

Mid County Parkway RAMONA EXPRESSWAY

OVERVIEW:

The Riverside County Transportation Commission (RCTC) is conducting safety and road improvements through a major segment in the County of Riverside. Major roadway improvements will be made on the 8.6 miles of Ramona Expressway from Warren Road to about one mile east of Rider Street. This segment is within the Mid County Parkway, also known as the MCP, a planned 16-mile corridor between Route 79 in the Hemet Valley and Interstate 215 in Perris. Construction will take place from early 2026 to 2028.

The MCP Ramona Expressway has a high rate of vehicular collisions, with 14 fatalities and 17 severe injuries occurring between 2017 and 2022. To address the high priority safety and access needs, roadway improvements will include:

- Two lanes of traffic in each direction
- A raised median
- Construction of a new bridge over the San Jacinto River
- Traffic signal upgrades
- Construction of a wildlife crossing

The new roadway will improve motorist safety, reduce travel times, and expand access to employment and education. The improvements promote transportation equity for this long-underserved area and provide access to multiple modes of travel with connections to Route 79, I-215, and transit facilities that support Metrolink’s 91/Perris Valley Line and Riverside Transit Agency routes.

During construction, motorists should watch for potential daytime, nighttime and weekend closures, lane reductions, and lane reconfigurations.
