> 15 veh hrs/day	> 50 veh hrs/day	> 0.10	> 1/2 mile
2	> 10 veh hrs/day	> 25 veh hrs/day	> 0.05	
1	> 5 veh hrs/day	> 10 veh hrs/day	> 0.00	> 1/4 mile
0	< 5 veh hrs/day	< 10 veh hrs/day	0	< 1/4 mile

Rating points for local ranking score were determined using the inverse of the local agency's ranking, factored up so that the highest priority project received 25 points.

Weighting Points

Weighting points were applied to each evaluation factor so that each factor is weighted equally, with a maximum possible score of 500 points. The maximum possible total score is 2,500 points (500 for each factor).

Priority Groupings

The grade crossings were grouped into five priority groupings based on their overall score.
